Index

addivity and output deflation, 246 aggregate capital stock, 31-68 multiple-factor case, 47-57 general results, 51-7 one-capital, many-labor case, 62-3 constant returns, 57-62 one-output, one-labor model, preliminary findings, 24 terminology explained, xi-xii two-factor case, 33-47 aggregate production functions and mobility of capital, 121-38 terminology, 139-40 validity of concept, 19-26 aggregation background to debate, 1-2 basic principles, 3-6 conditions. 9-10. 122-3 defined, x study of, history, xi-xii, xvii, xx aggregation, approximate and Leontief conditions, 157-71 agriculture and commodity pattern of trade, 272 Cambridge v. Cambridge debates xi, xiiiiv, 122, 136 capital intensity in the aggregate, figure, 265-6 capital aggregates, full/partial, 139-56 and CGCR, 150-2, 153-4 and production functions, 142-50 complementary subaggregates, 144-50

capital aggregation application of Leontief conditions, 158 basic principles, 3-13 and labor/output aggregation, 81, 98 relationship with labor and output aggregations, 14-15 scope of concept, 21-2 simultaneous existence with labor aggregation, 76-7 capital augmentation and Leontief conditions, 167 and technical change, 38-9 terminology explained, xii theorem applied across and within firms, use, 154 capital, fixed question of, 17-19 capital funds fungibility, 122 capital goods, fixed/movable aggregation, 103-18 and CGCR, 114-16 and constant returns, 108-13 model, 104-6 movable factors, 116-18 partial, 112-13 principles, 103-4 effect of mobility, 122 capital mobility, 121-38 model, 123-6 and more than two firms, 131-3 and two firms, 126-31 capital-augmenting technical differences and capital aggregation, 7-8 and capital-altering, 9

capital-generalized constant returns see constant returns, capital-generalized CES see Constant Elasticity of Substitution CGCR see constant returns, capital-generalized co-production and output deflation, output-specific factors, 256-8 Cobb-Douglas production function and capital-augmenting change, 39 experiments, results, table, 223 and Lipschitz condition, 165 terminology explained, xix-xx three factor, use of, 11, 12 and wage predictions, 227 and wages, 174-6, 177, 216-18 experiments and results, 187, 188, 189 in heuristic explanation, 210-11 commodity pattern of trade, 261-75 and factor-price equalization, 266-70 and industry-specific technologies, 263--6 complements and factors of production, 50 Constant Elasticity of Substitution (CES) aggregate, 230-3 distribution parameter, 233-5 experiments, 215-37 computer program information, 236-7 described, 218-21, 224 results, 224-35 log-linear relation, 220 constant returns and aggregate capital stock, one-capital, many labor case, 57-62 two-factor case, and capital-augmenting technical change, 38 and aggregation of capital goods, 108-13 and capital-augmenting technical differences, 7-8 case contrasted with opposite assumption, 63 effect, 121-2 and labor/output aggregation, 15, 77-82 and wages, experiments, subsidiary results, 185 constant returns, capital-generalized (CGCR) and aggregation of capital goods, 114-16 and capital aggregation, 8-9 and full/partial capital aggregates, 150-4 and production function, 41-2 and production possibility frontier, 250

and two-factor case, 44 and vintage production function, 42-4 distribution parameter and CES, 223, 233-5 embodied technology use of terminology, 5-6 embodied technology see also aggregate capital stock; labor/ output aggregation Euler's theorem and aggregation of capital goods, 110 and labor/output aggregation, constant returns, 77 separate aggregation, 92 and one-capital, many labor case, 57-9, 61 and two-factor case, 37, 38 and wages, 178 factor aggregation and mobility of capital, 134-5 factor-price equalization and commodity pattern of trade, 266-70 and Heckscher-Ohlin theorem, 272 Heckscher-Ohlin theorem and commodity-trade patterns, 261-75 commodity-content version, 268 conclusion. 270-2 and factor-price equalization, 266 and trade patterns, 267 Hicks-neutral differences and output aggregation, 135 and Rybczynski theorem, 244, 245 and wages, in experiments and results, 185, 186, 187, 188-9 parameters, 181 regressions, 183 tables, 192-3, 196-7, 204-9 homotheticity and output deflation, 246, 254 output-specific factors and coproduction, 257-8 and production possibility frontier, 249 industry-specific technologies and commodity pattern of trade, 263-6 labor and basic principles of aggregation, 3-6 and Cobb-Douglas production function, 217 intensity in the aggregate, figure, 265-6

reassignment, and Leontief's theorem, 10 - 11and wages, in experiments, 179, 180, 210-11 labor-homothetic production functions see production functions, laborhomothetic labor/output aggregation, 69-102 basic principles and conditions, 13-17 and capital goods, 112 question of movable factors, 117 and constant returns, 77-82 labor employment/output production restrictions, effect of removal, 84-90 mathematical workings, 86-90 and labor-homothetic production functions, 84 and mobility of capital, 135 model, 70-3 preliminary results, 73-5 scope of concept, 21-2 separate aggregation of labor and output, 90-8 simultaneous existence with capital aggregates, 76-7 Leontief (Wassily W.), paradox, 272 Leontief (Wassily W.), theorem and conditions, xiv-xvi and aggregate capital stock, 34-5 multiple-factor case, 48-9 and aggregation of capital goods, 107-8 question of movable factors, 117 and approximations, 157-71 and capital aggregation, 6, 10 effect on independent output ratios and Rybczynski theorem, 242 and effect of removal of labor employment/output production restriction, 86 implications, xvi-xviii labor aggregates, 72, 73 and Lipschitz conditions, 164-8 and mobility of capital, 125 and multiple-factor case, 53-5 and output deflation, 255 proof, xv-xvi and relationship of production function with capital aggregate, 31 and separate aggregation of labor and output, 91, 92 and subaggregates, 90 Lipschitz conditions and Leontief conditions, 164-8 effect on aggregate production function, 21 satisfaction, 159-64

macroeconomics relationship with microeconomics, x multicollinearity and experiments on wages, 185-6 Nataf, Andre theorem, xvii-xviii as exception, 125, 150 nature of, 3-4 and output deflation, 252 and production possibility frontier, 249 proof, xvii-xviii shortcomings, xvii-xix nonconstant returns and labor-homothetic production functions, 82-4 and mobility of capital, 134

output

and basic principles of aggregation, 3–6 output aggregation see labor/output aggregation output deflation homotheticity and addivity, 246 and production functions, output-specific factors and coproduction, 256–8 output-specific factors and sectorspecific factors, 246–56 and Rybczynski theorem, 240 and sector-specific factors, no output-specific factors, 251–6 output ratios, independent, and Rybczynski theorem, 242–6

Paasche approximation and output deflation, 239-40 prices effect on aggregation, 22-4 production functions equation, 14 and full/partial capital aggregates, 142-50 complementary subaggregates, 144-50 and Leontief condition, 167 and output deflation, output-specific factors and coproduction, 256-8 output-specific factors and sectorspecific factors, 246-56 relationship with capital aggregate, 31 three-factor, and full/partial capital aggregates, 140-2 uses, 4, 25-6

production functions, labor-homothetic and effect of removal of labor employment/output production restriction, 88-9 and nonconstant returns, 82-4 and separate aggregation of labor and output, 91 production possibility frontier (PPF) see production-theoretic deflator, production-theoretic deflator of national output, 239-60 formal statement, 241 Rybczynski theorem defined, 244 effects, 244-5 and sector-specific factors, no outputspecific factors, 251 and independent output ratios, 242--6 and output deflation, 240 output-specific factors and coproduction, 258 specialization limitations of labor and output aggregations, 16 specialization cases and effect of removal of labor

employment/output production restriction, 88–9 in experiments on wages, 187 Stolper-Samuelson theorem, 244 subaggregates, 16–17 existence, 90 formation, 94 superaggregation formation, 57–63 technical change and capital augmentation, 38–9 and labor/output aggregates, 81 technology, embodied use of terminology, 5–6 technology, embodied *see also* aggregate capital stock; labor/ output aggregation trade *see* commodity pattern of trade

vintage production functions and aggregate capital stock, 40–1, 46 and capital-altering changes, 45 terminology explained, xii use, 33

wages, 173-214 and CES experiments, 226-30 and Cobb-Douglas production function. 174-6, 177, 216-18 experiments and results, 187, 188, 189 in heuristic explanation, 210-11 experiments and results, 179-212 capital, 180-1, 187, 188-9, 198-203 summaries, 190-1, 194-5 heuristic explanation, 189, 210-12 Hicks, 185, 186, 187, 188-9 parameters, 181 regressions, 183 tables, 192-3, 196-7, 204-9 regressions and measures of performance, 182-4 limitations of received opinion, 175-6 model, 176-8
