
Subject Index

- ALCOVE, 67
- Artificial intelligence models of concepts, 193–196
- Base-rate neglect in category learning, 115–118
- Basic level of categorization, 200, 210–223
- in children's concepts, 327–331
 - differentiation explanation of, 218–223
 - in nonobjects, 228–229
 - in word meaning, 397–398
- Baywatch model, 186–187
- Blank predicates, 182, 245–246
- Category-based induction, 180–182, 243–269
- by children, 371–375
- Category construction, 126–134
- and knowledge, 171–173
- Category production, 23
- Category use, 134–140
- Category validity, 214
- Central tendency, 35
- Children's concepts
- vs. adults' concepts, 337–340
 - domain specificity of, 370–371
 - perceptual vs. conceptual accounts, 380–382
- Classical view of concepts, 15–40, 73
- revisions of, 24ff
- Cognitive economy, 204
- Cognitive reference point, 24
- Collections vs. classes, 332
- Concept*, vs. *category*, 5
- Concept specialization model of conceptual combination, 453–455
- criticisms of, 455–459
- Conceptual combination, 443–475
- conjunctive and disjunctive concepts, 464–468
 - feature-verification studies, 459–461
- Conceptual development, 317–383
- Configural cue model, 46
- Conjunction effect in conceptual combination, 446
- Conjunctive and disjunctive concepts, 149
- Core and identification procedures, 24
- Cue validity, 213–216
- Cultural influences on concepts, 481–483
- Definitions, 11
- problems with, 17, 25–28
- Dishabituation technique (in infants), 273–279
- Domain specificity in children's concepts, 370–371
- Dot pattern categories, 28–30
- Elbonics, 389
- Essentialism, 366–369
- Exemplar, definition of, 58–60
- Exemplar effects, 75–94
- in categorization, 80–85
 - in learning, 76–80
- Exemplar models, tests of, 94–112

- Exemplar view, 49–58
 evaluation of, 484–486, 490–491
 explanation of conceptual development, 377–379
 explanation of exemplar effects, 88–91
 explanation of hierarchical structure and the basic level, 237–240
 explanation of infant concepts, 312–313
- Expertise and levels of categorization, 229–233
- Explanation-based learning (EBL), 193–195
- Family resemblance, 32–35, 42–43
- Fast mapping, 354–356
- Feature combinations, 45–46, 118–126
- Gamma (GCM parameter), 70
 “Gavagai,” 341–346
- Generalized Context Model (GCM), 65–71, 112
- Goal-derived categories, 62–63
- Hierarchical organization, 199–210
 in children’s concepts, 323–327
 definition of, 200–202
- Hyperspace Analogue to Language (HAL), 425–430
- Ideals, 35–38
- Implicit memory explanation of exemplar effects, 86–88
- Inclusion fallacy, 208
- Indeterminacy of translation, 344–345
- Induction. *See also* Category-based induction
 and category construction, 131–132
- Infant concepts, 271–315
 basic categorization abilities, 284–298
 domain of, 283–284
 global categories, 293–304
 methodology of, 272–283
 perceptual vs. conceptual, 295–302
- Intransitivity of category judgments, 26–27, 44–45, 207–209
- IS-A links, 200–202
- Knowledge approach, 60–64
 evaluation of, 487
 explanation of the basic level, 240–241
 explanation of conceptual development, 379–383
 explanation of exemplar effects, 93–94
 explanation of infant concepts, 313–314
- Knowledge effects, 141–197
 in categorization, 164–173
 in category acquisition, 147–164
 in children’s concepts, 356–371
 in feature construction, 174–180
 in induction, 180–182
 interactions with category structure, 158–161
- Latent Semantic Analysis (LSA), 426–430
- Linear separability as a constraint on concepts, 96–101
- Linguistic determinism, 431–435
- Luce choice rule, 69
- Mass vs. count nouns, 225–227
- Models of categorization, 478–479
- Necessity, 12
- Overextensions in word meaning, 402
- Perception, effects of concepts on, 479–481
- Perceptual codes, 479–481
- Piagetian views of concepts, 271–272, 318–323
- Polysemy, 404–413
- Post-Hoc model, 194–195
- Prestored vs. computed category relations, 206
- Probability matching, 70
- Property mapping in conceptual combination, 456–457
- Prototype, 28–31
- Prototype view, 41–48
 evaluation of, 486–487
 explanation of the basic level, 235–237
 explanation of conceptual development, 377–379

- explanation of exemplar effects, 91–93
 - explanation of infant concepts, 312–313
- Sapir-Whorf hypothesis, 431–435
- Schemata, 47–48
- Selective modification model of conceptual combination, 446–453
- Sequential touching technique (in infants), 279–281
- Shape bias in word learning, 347–350
- Similarity, 481
- Similarity-based learning (SBL), 193
- Subordinate categories, 200, 223–225
 - in children’s concepts, 331–332
- Sufficiency, 12
- Summary representation, 42
- Superordinate categories, 200, 225–228
 - in children’s concepts, 332–336
- Taxonomic bias in word learning, 346–347
- Taxonomic concepts, 319
- Thematic vs. taxonomic concepts, 319–323
- Theory view, 61. *See also* Knowledge approach
- Typicality, 22ff
 - causes of, 31
 - in children’s concepts, 336–340
 - effects on categorization, 23, 207
 - effects on learning, 23
 - effects on word meaning, 395
- Underextensions in word meaning, 402
- Unidimensional sorting, 127
- Unsupervised learning, 126
- Word learning, 340–356
 - biases, 346–350
 - and conceptual approach to word meaning, 399–404
 - parental input, 350–352
 - syntactic constraints, 352–354
- Word meaning, 385–441
 - associative-computational models of, 422–431
 - category effects in, 394
 - conceptual approach to, 388–399, 436–439
 - different conceptions of in cognitive science, 386–388
 - elaboration of, 404–413
 - modulation of, 413–422
