

# Index

- Acantharia*, 346  
Acid rain, 24–25, 200, 248  
Adaptation, 4, 17  
Advection-Diffusion for the Archean (MADA), 82, 87–88  
Air flow  
  modification by plant structures, 313–314  
  turbulent, 310  
Albedo, 23, 85  
  of bogs, 249  
  cloud, 25, 143, 148–150, 296–297  
  vegetation, 398, 401, 402  
Alchemists, 67  
Algae, in Phanerozoic period, 268, 270–271  
Alkalinity, of ocean, 184–185  
Altruism, planktonic dimethylsulfide emission and, 156–157  
Amazonia World, 112  
Ambiguous worlds, 112–113  
Angiosperms, 27  
Animism, 34  
Anisotropy, 125  
Anorthite weathering, 321–323, 325, 327, 329  
Antigaia, 100  
Antigaian cycles, 99  
Antigaian worlds  
  ambiguous, 112–113  
  classical, 110–111  
  variant, 111–112  
Ants, 21, 24–25  
Aragonite  
  solubility, 262  
  stability, 261–262  
Aragonite seas, 261, 263  
Aragonite-secreting species, in Phanerozoic period, 266–269  
Archean period, 80–81  
  annual cycle experiment, 85–86  
  box-advection-diffusion model, 86–87  
  global ocean dynamics model, 82–83  
  numerical models of ocean, 82  
  transition to Proterozoic period, 9  
Aristotle, 77  
Assumptions, vs. causal processes, 48  
Astrogeophysiology, 388  
Atmosphere. *See also specific atmospheric gases*  
  biogenic gases of, 353  
  of Earth, 12–13  
  ozone evolution, 354–355  
  planetary, comparison of, 13–14  
  sulfur oxidation pathways, 299  
Atmosphere-biota-soil system, 224–226  
  dynamic considerations, 233–234  
  equilibrium considerations, 231–233  
  feedback mechanisms, 231  
Atmospheric aerosol, cloud condensation nuclei and, 147–148  
Atmospheric meridional transport, 88  
Australian organisms, 21  
Autotrophic bacteria, 349  
Autotrophy, 376  
Bacon, Francis, 67  
Bacteria  
  atmosphere and, 13  
  autotrophic or carbon-fixing, 349  
  iron-oxidizing, 347  
  iron-reducing, 347  
  magnetotactic, 347–348  
  manganese-oxidizing, 346–347  
  methotrophic, 347  
  Balance of nature, 36  
  BCS model, 87–88  
  Bicarbonate, 216  
  Biochemical feedback, energy demand, 400–401  
  Biogenic weathering, 27  
  Biogeochemical box models, 8  
  Biogeochemical cycling, biomineralization and, 347–348  
  Biogeochemical evidence, of Gaia hypothesis, 220–221  
  Biogeochemical explanation, of contemporary oxygen levels, 170–171  
  Biogeochemical feedbacks, 395  
  Biological operatives, 101–102  
  Biological organization, as epiphenomenon, 50  
  Biological shielding, of solar ultraviolet, 354–355  
  Biological systems, coevolving with physical systems, 21  
Biomass  
  burning, oxygen and, 356–357  
  evolution, organic carbon in sediments and, 216  
  in Gaian regulation, 247  
  global, limits to growth, 211–213  
Biomes  
  physiology, 277–278  
  vegetative change, 277, 278–279  
Biomineralization, 263  
  biogeochemical cycling and, 347–348  
  biologically controlled, 264, 346  
  biologically induced, 264, 346  
  climate and, 348–349  
  minerals of, 346  
  plate tectonics, 349–350  
Biosphere  
  atmosphere and, 353  
  as carbon dioxide regulator, 175  
  microbial, 221  
  model description, 224–227  
  net biogenic input flux, 227–229  
Biosphere-atmosphere feedback loops, 247  
Biosphere-climate-carbon dioxide cycling linkages, 279  
Biota, 38  
  as destabilizing force, 41  
  Gaia hypothesis and, 11–15  
  global, perturbations, 388  
  interactions with geosphere, 23  
  living, carbon dioxide fertilization of, 223  
Biota-geosphere models, 79  
Biota-soil system, 224–226  
  temperature-induced responses, 223  
Biotechnology, 409

- Biotic plenitude, 211  
 BLAG model, 191–192, 198, 243  
 Bog, feedback mechanisms, 335–336  
 Bog climax hypothesis, 248  
 Bohr, Niels, 50–51, 55  
 Box-advection-diffusion model (BAD), 86–87  
 Brazil, 408  
 Bridgewater Treatises, 15–16  
 Bruno, Giordano, 67  
 Bryan-Cox-Semtner (BCS) model, 82–85  
 Bryophytes  
     paludification and, 249  
     regulatory capacity, 315–316  
     soil acidification and, 248  
 Buckland, William, 16  
 Burial rate, 170  
 Butterfly, 20
- Calcite(s). *See also* Argonite; Magnesian calcite  
     solubility, 262  
     stability, 261–262  
 Calcite seas, 261, 263  
 Calcite-secreting species, in Phanerozoic period, 266–269  
 Campanella, Tommaso, 67  
 Capital formation and investment, 405–406  
 Carbon  
     atmospheric, drawdown, for Earth surface temperature, 203  
     biological fixation, 211  
     burial loops, 200  
     geochemical cycle of, 161–162
