

INDEX

- Aggregate server method, 102
- Asynchronous concurrency modeling, 19
 - Heidelberger-Trivedi model, 133
- Behavior sequence transformation, 75
- Consistent solution, 156
- Convergence, 161
- Critical section modeling
 - aggregate server method, 102
 - Thomasian's state aggregation model, 134
- Decomposition, 49, 50, 132, 155
- Hierarchical modeling, 57, 61
- Hierarchy of models, 57
- Iteration, 41
 - Memory queueing modeling, 16
 - decomposition, 49, 50, 137
- Metamodel, 2,37
- Modeling process, 39
- Monotonicity in queueing networks, 165
- Preemptive priority scheduling
 - bistability, 182
 - Bryant-Kryzenski method, 20, 151
 - Chandy-Laksmi method, 20, 150
 - convergence of iteration, 172
 - improved shadow cpu method, 76
 - load dependent cpu mehtod, 125
 - RTP method, 236
 - Sevcik's method, 47
 - Sauer-Chandy model, 137, 144
- Product form solution, 5
- Recursion, 55
- Refinement, 49
- Serialization, 19
 - aggregate server method, 102
- Sevcik's shadow CPU method, 47

- Simultaneous resource possession, 16
 - Jacobson-Lazowska method, 84
- State space transformation, 116
- Synchronous concurrency modeling, 19
 - Heidelberger-Trivedi load separation model, 134
 - Heidelberger-Trivedi state aggregation model, 133
- Transformation
 - behavior sequence, 75
 - delay server introduction, 152
 - load concealment, 129
 - load scaling, 116
 - load separation, 140
 - model, 39
 - response time modeling, 146
 - response time preservation, 140, 221
 - server aggregation, 135
 - state aggregation, 132
 - state space, 116
 - class aggregation, 143
