

## Subject Index

- 
- Accessory visual tract, 201  
Accomplishment of acts, 83, 155, 185–188  
Acetylcholine. *See* Transmitters  
Acoustic frequency, 90, 92, 117  
Active *vs.* passive movement, 42, 185, 186  
Adaptability, 24  
  amphibian experiments on, 37, 38  
  cellular approach to, 37–39  
  explanation of, 41–44, 46, 48  
  of motor systems, 45, 46  
  role of consciousness in, 36, 75  
Amnesia, 178  
Anger, 187, 203  
*Anopheles* (mosquito), 14  
Antibodies, 14, 26  
Anticipation. *See* Prediction  
*Aplysia* (snail), 211, 215  
Arousal, 77, 79, 104, 150, 202, 203  
Association areas, 61, 186  
Attention, 78, 189  
Axoplasmic flow, 46, 47, 142  
Basal ganglia, 175, 181, 210  
Bees, 16–18, 210  
Behavioral approaches, 145, 173, 174, 184, 185, 188, 189–203  
“Bias” defined, 161, 162  
“Black box,” 171  
Body image, 179, 180, 183, 185  
Brain. *See also* Encephalization, Split-brain patients  
*corpus callosum*, 68, 80  
  electrical stimulation of, 58, 61, 76, 77  
  hemispheric asymmetry of, 68, 81, 82, 202  
  localization in, 56–61, 168–170, 182–185, 200–203  
  microcephalic, 55  
  subcortical structures of, 62, 102–105, 132, 168, 170, 174, 175, 181  
  weight of, 54–55

## 240 Subject Index

- Causality, 3, 9, 25, 28–30, 49, 213  
Center, concept defined, 145  
Cerebellum, 66, 150, 154, 168,  
175, 176, 181, 196, 208–210  
Chance, 14, 25–27, 44, 49, 129  
Chemical labeling, 38, 40, 46, 48  
Cochlea, 12, 92  
*Colliculus superior*, 102, 103  
Color, 90, 92–94, 130, 131, 214.  
*See also* 223n98  
Columns. *See* Organizations  
“Command” neurons, 163, 164,  
171, 200  
Communication, 17, 18, 49,  
66–68, 75, 81, 82, 199, 200  
Consciousness, 71–84, 212–213  
adaptability increased by, 36, 75,  
214  
arousal favoring, 77, 78, 82  
differing in the two hemi-  
spheres, 80–82  
epistemological views on, 84–86  
evolutionary attitude to, 36,  
74–76, 213  
latent period of, 76, 77  
trigger role of, 83, 184  
varieties of, 82  
Convergence, 27, 100, 137, 138,  
144  
*Corpus callosum*. *See* Brain  
*Cortex cerebri*, 56  
Cues. *See* Vision, detectors and  
cues  
Cybernetics, 6, 32, 48, 66, 146,  
197–200. *See also* Explanations  
Dark adaptation, 19, 20, 91, 97  
Delay circuits, 142  
“Demand,” 74, 155, 160,  
165–167, 174, 178, 187, 189,  
196, 212  
Detectors. *See* Vision  
Developmental physiology, 38, 42,  
44  
Directiveness in evolution, 6, 7  
Dishabituation, 214  
Disuse, 49  
Divergence, 21, 144  
Dopamine. *See* Transmitters  
Duplicity theory, 92  
Electroencephalogram (EEG), 28,  
78, 79, 164, 165, 215  
Encephalization, 52–56, 62, 63,  
74, 97, 98, 131, 155, 175  
Engrams, 143, 201. *See also*  
Learning, Memory  
Entropy, 66n  
Epilepsy, 80, 82  
Epinephrine. *See* Transmitters  
Error correction, 30–32, 42, 48,  
75, 83, 155, 160, 173  
Evoked potentials, 40, 76, 79,  
112, 113, 116, 119, 122  
Evolutionary approach, 3, 6–14,  
24, 72, 74–76, 155, 187  
“Expectancy wave” (EEG), 79  
Explanations, 21–22, 186–190  
cybernetic, 197–200. *See also* Cy-  
bernetics  
physicochemical, 2–4, 6  
teleological, 6–11, 13, 16, 25,  
28–30, 34, 47, 130, 187  
Extrapyramidal paths, 163, 169,  
174, 175  
Eye and hand, 31, 98, 173  
Eye movements. *See also* Move-  
ment perception  
prevented, 124  
role in vision, 87, 102, 103, 125,  
126, 135  
types of, 101, 102, 125  
Fechner's law, 87

## 241 Subject Index

- Feedback, 31–34, 45, 48, 49, 66, 135, 143, 147, 153, 155, 161, 166, 171, 173, 179, 194, 196, 197, 199. *See also* Cybernetics, Error correction
- “Final common path,” 138, 144, 192
- Fitness, 9
- Flicker phenomenon, 58, 118
- Form perception. *See* Visual contrast
- Fourier analysis, 116
- Gamma fibers. *See* Motoneurons, Muscle spindles
- Gamma loop, 147–160, 162, 173, 176
- Genes, 6–9, 13, 24, 37, 38, 44, 47
- Geniculo-striate system, 63, 102–105, 107, 112, 120, 130, 180
- “Ghost movements,” 167, 168
- Golgi cell types, 44, 48
- Habituation, 214, 215
- Hierarchies. *See* Organizations
- Hippocampus, 205
- Hominids, 52, 53, 54
- Hormones, 15, 22, 31
- Horsley-Clarke technique, 203
- Hunger, 202
- Hypothalamus, 202
- Immanence, 34
- Immunology, 14–16, 26, 41, 44, 48, 96
- Impulse frequency, 11, 47, 89, 137
- Inferotemporal cortex, 131, 132
- Inhibition, 26, 28, 32, 67, 82, 138–140, 143, 147, 153, 193–196, 198
- cortical, 110, 125, 138, 158
- disynaptic, 144
- membrane potentials in, 92, 140, 142, 162
- recurrent, 32, 33, 194, 198, 211
- release from, 209
- retinal, 97–100
- role of, 33, 99, 105, 143
- surround or lateral, 33, 105, 108, 110, 211
- Integration, 22, 135, 188, 192–194, 196
- Interest, 183, 184
- Interneurons (internuncials), 33, 43, 48, 105, 162, 198
- Intracellular electrodes, 140, 210
- Invertebrates, 107, 163, 164. *See also* *Aplysia*, *Limulus*
- Knowledge of results, 31. *See also* Feedback
- Language. *See* Speech
- Lateral line, 11, 12
- L-DOPA, 208
- Learning, 26, 28, 37, 75, 201, 204, 205
- motor, 45, 178, 206
- sensory, 178, 179, 206
- Limulus* retina, 33, 211
- Load compensation, 151, 152, 173, 198, 199
- Localization. *See* Brain, Organizations
- Magnification by cell number, 62, 63, 66
- “Markers.” *See* Chemical labeling
- Mathematics, 23, 30, 31, 67, 116, 146, 198
- Melanism, 8, 9
- Membrane potentials, 28, 95, 98, 138–141, 162, 172, 210, 211

## 242 Subject Index

- Memory, 46, 49, 61, 75, 80, 143,  
204–206. *See also* Learning  
associative, 37  
evoked by electrical stimulation,  
80  
iconic, 205  
short- and long-term, 205, 206
- Mind. *See* Consciousness
- Molecular biology, 4
- Motivation, 37, 183, 184
- Motoneurons, 32, 33, 138, 139,  
162. *See also* “Final common  
path”  
alpha, 147, 150, 151, 154, 166,  
167, 178  
gamma, 147, 150, 151, 154, 155,  
166, 178  
stimulated from motor area,  
159, 172, 173  
tonic and phasic, 150, 151,  
158–160
- Motor area, 62, 64, 65, 165, 181.  
*See also* Pyramidal tract  
colony concept for, 172, 173  
monosynaptic projections from,  
172  
polysensory inflow to, 170  
tonic neurons in, 174  
trained movements studied in,  
173–175
- Motor end plates, 141, 142
- Motor potential. *See* Voluntary  
movements
- Motor unit, 138–140, 158–161
- Movement, 134, 135, 156, 158,  
178, 179, 181, 183  
active *vs.* passive, 185, 186
- Movement perception, 125, 126,  
156, 178, 186
- Muscle spindles, 126, 147–156,  
173
- Muscles  
cross-innervation of, 44–46  
motor end plates in, 141, 142  
slow and fast, 45, 151, 158–160
- Musicality, 13
- Negative feedback. *See* Feedback  
Neurons. *See also* Interneurons,  
Motoneurons  
connectivity of, 41  
number of, 41, 63  
spontaneous activity in, 27, 67,  
105, 108  
types of, 43, 44, 48  
“Noise,” 67
- Noradrenaline. *See* Transmitters
- Novelty. *See* Dishabituation
- Optic nerve, 100, 104, 105
- Optic radiation, 105, 106, 129
- Organizations, 20, 21, 48, 58, 61,  
63, 96, 97, 104–106, 108–111,  
116, 117, 201, 202. *See also*  
Brain, localization in  
block formation, 188  
colonies. *See* Motor area  
columns, 109–111, 121, 129, 187  
hierarchies, 5, 72, 73, 85, 145,  
158, 160, 189, 193, 212, 213  
systemic, 206–207

- Parkinson's disease, 150, 208, 209
- Perception, term defined, 58, 63,  
94
- Phenotype, 6, 47
- Pleasure, 188, 203
- Polymorphism, 10
- Polysynaptic, term defined, 146
- Posture. *See* Reflexes
- Prediction, 10, 25, 28, 29, 75,  
135, 164, 183
- Psychological concepts, use of in

## 243 Subject Index

- physiology, 69, 129, 130, 182, 189, 202, 203. *See also* "Demand"
- Psychophysical parallelism, 19
- Psychophysics. *See also* Visual contrast, Vision
- classical aspects of, 88–92
- modern version of, defined, 94
- Pulfrich effect, 126, 128
- Purposiveness, 6–10, 25, 29, 30, 34, 36, 37, 41, 47, 49, 96, 128, 129, 135, 158, 161, 164, 175, 176, 187, 192, 201
- Pyramidal tract. *See also* Motor area
- origin of, 169, 170
- sensory projections of, 170, 171
- size in different animals, 52
- Reaction time, 77
- "Readiness potential." *See* Voluntary movement
- Reciprocal innervation, 144, 163, 174, 193–196
- Recurrent fibers, 32, 33, 193–195. *See also* Inhibition, recurrent
- "Reductionism," 5, 85, 210
- Redundancy, 66–68, 198, 201
- Reflexes, 136–145
- conditioned, 28, 36, 37
- interaction of, 137, 138, 193–196
- monosynaptic, 144, 145, 160, 173, 195
- postural, 134, 151, 198, 213
- reciprocal (*see* Reciprocal innervation)
- scratch, 30
- stretch, 32, 144, 146–154, 163, 198
- Release, 149, 206–209
- Resonance
- acoustic, 92
- visual (*see* Visual contrast)
- Reticular activating system, 79
- Retina, 18–20, 33, 62, 96–101, 112
- color contrast in, 130
- directional cells in, 52, 97, 100
- inhibition in, 33, 97, 98
- on-off discharges from, 98, 99, 104
- receptive fields of, 100, 101, 104
- Rhodopsin, 19, 91
- Sensory deprivation, 83, 84
- Serendipity in Nature, 10, 11
- Servomechanisms, 31, 152–154
- Sleep, 62, 73, 78, 79, 150, 202, 203
- paradoxical or REM, 82
- Somatotopic connections, 27
- Sound localization, 92
- Specificity, 21, 37, 43, 44, 143, 201, 204
- Spectral distribution of sensitivity, 90, 91
- Speech, 43, 56, 61, 63, 68, 69, 202, 213
- Split-brain patients, 68, 80–82, 202, 205. *See also* Brain
- Spontaneous activity of cells, 27, 67, 105
- Stabilization of performance, 32, 194, 196, 211
- Stabilized images on retina, 102, 124
- Stereoscopic vision, 119–122
- Striate cortex, 104
- Swallowing, 161, 164
- Synapses, 5, 24, 27, 41, 46, 48, 92, 138, 142, 143
- term defined, 136
- Synaptic transmission, 141, 142. *See also* Transmitters
- Systems analyzed. *See* Organizations

## 244 Subject Index

- Teleological explanation. *See* Purposiveness
- Teleonomic explanations, 7, 24, 187
- Temporal cortex, 56, 61
- Tendon organs, 147, 153, 154, 156, 178, 198
- Thalamus*, 170, 175, 209, 210
- Thirst, 202, 203
- Thresholds, 88–92
- Transfer function, 200
- Transmitters. *See also* Synaptic transmission
- acetylcholine, 140, 141, 143
  - dopamine, 208
  - epinephrine (adrenaline), 206
  - norepinephrine (noradrenaline), 143, 206
  - serotonin, 143
- Vagus nerve, 141
- Verticality perception, 38–40, 42, 119, 123, 128
- Vestibular organs, 42, 123, 125, 146
- phylogenetic development of, 12
- Vision. *See also* Color, Visual area, Visual contrast
