

## Subject Index

- Access consciousness, 37, 53–54, 437n2  
Achromatopsia, 215–217  
Acquaintance, 127–128  
Activation strength hypothesis, 374  
Adverbialism, 131–132  
    philosophy of presence and, 132  
Agency. *See* Causal powers of consciousness  
Agnosia, 375. *See also* Balint's syndrome/  
    simultanagnosia; Prosopagnosia  
    apperceptive, 208, 210  
    associative, 212–213  
Akinetopsia, cerebral, 220–221  
Alien nonhuman consciousness, 178. *See also* Phenomenology, models of nonhuman  
Altered states of consciousness (ASCs), 57–60, 165, 178, 430n6  
    reversible vs. irreversible, 60, 166  
Amnesia, 49–50, 252, 385  
Anesthesia, 55, 314  
Animal consciousness, 55–56. *See also* Dreaming, in animals  
Antirealism about phenomenal consciousness, 140–141  
Apperceptive agnosia, 208, 210  
Arousal, 277  
“Artificial consciousness,” 56–57  
Associative agnosia, 212–213  
Attention  
    consciousness and, 102, 259, 262–263, 267–268, 430n4, 436n2  
    iconic memory and interplay between, 263–265  
    consciousness without, 259–261  
Attentional spotlight, phenomenal vision outside the, 265–267  
Autobiographical memories, 49–50, 188–189  
Autobiographical self, 49  
Automatic behavior(s), 381, 383. *See also* Zombiehood  
    contents of consciousness during, 388–390  
    from a neuropsychological perspective, 397–399  
Automatisms, NREM-sleep, 391–392  
Autooetic consciousness, 50  
Autoscopy, 188  
“Awareness of” surrounding world, 52–53, 126  
Background mechanisms of subjective experience, 57–59  
Balint's syndrome/simultanagnosia, 214, 215, 229–230, 435–436n1  
    hemispatial neglect and, 233–235  
Baseline state of consciousness, 57–60, 165  
Behaviorism, 46  
Binding, 205, 224–225, 227, 237–238, 267–268. *See also under* Dreams  
    bizarreness and, 239–240, 246–249  
    consciousness-related, 201–202  
    defined, 199, 204  
    at different levels of description, 202–204  
    discontinuity as failure of serial, 243–246  
    feature, 213–215  
    location, and the space around us, 228–230  
    part, 213  
    in dreams, 240–242  
    property, 213–215  
    semantic-conceptual, 227–228  
    of spatiotemporal continuity, 220–221  
    stimulus-related, 199–200, 202  
    synchronizing connections and, 273–276  
    temporal, 272–273  
Binding problem, 199, 205, 232, 434–435n2  
    defined, 199, 200, 203  
    nature of, 199  
    in the science of consciousness, 204–205  
Binocular rivalry, 322–323  
Biological epiphenomenalism, 363–364  
Biological function, nature of, 402–404  
Biological realism, xvii–xix, 174, 176  
    alternatives to, 137, 162 (*see also specific theories*)  
    metaphysical basis of, 133–135  
    and reality and place of phenomenal consciousness, 138–140  
Bispectral index (BIS) online, 55

- Bizarreness  
 in dreams, 239–240, 246–249  
 internal vs. contextual, 249–250  
 mechanisms of, 246–248
- Black planet (thought experiment), 117
- Blackouts, 385
- Blind persons, seeing in dreams, 89–90
- Blindsight, 368–369
- Blindtouch, 372
- Body image, 51, 431n4  
 phenomenal, 92–93, 160
- Bohr, Niels, 288
- Bottom-up constraints, 294, 305
- Bottom-up strategy, 307–318
- Brain, discovery of consciousness in, 298–303  
 prospects for, 335–337
- Brain-consciousness problem, 9
- Brain mapping, 298, 344–347. *See also* Models;  
 Multilevel models; Neuroscience methods in  
 the search for consciousness
- Brains-in-a-vat (BIV), 67, 139, 140
- Bridge principles, 12
- Camera's eye perspective. *See* Third-person  
 perspective
- Causal dependence, 22
- Causal network. *See also* Consciousness, explana-  
 tion of, network of biological  
 dimensions of, 18, 19
- Causal powers of consciousness, 363–365, 381
- Censorship, 47
- Center of consciousness, 38–39
- Change blindness (CB), 261–262  
 conflicting interpretations of, 262–263
- Charles Bonnet syndrome, 42, 350
- Closure, principle of, 208
- Coconsciousness, 178
- Cognitive neuroscience, 9  
 philosophy of, 9
- Cognitive neuroscience approach to conscious-  
 ness, 8
- “Cognitive reduction” of consciousness, 102
- Color opponency, 435n1
- Color(s). *See also* Achromatopsia; Dreams, color  
 qualities in  
 mechanisms involved in phenomenal, 217–219  
 as seen in world vs. in brain, 151–154
- Common fate, 207
- Component patterns, 294
- Computationalism, 429n2
- Conscious and unconscious components of cogni-  
 tive system. *See also* Implicit information  
 relations between, 372–376 (*see also* Zombie  
 systems)
- Conscious and unconscious states, 148–151. *See  
 also* Zombies
- Conscious awareness system (CAS), 373
- Conscious creatures, 54–55
- Conscious states, 54–55, 172. *See also* Conscious  
 and unconscious states
- Consciousness. *See also specific topics*  
 absence of, 62–68  
 alien nonhuman, 178  
 alternative names for the word, 438n2  
 basic concepts of, 30–51  
 as biological phenomenon residing within brain,  
 10–11  
 as central junction of information in brain, 382  
 confusing conceptions of, 51–54  
 continuum of, 210–212  
 dimensions of causal-mechanical network,  
 18, 19  
 diversity of, 30–32  
 explanation of, 27–28 (*see also* Multilevel  
 explanation)  
 backward-looking, 26, 27  
 in biological sciences vs. physics, 11–13  
 constitutive, 18–20, 22  
 contextual, 23–24  
 downward-looking, 26, 27  
 etiological, 20–23  
 network of biological, 18–27  
 as requiring a unified research program, 6–7  
 (*see also* Research program)  
 upward-looking, 26, 27  
 as flowing stream, 100  
 functional aspects, 37  
 as illusion, 31  
 importance of, xvi  
 levels of (*see* Levels)  
 micro-level mechanisms of, 19, 20  
 as natural phenomenon, 10  
 origin of, xv  
 as phenomenal level of organization in brain, 16  
 primary, 35–37, 40, 54 (*see also* Phenomenal  
 consciousness)  
 “primitive form” of, 156  
 problem of, xv–xvi  
 radical embodiment of, 142–144  
 as “real,” 10  
 science of, 3–6  
 philosophical views underlying the, 5  
 as theoretical problem for biology of the mind, 9  
*Consciousness and Cognition* (journal), 6  
 “Consciousness neurons,” 5
- Constitutive mechanisms of consciousness (CMC),  
 294, 297–298
- Content externalism, 144–147
- Contents of consciousness, 37–38, 146, 172–173,  
 295. *See also* Phenomenal contents of con-  
 sciousness; Representational contents of  
 consciousness
- Continuity. *See also* Discontinuity  
 binding of spatiotemporal, 220–221

- Continuity hypothesis (dreams), 422  
Cybersphere, 110–111
- Dalton, John, 288
- Decomposition/decomposability hypothesis, 167, 176–177, 207
- Deductive-nomological (D-N) approach, 12, 286, 287
- Defense mechanisms, biological, 423–425
- Degraded representation models, 374–376
- Derealization, 60
- Description, 202–204  
of ineffable experiences, difficulties in verbal, 47  
systematic, 29–30
- Detached perspective. *See* Third-person perspective
- Direct realism, 151–154
- Disconnection models, 373, 377
- Discontinuity, 247–248. *See also* Continuity  
as failure of serial binding, 243–246
- Dissociations, 372–377. *See also* Sleep-related dissociations of consciousness and behavior  
nature of consciousness in light of, 378–380  
of phenomenal contents of consciousness, 183–189
- Distinct knowledge models, 374, 376
- Disunity, 231–232. *See also under* Unity
- DNA, 22–23, 85–86, 341, 358
- Dorsal simultanagnosia. *See* Balint's syndrome/  
simultanagnosia
- Dorsal-ventral interaction and visual consciousness, 311–312
- Dream bizarreness, 240  
binding and, 239–240, 246–248
- Dream catcher test, 300–303, 346
- Dream content(s), 103–104, 432n1  
classes of, 189–192  
perceptual contents, 79–80  
traces of ancestral environment in, 406–413  
traumatic experience and, 413–415, 422–423  
what we would dream if eyes were open, 88–89
- Dream experience, 84  
presents sensory-perceptual world, 82
- Dream presenter system, 349–351, 353–355
- Dream recall, laboratory studies of, 76–77
- Dream research, methodological problems in, 47–48
- Dream world  
dream self in center of, 82–83, 110, 133–134, 426  
taken as real world, 83–84, 103–105
- Dreaming, 61, 84, 182, 308. *See also* Virtual self;  
Virtual world  
about “current concerns,” reasons for, 421–422  
in animals, 303, 324–327  
animals in, 407–409  
biological function of, 401–404, 427–428  
traces of the, 404 (*see also* Threat simulation)  
defined, 61, 62  
form and organization of consciousness during, 82–84  
lucid, 43, 61–62, 77–78, 83, 93–94  
nonconscious, 62  
as out-of-brain experience, 114–116
- Dreaming brain, 75–76, 84, 97–98. *See also under*  
Phenomenal consciousness; REM (rapid eye movement) sleep  
constraints on locus of control, 85–87  
phenomenal level in, 110  
neural basis of, 94–97  
sensory organs never sleep, 87–88
- Dreams, 84, 151  
aggression in, 405–406  
bad, 411–413 (*see also* Nightmares)  
binding in, 239, 252–253  
failures of semantic-conceptual, 242–243  
unity of human characters and, 248–252  
of blind persons, 89–90  
cassette theory of, 77  
children's, 407–409, 411–413, 416–417  
color qualities, 79–81  
crippled persons walking in their, 91  
emotions in, 405  
“enemies” in, 406–407  
“isolation” of, 92  
misfortunes in, 405  
pain in, 79, 81–82, 158–160  
of paralyzed persons, 90–91  
recurrent, 410–411  
skeptical challenges to the existence of, 77–78  
as transparent surrogate world, 105–107  
typical, 409–410
- Duration of experience, 34
- Dynamic core hypothesis, 316–317
- Egocentric reference frame, 51, 168, 344
- Einstein, Albert, 288
- Electroencephalogram (EEG), 322–324
- Electromagnetic field theory of consciousness, 433n1
- Eliminative materialism, 30–31
- Embodied cognition, 5
- Enactive cognitive science, 5, 142–143
- Epileptic nocturnal wandering, 390–391
- Epileptic seizures, automatic behavior during, 395–396  
case reports, 396–397
- Epiphenomenalism, 363–364, 383
- Evolutionary causes, ultimate, 23
- Existence, xv–xvii, 357, 359–360
- Experience(s), 141  
metaphysics of, 129–131
- Explanatory gap(s), 283, 285, 303–304, 434n2  
historical  
between chemistry and biology, 289–291  
between physics and chemistry, 288

- Explanatory gap(s) (*continued*)  
 lessons to be learned from, 291–292  
 multilevel explanations and, 287–291  
 and the theory reduction model, 285–287  
 Extended consciousness, 50
- Face recognition. *See* Object recognition;  
 Prosopagnosia  
 “Fallacy of misplaced concreteness,” 161  
 Feature conjunctions, 256–257  
 illusory, 214–215  
 Feature integration/feature binding, 213–215  
 Feature integration theory, 256–257  
 Feedback loops, interactive, 317–318  
 Feedback processing sweep, 317  
 Feedback sweep, fast, 317  
 First-person perspective (1PP), 51, 158, 168, 344  
 Focal consciousness, 38–40  
 Forgetfulness, 47  
 Fringe consciousness, 38  
 Fully Immersive Spherical Projection System,  
 110–111  
 Functional magnetic resonance imaging (fMRI),  
 330–335  
 Functionalism, 54
- Geographical orientation, 193  
 Gestalt bubble model, 176  
 Gestalt principles of perceptual organization, 207–  
 209, 370–371  
 Gestalt theory, 174, 175  
 Gestalt windows, 192–195, 228, 241, 248, 307  
 Gestalts in the brain, 273–276  
 Global broadcasting. *See* Access consciousness  
 Global workspace theory, 101, 102  
 Grandmother cells, 270–271
- Hallucinations, 42, 59, 62  
 Hemispatial neglect. *See* Neglect, hemispatial  
 Heterophenomenology, 141, 429n1  
 Hierarchical structure of world, 14–18  
 Higher-order consciousness, 430n5  
 Higher-order perception (HOP) theory, 432–433n7  
 Higher-order thought (HOT) theories of conscious-  
 ness, 148–151, 432–433nn7–9  
 Hippocampus, as recipient of conscious input, 312  
 HOT theories. *See* Higher-order thought (HOT)  
 theories of consciousness  
 Human Phenome Project, 351  
 Husserlian phenomenology, 147
- Iconic memory, 42  
 Illusion. *See also* World-for-me  
 consciousness as, 31  
 Illusory feature conjunctions, 214–215  
 Illusory motion, 221–223  
 Imitation behavior, 398
- Immersion, 109, 111–113. *See also* Presence  
 Immune system, 423–424  
 Implicit information, causal powers of, 380–382  
 Implicit knowledge, 368, 372  
 Implicit object-oriented action, 371–372  
 Inattentional amnesia hypothesis, 265  
 Inattentional blindness (IB), 262  
 conflicting interpretations of, 262–263  
 Inattentional blindness (IB) hypothesis, 265  
 Information processing during sleep, noncon-  
 scious, 61  
 Input-output description, 24–26  
 Input-output functions, 24, 25  
 Instant brains-in-a-vat, 140  
 Instant people, 139–140  
 Instrumentalism, 433n12  
 Intensity of experience, 34  
 Intentional accounts of consciousness, 144–147  
 externalist vs. internalist theories, 145–147  
 Intentional objects, 174  
 Intentionality, 144, 149, 175, 432nn3–4  
 Intracortical connections, 274, 279  
 Introspection, 43–46  
 analytic, 45, 46  
 descriptive, 45  
 interpretive, 45, 46  
 pitfalls of, 46–48  
 Introspective verbal report, 44  
 Isomorphism, 352, 394  
 “Isoqualitative” model, 352
- Just-noticeable-differences (JNDs), 41
- Levels. *See also under* Description  
 of consciousness, 434n1  
 of organization, 13–17 (*see also* Phenomenal level)  
 identification of correct level of, 26–27  
 as ontological/real, 15  
 Linguistic awareness, 430n5  
 Local field potentials (LFPs), 333, 437n2  
 Localization problem, 85–86, 145, 146  
 Location, 34, 173  
 Location binding and the space around us, 228–230  
 Location paradox, solving without miraculous pro-  
 jection, 159–160  
 Locus of control, 85–87, 157  
 Lower-level mechanisms, 294  
 Lysergic acid diethylamide (LSD), 59
- Machine consciousness, 55–57  
 Macroconsciousness, 434n1  
 Magnetoencephalography (MEG), 327–330. *See  
 also* Functional magnetic resonance imaging  
 (fMRI)  
 Map location, 193  
 Master loop hypothesis, 318–319, 324  
 Materialism, eliminative, 30–31

- Mechanistic approach, 12  
 Mehinaku dream reports, 419–420  
 Memories, false, 125  
 Memory. *See also* Amnesia  
   field/observer perspective distinction, 47  
   selectivity of, 47  
 Memory gaps, 385  
 Memory traces, salience of, 420  
 Mental phenomena, 183  
   in isolation, 187  
 Mental presentation, 128–129
