

## Index

- Abelian group, 521, 526  
Absolute value, 190  
Accumulation, point of, 196  
Adjoint differential form, 157, 167  
Adjoint operator, 403  
Adjoint space, 397  
Algebra, 524; Boolean, 91, 92;  
  fundamental theorem of, 195–196;  
  homological, 519–520; normed, 516  
Almost all, 479  
Almost continuous, 460  
Almost equal, 479  
Almost everywhere, 70  
Almost linear equation, 321, 323  
Alternating differential form, 185;  
  differential operations for, 159–165;  
  theory of, vi, 143  
Alternative theorem, 296, 413  
Analysis, v, 1; axiomatic method in,  
  512–518; complex, vi; functional,  
  391; harmonic, 518; and number  
  theory, 500–501  
Analytic function, defined by function  
  element, 242  
Analytic number theory, 480  
Analytic operation, 468  
Analytic set, 448, 458, 465, 468, 469;  
  linear, 466  
Angle-preserving transformation, 194  
 $a$ -points, of function, 225  
Approximately equal, 479  
Approximation, best, 496;  
  Diophantine, 495, 497  
*A priori* estimate, 339  
Arc, 125; smooth, 127  
Arc-length, 128  
ARTIN, E., 510  
ARZELA theorem, 410, 435, 437  
A-set. *See* Analytic set  
Asymptotically equal, 479  
Atlas, 231; of holomorphically related  
  charts, 245  
Atomic theory, 415  
Automorphism group, 510, 511  
Axiomatic method, in geometry, 507–508  
BAIRE classes, 460; first, 460, 462, 463;  
  of functions, 448  
BAIRE condition, 464  
BAIRE function, 464, 473; non-, 474  
BAIRE space, 464  
BAIRE system, of functions, 459, 460  
BAIRE theorem, 448, 460, 462  
BANACH, S., 516  
BANACH fixed point theorem, 423  
BANACH space, 338, 340, 393, 399, 432,  
  435, 437, 516; adjoint, 400;  
  conjugate, 400; dual, 400; theory of, vi  
BANACH theorem, 446, 447  
Band spectra, 418  
BAYES theorem, 109  
BELTRAMI differential equation, 325  
BERNOULLI, DANIEL, 23  
BERNOULLI, JACOB, 89, 360  
BERNOULLI, JOHANN, 23  
BERNOULLI distribution, 96  
BERNOULLI law, of large numbers, 116  
BERNOULLI numbers, 360, 362  
BERNOULLI polynomials, 360, 362n  
BERTRAND-ČEBYŠEV theorem, for  
  primes, 483  
BESSEL differential equation, 313  
BESSEL inequality, 398  
Bicompactification, 257  
BIEBERBACH, L., 274, 321  
BIEBERBACH closure, 274

- Bilateral, 132  
 Bilinear form, bounded, 402  
 Binomial distribution, 96  
 BOHR-LANDAUI theorem, 486, 487  
 BOLTZMANN, L., 89  
 BOLZANO theorem, 447  
 Boolean algebra, 91, 92  
 BOREL, F. E. E., 499, 500  
 BOREL-CANTELLI theorem, 119  
 BOREL measurable function, 93, 101, 111, 474n  
 BOREL set, 93, 110, 448, 458, 464, 465, 469; projection of, 470  
 BOREL system, 458  
 BOUND, least upper and greatest lower, 55n  
 Boundary condition, 308  
 Boundary point, 125  
 Boundary value problem, 294, 314, 336; for elliptic differential equations, 337; first, 295; second, 295n; third, 295n  
 Bounded, 402  
 Bounded convergence, 104  
 Bounded variation, function of, 65  
 BOURBAKI, N., v, vi, 67, 78n, 506, 521, 522, 525, 527  
 Branching case for integral equations, 440n, 442  
 BRIGGS, 494  
 BROUWER fixed point theorem, 303, 432, 433  
 B-set. *See* BOREL set  
  
 CAHEN, 501  
 Calculus, of alternating differentials, 154; of differential forms, 125; of residues, 348; theorems of infinitesimal, 136; of variations, 349, 422  
 CANTOR, GEORG, 508, 513  
 CANTOR intersection theorem, 451n  
 CANTOR set, 447, 450  
 CANTOR theory, of sets, 513  
 CARATHÉODORY, C., 194  
 Cardinal number, 524  
 CARLSON, 487  
 CARMICHAEL conjecture, 503  
 CARTAN, ELIE, 124  
 CARTAN, HENRI, v  
 Cartesian coordinates, 430  
 Cartesian space, 26. 42. 45;  $n$ -dimensional, 49  
 CA-set, 471, 472, 473  
*Casus irreducibilis*, 191  
 Category, 447, first, 451; second, 451  
 Catenary, 422  
 CAUCHY, A. L., 89  
 CAUCHY condition, 2, 396  
 CAUCHY criterion, generalization of, 12  
 CAUCHY filter, 18, 19  
 CAUCHY integral, and power series, 222–223  
 CAUCHY integral representation, 238  
 CAUCHY integral theorem, 207, 217, 220, 223, 224, 236, 237  
 CAUCHY-KOVALEVSKI theorem, 336  
 CAUCHY principal value, 347n, 407  
 CAUCHY remainder formula, 37, 216  
 CAUCHY-RIEMANN differential equations, 204, 205  
 CAUCHY sequence, 396. 424. 425  
 CAUCHY theorem, fundamental, 2, 10–11, 16, 18, 19  
 CAYLEY, A., 509  
 ČEBYŠEV, 89, 497  
 ČEBYŠEV approximation theorem, 497  
 ČEBYŠEV function, 489  
 ČEBYŠEV inequality, 102–103  
 ČEBYŠEV theorem, 484  
 Chain conductor, 353  
 Chain rule, 29, 203, 205; generation of, 44  
 Characteristic curve, 303, 333  
 Characteristic equation, 287, 380  
 Characteristic function, 54n, 107; continuity of, 105; definition of, 103  
 Characteristic initial value problem, 335  
 Characteristic manifold, 309, 311–321, 322, 337, 344  
 Chart, 231; holomorphically related, 232  
 Chordal distance, 263  
 CHOWLA, 494  
 Circle, quadrature of, 491  
 Closed curve, 130  
 Closed form, 161  
 Closed hull, 64n  
 Closed plane, 233; theory of functions on, 229–238  
 Closure, of complex plane, 194; torus-like, 267  
 Codifferentiation, 164  
 Coefficients, undetermined, 280  
 COHEN independence theorem, 475  
 Cohomology, 520  
 Combinatorial topology, 519  
 Compactification, 257, 261, 262, 269; axioms for, 265; concept of, 253; neighborhoods and, 264  
 Compactness, 233  
 Compact support, 68  
 Comparison function, 294  
 Comparison theorem, 298  
 Compatibility conditions, 522  
 Complement, 91

- Complementary set, 198  
 Complete (content), 76  
 Complete differential, 202  
 Completeness, 11, 19; property of, 2  
 Complete set function, 63  
 Complex analysis, vi  
 Complex manifold, 272  
 Complex number, 188; fundamental laws for, 189; Gauss representation of, 192; relation to elementary geometry, 191–195  
 Composition, 514; outer, 524; of subsets, 17  
 Cone, 322  
 Configuration, 508  
 Conformal mapping, 210, 325  
 Congruence, 189  
 Congruence class, 189  
 Conjugate, 190; harmonic, 211  
 Connectedness, 26  
 Conoid, 322  
 Consistency, 5, 55; amount of, 97  
 Constructibility, questions of, 474  
 Content, 76;  $n$ -dimensional elementary-geometric, 57; Peano-Jordan, 62  
 Content axiom, 63  
 Continuation, analytic, 481; holomorphic, 217; meromorphic, 241  
 Continued fractions, 499  
 Continuity, 23–28, 454; of addition, 6; of characteristic function, 105; concept of, v; definition of, 396; of inverse, 7; of multiplication, 7; of measure, 92; points of, 462; uniform, 410  
 Continuous function, 26; power series as, 34  
 Continuous mapping, 24, 455  
 Continuous spectrum, 413  
 Continuum hypothesis, 448, 475, 476  
 Convergence, v, 3, 10, 12, 427; bounded, 104; concept of, 1, 479; coordinate-wise, 25; maximal, 438; normwise, 71 $n$ ; in probability, 115; radius of, 216; strong, 396; theorem of Peano, 278; uniform, 20–21, 27; weak, 105  
 Convergent sequence, 1, 424; of functions, 33  
 Convex, 32  
 Convolution, 108, 404 $n$   
 Convolution theorem, 404  
 Coordinates, introduction of, 143; Laplace operator in, 177; local, 185; momentum, 416; negative order of, 131; polar, 177; position, 416; positive order of, 131; transformation of, 165–171  
 Cosine function, 41  
 Countable base, 264  
 Countable topology, 264  
 Covering domain, 200  
 CPCA-set, 471  
 ČUDAKOV theorem, 484, 485  
 Curl, 135  
 Curvature, 280  
 Curve, 42; characteristic, 303, 333; closed, 130; definition of, 22; parabolic, 325; piecewise smooth, 130, 131; simple, 130; simply connected, 131  
 Curvilinear integral, 127, 128, 205, 235  
 Cylinder waves, 313  
 D'ALEMBERT inertia, 410  
 Damping factor, 302  
 DARBOUX integral, 62; lower, 60; upper, 60  
 DARBOUX theorem, 277  
 DAVENPORT, 491  
 DEDEKIND, J. W. R., 508, 512, 513  
 Definite integral, vi  
 Definition, domain of, 392  
 Degenerate, 96  
 Delta-function, 79  
 Delta-operations, 466, 468  
 DEMOIVRE equation, 191  
 DEMOIVRE-LAPLACE theorem, 120  
 DENJOY process, 462  
 Dense, nowhere and everywhere, 447  
 Density, 449  
 Dependence, domain of, 309, 311  
 Derivative, 29, 43; higher, 35–38; partial complex, 202  
 DESCARTES, R., 507  
 Determinism, 313  
 Diagonal, 17  
 Diametrical point relation, 194  
 Difference equation, vi, 353; characteristic equation of, 380; general solution of, 385; homogeneous, 379; linear, 379; for phi-function, 358; summation method for, 355–364; theory of, 354  
 Difference quotient, 22, 28, 30–31, 38  
 Differentiability, v, 28–35, 78, 215, 230; total, 45  
 Differentiable function, 39  
 Differentiable manifold, 184–186, 513  
 Differential, basis transformation of, 167; complete, 202; complex, 204; elementary, 154; Fréchet, 419, 421, 423, 439; holomorphic, 234, 245; independent of parameter, 234;

- Differential (continued)  
 meromorphic, 234, 237, 245, 246;  
 of a pole, 235; residue of, 236, 246;  
 of second kind, 237; total, 129, 145,  
 202, 204; of zero, 235
- Differential derivative, 204
- Differential equation, Beltrami, 325;  
 Bessel, 313; Cauchy-Riemann,  
 204–205; direction field of, 278;  
 elliptic, 322, 323, 326, 327, 337, 341  
 eigenvalue problem for, 341;  
 elliptic-parabolic, 325; Euler, 287, 422;  
 exact, 284; explicit, 277, 290–294;  
 of first order, 287; homogeneous,  
 286–287; hyperbolic, 322, 323, 326,  
 343; hyperbolic-parabolic, 325;  
 hyperbolic-parabolic-elliptic, 358;  
 implicit, 277, 282; Laplace, 211;  
 linear, 286, of second order, 289;  
 nonhomogeneous, 286; nonlinear,  
 518; of  $n$ th order, 281; order of, 277;  
 ordinary, 306, 424; parabolic, 322,  
 323, 326, 330; partial, of second  
 order, 306; perturbed, 302;  
 quasilinear, 302, 321; quasilinear  
 system, 326; Riccati, 290;  
 Schrödinger, 417; singular points  
 of, 282; solution of, 276, 278;  
 ultrahyperbolic, 322; uniqueness  
 theorem for, 291
- Differential form, adjoint, 157, 167,  
 170; alternating, 154–159, 185;  
 complex-valued linear, 205;  
 conjugate, 207; in Euclidean plane,  
 176; in Euclidean three-dimensional  
 space, 177; exact, 206; exterior  
 multiplication of, 151; of first degree,  
 145; Grassman ring of, 159;  
 module of, 146; normal form of, 156;  
 of second order, 150, 237
- Differential quotient, 22, 29, 30–31
- Diophantine approximation, 495
- Diophantine equation, 495
- DIRAC delta-function, 79
- DIRAC measure, 83; derivative of, 86
- Directed set, 12, 14
- Direction filter, 15
- DIRICHLET, P. G. L., 23, 497
- DIRICHLET approximation theorem, 497
- DIRICHLET discontinuous factor, 104
- DIRICHLET function, 214, 448, 459
- DIRICHLET series, 489
- DIRICHLET theorem, 479; on prime  
 numbers, 488
- Discontinuity, points of, 463
- Discriminant manifold, 282
- Distance, 11; definition of, 338;  
 Euclidean, 192, 196; notion of, 71
- Distribution, binomial, 96;  
 differentiation of, 84; Gauss, 96;  
 global behavior of, 81; infinitely  
 divisible, 122; marginal, 97;  
 multidimensional normal, 97;  
 normal, 96; partial derivative of, 85;  
 Poisson, 96, 122; probability, 92;  
 Schwartz, 53, 74, 78, 82, 84, 516;  
 theory of, 80–82; uniform, 497
- Distribution function, conditional, 111;  
 cumulative, 94; one-dimensional, 94;  
 of random variable, 95
- Distributive lattice, 90
- Distributive law, 467; dual, 90
- Divergence, 431
- Domain, 261; connected, 199; of  
 definition, 392; of dependence,  
 309–311; fundamental, 392;  
 multivalent, 242; non-*schlicht*, 242;  
 of operators, 524; perturbation, 312;  
 simply connected, 199; star-shaped, 161
- Double points, 130
- DUFFING equation, 434
- Eigenfunction, 296, 341, 410, 411, 414,  
 417, 435
- Eigenvalue, 296, 348, 410, 411, 412, 417,  
 435
- Eigenvalue problem, 515; regular, 341;  
 singular, 341
- EILENBERG, 271
- Elastic body, vibrations of, 307
- Electron, motion of, 417
- Elementary differential, 154
- Elementary function, 67, 214; potential  
 theoretic method of, 249
- Elementary integral, 67
- Eléments de Mathématique*, 506, 521
- Elliptic. *See* Differential equation
- End point, 126
- Energy integral method, 327, 331, 332,  
 334
- Energy operator, 417
- Entire function, 481
- Entourage, 18
- Estimate, *a priori*, 339
- Epsilon-language, 479
- Epsilon-neighborhood, 6
- Equal in the limit, 479
- Equation (*see also* differential  
 equation), almost linear, 321, 323;  
 branching, 443; characteristic, 287,  
 380; potential, 306, 314
- Equivalence class, of number triples,  
 259; of parallel lines, 259
- ERATOSTHENES, sieve of, 483

- ERDÖS, 485, 489  
 Ergodic theorems, 119

 Function, of  $\alpha$ -points, 225; comparison, 294; complex-differentiable, 204; complex-valued, 200; connected with measures, 82; continuous, 26; definition of, 23; differentiable, 39; Dirichlet, 214, 448, 459; domain-continuous, 201; domain of, 200; elementary, 67, 214; entire, 481; exponential, 22, 38–42; extension of, 448; general theory of, 251; harmonic, 211, 318; holomorphic, 207, 232, 240, 246, 250, 257, 271; implicit, 473; influence, 410; inverse, 231n; kernel, 349; lim-closed set of, 459; locally constant, 454; many-valued, 238; as mapping, 215; measurable, 93; meromorphic, 228, 232, 240, 243, 246, 250; minorant (majorant), 328; monotone, 463; negative part of, 55n; nowhere differentiable, 446; perturbation of, 296; positive definite, 304; positive part of, 55n; real-analytic, 215; real-differentiable, 202; reciprocal, 231n; regular, 207; restrictions on, 448; scalar, 26; separated, 297; set, 63, 94; sine, 41; singularity of, 315, 319; stem, 284; step, 54–56, 99; upper-(lower-) semicontinuous, 463; value of, 55n; variance of, 107; variation of, 454n, 456; wave, 416

- Functional, 57; bounded, 396;  
 continuation of, 58; extension of, 58;  
 linear, 56, 392, 393, 397;  
 positive, 58; Riemann extension of, 68  
 Function element, 241  
 Function theory, in the large, 125;  
 in the small, 125, 206, 290  
 Functional analysis, 391  
 Functional dependence, 51  
 Functional equation, 353, 367  
 Functional matrix, 45; rank of, 51  
 Fundamental solution, 315, 316, 317, 356  
 Fundamental theorem of algebra, 195–196  
 Fundamental theorem of CAUCHY, 10  
 Fundamental vibration, 411  
  
 GALOIS, E., 510  
 GALOIS group, 510  
 GALOIS theory, 518  
 Gamma-function, vi, 355, 365–379,  
 500–501; Euler functional equation  
 for, 367; Euler integral representation  
 of, 371–374; Stirling formula for, 371  
 GAUSS, K. F., 89  
 GAUSS complex plane, 255  
 GAUSS distribution, 96  
 GAUSS integral theorem, 176, 181, 334  
 GAUSS-KRONECKER integral, 429, 431–432  
 GAUSS plane, 226, 354, 355; line at  
 infinity in, 253  
 GAUSS representation, of complex  
 numbers, 192  
 GAUSS theorem, 430  
 GEL'FOND, A. O., 517  
 GELLERSTEDT problem, 335  
 General solution, 292  
 Geodesic lines, 422  
 Geometry, absolute, 508; axiomatic  
 method in, 507–508; Euclidean, 507;  
 Riemannian, 170  
 GLEASON, A., 517  
 Global, meaning of, 439  
 Global behavior, of distributions, 81  
 Global properties, 453  
 Global uniformizing parameter, 250  
 GNEDENKO, B. W., 121  
 GÖDEL, 471  
 GÖDEL independence theorem, 475  
 GOLDBACH conjecture, 489, 490  
 GOURSAT, E. J. B., 207  
 Graded ring, 159  
 Gradient, 129  
 GRASSMAN, H., 124  
 GRASSMAN algebra, 159; of alternating  
 differential forms, 154–159; exterior,  
 525  
 GRASSMAN ring, of differential forms, 159  
  
 GREEN formulas, 182, 314, 316  
 GREEN's function, 329, 410, 434;  
 existence of, 317  
 Group, 313, 321, 509, 519; Abelian,  
 521, 526; of automorphisms, 510,  
 511; Lie, 511; with operators, 511;  
 with parameter, 526; topological,  
 4–5, 517, 518  
 G-set, universal, 476  
 Guinea-pig problem, 351–352  
  
 HADAMARD, J., 313, 314, 321  
 HADAMARD method, of descent, 310  
 HARDY, G. H., 498  
 Harmonic analysis, 518  
 Harmonic functions, 211, 318  
 HAUSDORFF axioms, 264, 472  
 HAUSDORFF, separation axiom, 4;  
 space, 2, 4, 245n, 264, 266;  
 connected, 245n; connected compact,  
 272; example of, 6; locally Euclidean,  
 262  
 Heat conduction, equation of, 307, 319  
 HEAVISIDE function  $H$ , 80, 85  
 HEILBRONN, 491  
 HEINE-BOREL theorem, 141, 198, 233n,  
 256, 433, 513  
 HELLY, theorem of, 105–106  
 HELMERT-PEARSON, distribution of, 108  
 HENSEL, L., 501, 519  
 HERMITE, C., 494  
 HERMITE theorem, 494  
 HESSE normal form, 192  
 Hierarchy of structures, 521  
 HILBERT, D., 491, 507, 508, 515, 517, 523  
 HILBERT axioms, 253, 259  
 HILBERT sequence space, 395, 397  
 HILBERT space, 393, 394, 399, 400, 401,  
 405, 412, 515, 516; complete, 397;  
 theory of, vi  
 HILBERT's fifth problem, 517  
 HILBERT's seventh problem, 494  
 HINČIN, 121  
 HINČIN theorem, of continued fractions,  
 499  
 HOHEISEL, 487  
 HÖLDER continuous function, 337  
 HÖLDER theorem, 354, 375–379  
 Holomorphic differential, 234  
 Holomorphic function, 207; in  
 complex plane, 215–226; differential  
 of, 208; local derivative, 234;  
 sequence of, 223  
 Holomorphic part, 229  
 Holomorphy, vi  
 HOPF sigma-process, 275  
 Hull of a set, 450

- HURWITZ polynomial, 300  
 Hyperbolic (*See also* Differential equation), motion, 194; Riemann surface, 250  
 Hypercomplex system, 525  
 Hypertranscendental number, 493  
  
 Ideal, 512  
 Identity theorem, 223, 228, 247  
 Incidence theorem, 259  
 Inclusion, 428, 521  
 Indefinite integral, 87n; of holomorphic function, 208  
 Independence, 98–99  
 Independent SCHWARTZ distribution, 82  
 Indeterminacy, limits of, 8–10  
 Index set, 2  
 Inertia, index of, 322  
 Infimum (greatest lower bound), 55n  
 Infinitely divisible distribution, 122  
 Infinitesimal increment, 44, 45  
 Infinity, line at, 253; plane at, 273; point at, 252, 253–259, 260; neighborhoods of, 230  
 Influence, range of, 309, 311, 322  
 INGHAM, 486  
 Initial conditions, 292  
 Initial data, continuous dependence on, 308  
 Initial point, 126  
 Initial value problem, 343  
 Initial values, propagation of, 313  
 Inner composition, 514  
 Inner-mathematical, 509  
 Integrability condition, 284  
 Integrable form, 161  
 Integral, 53; curvilinear, 127, 178, 235; definite, 57; step, 57; surface, 131, 137, 179; volume, 179  
 Integral curve, 278, 290, 291  
 Integral equation, 292, 341, 514; algebraic, 421, 435; nonlinear, 437–444; of second kind, 410; theory of, vi  
 Integral representation, 220; of functional, 64  
 Integral ring, 224  
 Integrating factor, 285  
 Integration, elementary theory of, 53–66; Lebesgue theory of, 86; methods of, 277–290; Stieltjes, 65  
 Integration and measure, theory of, 77  
 Interior points, 125  
 Interval, 54  
 Inverse, continuity of, 7  
 Isolated, 198, 449  
 Isomorphism, 92  
 Isoperimetric problem, 422  
  
 Iteration, 428, Picard-Lindelöf method, 279  
  
 JENTZSCH theorem, 435  
 JORDAN arc, 201  
 JORDAN content, 62, 63, 66, 76  
 JORDAN curve, 200, 201  
 JORDAN-measurable, 62  
  
 KELLOGG theorem, 339  
 KEPLER, J., 254  
 Kernel, 436; open, 64n; resolvent, 440  
 Kernel function, 349, 438  
 Kernel matrix, 401, 403, 407  
 Kinetic energy, 416  
 KIRCHHOFF law, 353  
 KLEIN, FELIX, 507, 509  
 KOKSMA, J. K., 497  
 KOLMOGOROV, A. N., 89, 118, 121  
 KOLMOGOROV inequality, 114–122

 Projective plane, 259; properties of, 259–262  
 Projective sets, 471  
 Property, descriptive, 447; metric, 447; strong maximum (minimum), 318; topological, 447  
 Quadratic form, 321, 326  
 Quadrature, 284; of circle, 491; elementary problem of, 277  
 Quantum mechanics, 416  
 Quaternions, 511  
 Quaternion function, right-regular, 274  
 Quasilinear, 302, 321, 326  
 Radius, of convergence, 216  
 RADÓ theorem, 275  
 RADÓ-BEHNKE-STEIN-CARTAN theorem, 257  
 Radon measure, 74, 82, 83, 84; derivative of, 86

- Random variable, 93; distribution of, 94;  
   independent, 117, 121;  
   multidimensional, 95; Poisson-  
   distributed, 108; probability  
   distribution of, 112; uniqueness  
   theorem for, 104  
 Range (of a function), 200  
 Range of influence, 309, 311, 322  
 Real-analytic functions, 215  
 Reciprocal, 190; left, of matrix, 406;  
   right, of matrix, 406  
 Recursion, process of, 353  
 Recursive law, 351  
 Recursive sequence, 351–353  
 Reflection, 194  
 Regular solution, 282  
 Relation, transitive, 12  
 Relaxation, 302  
 REMAK, 328  
 Removable-singularity theorem, 274  
 Residue, 224; calculus of, 348  
 Residue class ring, 512  
 Resolvent kernel, 440  
 Restriction, of a function, 448  
 Revolution number, 429, 432  
 RICCATI differential equation, 290  
 RIEMANN, G. F. B., 501, 507  
 RIEMANN conjecture, 486, 487  
 RIEMANN extension, of functional, 68  
 RIEMANN filter basis, 61  
 Riemannian geometry, 170  
 Riemannian manifolds, 125, 126;  
   differential forms on, 184–186;  
   theory of, 124  
 Riemannian metric, 185  
 RIEMANN integrable, 56, 58, 59, 60, 64;  
   improperly, 59n  
 RIEMANN integral,  $v$ , 13, 53, 61, 62,  
   133, 527; content associated with,  
   62–64; definite, 59, 64; indefinite, 59n;  
   rules for, 84; sum-definition of, 60–61  
 RIEMANN lemma, 226, 247  
 RIEMANN mapping theorem, 317  
 RIEMANN-MELLIN inversion formula, 405  
 RIEMANN sphere, 230, 263, 271;  
   Cartesian product of, 273  
 RIEMANN-STIELTJES integral, 101  
 RIEMANN sum, limiting value of, 61  
 RIEMANN surface, 200, 238–241, 263,  
   271, 513; abstract, 245; of algebraic  
   functions, 248; compact, 246;  
   of compact meromorphic function,  
   247; concrete, 245; defined by  
   function element, 242; of hyperbolic  
   type, 250; in the large, 246;  
   meromorphic separability of, 248;  
   oriented, 246; and points at infinity,  
   257; of parabolic type, 250; simply  
   connected, 246, 249; in the small,  
   246; theory of functions on, 243;  
   type of, 250; univalent (schlicht), 239  
 RIEMANN zeta-function, 481, 485  
 RIESZ, F., 65  
 RIESZ space, 56  
 Right reciprocal, of matrix, 406  
 Ring, 511; graded, 159; topological, 4  
 Rotation, 135; surface of, 422  
 Rotation-dilation, of Euclidean plane,  
   189  
 Rotation group, two-parameter, 269  
 ROTH theorem, 492  
  
 Scalar functions, 26  
 Scalar product, 178, 192  
 SCHAUDER, 339  
 SCHAUDER fixed point theorem, 432,  
   435, 437  
*Schlicht*, 239  
 SCHMIDT, E., 442, 515  
 SCHRÖDINGER differential equation, 417  
 SCHUR, I., 300, 301  
 SCHWARTZ, L., 53, 78, 79, 82, 86, 87  
 SCHWARTZ distribution, 53, 74, 78, 84,  
   516; independent, 82  
 SCHWARZ, H. A., 426; alternation  
   method of, 426  
 SCHWARZ inequality, 342, 395, 408  
 SCHWARZ reflection principle, 314  
 SCHWARZ theorem, 427  
 SEBASTIÃO e SILVA, J., 82, 87  
 Second category, 447  
 SELBERG, 489  
 SELBERG theorem, 486  
 Semicontinuity (upper and lower), 464  
 Semigroup, 321, 346, 347  
 Seminorm, 69; defined by abstract  
   measures, 68; in the wider sense, 69n  
 Sense-preserving (and sense-  
   reversing) conformal mapping, 211  
 Separability, 472  
 Separated functions, 297  
 Separated variables, 285  
 Separation axiom, 472  
 Separation of variables, 346  
 Sequence, 2–7; convergence of, 196;  
   Fibonacci, 352, 353; majorizing, 8;  
   minorizing, 8; monotone decreasing, 7;  
   monotone increasing, 7;  
   Moore-Smith, 12–13  
 Sequence of points, limit of, 197  
 Set, analytic, 448, 458n, 465, 466, 468,  
   469; Borel, 458; closed, 198, 261, 450;  
   compact, 198; complementary, 198;  
   coverable, 199; dense, 451;

- Set (continued)  
 dense-in-themselves, 449, 450;  
 everywhere-dense, 451;  $F_\sigma$ , 456;  $F_{\sigma\delta}$ ,  
 470; field of, 63, 76;  $G_\delta$ , 456; hull of,  
 450; larger, 446; lim-closed, 459;  
 module of, 452; nowhere-dense, 451;  
 open, 261, 450, 456; ordered, 521;  
 perfect, 450, 451; plane triadic, 477;  
 projective, 448; richer, 446;  
 sequentially compact, 432; ternary  
 Cantor, 447, 450; theory of, 508;  
 uncountable analytic, 451; well-  
 ordered, 470; zero, 100n
- Set function, 63, 94
- Sheaf theory, 520
- ŠIDLOVSKĀ, 493
- Sieve of ERATOSTHENES, 483
- Sigma-additivity, 76, 77
- Sigma-algebra, 92
- Sigma-field, 76, 77, 92n
- Sigma-finite measure, 77
- Sigma-module, 452
- Sigma-operations, 466, 468
- Simple path, 219
- Simply connected curve, 131
- Sine function, 41
- Singularity function, 315, 319
- Singular solution, 282
- SKEWES number, 488
- Skew field, 511
- Skew-symmetric tensor, 148
- "Smallest complete measure," 77
- $\mathcal{E}$ -measurable, 110n
- Smooth segment, 131
- Solutions, *a priori* estimates for, 329;  
 fundamental, 315, 316, 318, 356;  
 fundamental system of, 288; general,  
 380, 381; linearly independent  
 fundamental, 514; periodic, 302;  
 singular, 282; special, 380; stable,  
 298; trivial, 295
- Solution operator, 316, 346
- Space, 507; adjoint, 397; complex-  
 projective, 273; locally compact,  
 521–522; metric, 11–12, 423, 513;  
 semicompact, 265; sequentially  
 compact, 265; topological, 1, 3, 230,  
 513; uniform, 16–21
- Spectral lines, 417
- Spectrum, 415; of operator, 413
- Spherical waves, 313
- Square-integrable, 399
- Stability, 298; Ljapunov criterion for, 301
- Stable solution, 298
- Standing waves, 417
- Starlike, 334
- Star operator, 159
- Star-shaped domain, 161
- State, 313

- TOEPLITZ theory of linear equations, 515

- Topological field, 4, 6  
 Topological group, 2, 4–5, 517, 518  
 Topological ring, 4  
 Topological space, 1, 3, 230, 513  
 Topological structure, 521  
 Topological vector space, 516  
 Topology, 273, 453; combinatorial, 519; countable, 264; fundamental theorem of, 270; uniform, 28  
 Torus, 267  
 Torus-line, 270  
 Total additivity, 76  
 Total derivative, 22  
 Total differential, 44, 129, 145, 160, 202; of second order, 152  
 Total variation, of function, 65n  
 Transcendental number, 491  
 Transformation, angle-preserving, 194; of coordinates, 143, 165–171; of differentials, 167; circle-preserving, 194; linear-fractional, 192, 194; Möbius circle-preserving, 192; of parameter, 140–143; sense-reversing, 194; transitive group of, 269  
 Triadic set (plane), 477  
 Triangle, 135  
 Triangle inequality, 11, 17, 190  
 Triangulable, 136  
 TRICOMI problem, 335  
 Trivial solution, 295  
 TURÁN, 487  
 Type problem, 250  
  
 Uniform space, 16–21  
 Uniform structure,  $v$ , 2, 17, 18, 71n, 513  
 Uniform topology, 18  
 Uniformization, 250, 473  
 Uniformly distributed, 497; modulo 1, 498  
 Uniformly elliptic, 329  
 Uniqueness, condition, 308; problem, 327  
 Uniqueness theorem, 104, 291, 331, 332, 334; for differential equations, 291; for random variable, 104  
 Upper limit, 8  
 URYSON, 466  
  
 VAN DER WAERDEN, 512, 525  
 Variables, separated, 285; separation of, 346  
 Variance, 102, 107  
 Variation, of a function, positive and negative, 66n  
 Variation, calculus of, 349; of function, 454n, 456; of parameter, 289  
 Vector, contravariant, 144; covariant, 144; field, 129; function, 26; lattice, 56, 58, 59; line-element, 128; product, 178; space, 55n, 80; surface-element, 135  
 Velocity, 43  
 Vibration, of beam, 410; fundamental, 411; of string, 309, 410  
 VIETA rule, 382  
 VINOGRADOV, 484, 491, 498; symbol, 482; theorem, 479  
 VOLTERRA integral equation, 426  
 Volume-integral, 179  
 VON KOCH, 515  
  
 WARING problem, 490  
 Wave equation, 307–313  
 Wave function, 416  
 Wave, cylinder, 313; spherical, 313; standing, 417  
 Weak convergence, 119, 396  
 Wedge, 333  
 WEIERSTRASS approximation theorem, 28, 207, 215, 366; elliptic function, 495  
 WEIERSTRASS-BOLZANO theorem, 256, 261, 264  
 WENNEBERG, 487
