

- Absorption coefficient
continuous,
free-free or inverse
bremsstrahlung, 207
photoelectric, 236-
251
synchrotron, 142-145
general expression
for, 99-104
as imaginary part of
index of refrac-
tion, 46
line, 271-272
negative, 103
for polarized radia-
tion, 103
Absorption lines, 290
Antenna temperature,
67
Associated Legendre
polynomials, 76,
253-254
Balmer discontinuity,
234
Balmer lines, 226-228
Bremsstrahlung, 182-
217
absorption, by in-
verse, 207
classical calcula-
tion, 185-192
in electron-atom col-
lisions, 208
in electron-electron
collisions, 208
energy loss rate com-
pared to ionization
losses, 201, 213
- Bremsstrahlung (con-
tinued)
Gaunt factor, 189,
200, 203
many-body effects,
208
from a plasma, 202-
207
quantum mechanical
calculations, 193-
202
relativistic effects,
210-213
Black Body radiation,
59-67
Boltzmann formula, 61
Brightness temperature
66
Cassiopeia A, 142
Centaurus A, 132, 180
Characteristic func-
tions, 69-73
see also Eigenfunc-
tions
Characteristic states,
69-73
Characteristic values,
69-73
Collisional excitation
277-282
cross section for
electron-ion col-
lisions, 279-280
rate for a Maxwellian
plasma, 281
Collisional ionization
rate, 290

- Collisional losses, 182-185
Collision strengths, 279-280
Compton scattering, 59, 159ff
see Electron scattering
Crab Nebula, 132, 148
Curvature radiation, 41-43, 54
Cyclotron frequency, electron, 43
Cyclotron radiation, 108-117
Cygnus A, 149
Delta function, 22
Density of states, 97-98
Dielectronic recombination, 223-224
Dipole approximation
classical, 31
quantum mechanical, 93-97
Dipole moment
electric, 8
magnetic, 9
Dipole radiation
classical, 30-35
quantum mechanical, 94
Doppler effect, 17, 18, 53
as a line broadening mechanism, 116, 272-273
Eddington limit, 162
Eigenfunctions, 69-73
angular momentum, 75-76
for single electron atoms and ions, 253-254
spin, 78-79
Eigenstates, 69-73
see also Eigenfunctions
Eigenvalues, 71
see also Eigenfunctions
Einstein coefficients, 60, 61, 62-64, 92
Electromagnetic field of an accelerated charge, 21-30
energy density of, 5
Lorentz transformation of, 11
momentum density of, 7
of a uniformly moving charge, 9-12
Electric quadrupole moment, 9
Electric quadrupole radiation, 267-268
Electron scattering, 151-181
Compton scattering by electrons at rest, 155-158
Compton scattering by moving electrons, 162-171

- Electron scattering (continued)
Energy loss due to, in relativistic plasma, 164
in thermal plasma, 171-172
Inverse Compton effect, 162-171
Klein-Nishina formula 155-158
of microwave background radiation, 168-169, 180
pair annihilation and creation in, 174-177
and radiation pressure, 159-162
radiative transfer effects, 173
Thomson cross section 152-155
Emission coefficient, 100
Emission integral, 206
Emission measure, 206
Emissivity, 202
Energy flux vector, 4
Expansion, energy losses due to, 135
effect on spectrum of radio sources, 141-142, 150
Faraday effect, 49-51
Flux of radiation, 66
Forbidden lines, 265-268
Fourier series, 27
Free-free radiation and absorption, see Bremsstrahlung
Free-bound radiation see Radiative recombination
Gauge, Coulomb, 14
Lorentz, 14
invariance of, 14
transformation of, 14
Gaunt factor bremsstrahlung, 189, 200, 203
radiative recombination, 219
Green's function, 22-25
Hamiltonian function for electron in electromagnetic field, 68
for electron spin, 79-80
for interaction with radiation field, 80
Hydrogen and Hydrogenic ions
Balmer lines, 226-228
collisional ionization rate, 290
Lyman series, 261, 290-291
oscillator strengths, 260-261
photoionization rates, 236-243
radio recombination

- Hydrogen and Hydrogenic ions (continued)
lines, 228-231
recombination rates, 219-223
transition probabilities, 262-263
21 cm line, 262, 289-290
Impact parameter, 182-184
Index of refraction, 44-47
Index of emission, 61, 103
Interstellar medium
effect on polarization of radio waves 50-51
effect on pulsar pulses, 55
Interstellar medium, X-ray absorption by, 245-247
Intensity, definition of, 61
Ionization equilibrium in thermodynamic equilibrium, 107
in a low density gas, 283
Ionization
collisional, 183-185
photoelectric, 236-251
Ionization Energy losses, 182-185
K-fluorescence yield, 245
Kinetic equation, 136-139
Klein-Nishina formula, 152-158
LaPorte's rule, 253
Larmor's radiation formula, 32
Level population, 61, 277, 282
Lienard-Wiechert potentials, 21-30
Lines, 253-291
absorption, 290
broadening mechanisms 173, 270-274
emission, as a cooling agent for a hot plasma, 283
formation of, 274-277
profiles, 269-274
Lorentz condition, 13
Lorentz transformation 10, 11
Lyman alpha, 261, 290-291
Magnetic dipole radiation
from a rotating magnetic star, 53-54
from an atom, 267-269
Magnetic field,
effect on propagation of electromagnetic

- Magnetic field (continued)
 waves, 46-51
energy density of in
 radio sources, 132
Mass absorption coefficient, 245
Maxwell distribution, 202
Maxwell's equations, 2, 45
Maxwell's stress tensor, 6
Microwave background radiation, 106,
 168-169, 180
Operators, 70-72
 angular momentum, 74
 spin, 76-79
Optical depth, 100
Orthonormality of wave functions, 72
Oscillator strengths, 96
 average, 258-259
 hydrogenic, 260-261
 for complex atoms
 and ions, 263-265
 sum rules, 258-260
Pair annihilation and creation, 174-177
Parseval's theorem, 33-34
Perturbation theory, time-dependent, 80-87
Partition function, 107
Photons, 57
Photoelectric effect, 236-251
hydrogenic cross sections 236-243
K-shell cross sections 243-245
and X-ray absorption
 in interstellar medium, 245-247
Planck's law, 64
Plasma, effects of on propagation and emission of electromagnetic waves, 44-51
oscillations, frequency of, 45
excitation of by fast electrons, 184
Polarization of electromagnetic waves, 18-21
Poynting vector, 4
Pulsars, 54, 55
Radiation,
 from an accelerated charged particle, 35-55
 semi-classical theory, 60ff
Radiation pressure, 159-162
Radiative recombination, 218-235
Balmer lines, 226-228
case B, 221
continuous spectrum,

- Radiative recombination, continuous spectrum (continued) 224-226
cross section, 219
radiofrequency lines, 228-231
rate coefficients, 219-223
Radiative transfer equation, 100
Radio sources, cosmic, minimum energy requirements, 130-133
spectra, 133-142, 150
Razin effect, 145-146
Redshift, 53
Resonance scattering, 273
Retarded potentials, 26-30
Rotation measure, 50
Rydberg constant, 228-229
Saha ionization formula, 107
Scalar potential, 6
Schrödinger equation, 67-79, 72
Selection rules, 252-258
Spin, electron, 73-79
Spin-orbit interaction 80
Stationary states, 72
Statistical weights, 61
Stefan-Boltzmann constant, 65
Stimulated emission of radiation, 61, 103
Stokes parameters, 20-21
Strömgren spheres, 234
Synchrotron radiation, 108-150
arbitrary pitch angles 121
critical frequency of, 119
from an ensemble of particles, 123-128
evolution of spectrum 133-142
from individual particles, 115-123
lifetime for energy loss, 111
peak frequency, 111
polarization, 128, 129
and Razin effect, 145-146
reabsorption, 142-145
small pitch angle, 123, 127-128
spectrum, 115, 119
total energy loss, 110
Thomson cross section, 152-155

Transition probability
 84
 for absorption, 91-92
 for continuously disturbed final states
 97
 for dipole radiation,
 95-97
 and Einstein coefficients, 91-92
 for electric quadrupole radiation, 267
 for hydrogen, 261-262
 for induced emission,
 90-91
 for magnetic dipole radiation, 267
 for spontaneous emission, 60, 61, 91-92
Vector potential, 7
Wave functions, 67
 expansion of in terms
 of energy eigenstates, 73
Wave equation
 for electromagnetic field, 12-16
 for electrons, 67-69
Wave number, 16
Wave vector, 16
X-ray absorption, 243-247
X-ray background, 181
