

Index

- Agriculture, mechanization of,
 - 13-14
 - effect on employment, 13-14
 - effect on production, 13-14
- American Electric Power System, developmental techniques, 70, 80-81, 87-88, 90
- Applied science and technology, 6
- Capital cost elements, reductions by design, 97-98
 - their universal character, 22
- Capital costs, 23
 - on a governmental basis, 23, 26
 - reduction of in coal mining, 62
- Capital costs and production, 17
- Centralized control, 95
- Centralized service organization and discontent, 73
- Coal, OVEC, 117-119
 - response of to nuclear power's lag, 47
 - river transportation, OVEC, 119
- Coal negotiations, OVEC, and escalation, 118
- Coal vs. nuclear energy, year 2000, 38
 - not enhanced for coal, 60
 - retarded transition to nuclear, 61
- Combination electric and gas utilities, 16-17
- Computers, systems approach older, 107
- Contract cancellation, OVEC, and Congressional confirmation of, 134-135
- Controlled fission reaction, demonstration of, 4
- Conventional energy sources, continuing importance of, 41
- Cooling towers, for greater site availability, 73
- Cost, elements of risk, in private and governmental operations, 25
 - technological change, 25
- Economic analysis, 12
- Economic disincentives to technological development, 15
- Economic indices, no criterion of economic results, 78-79
- Economics, consequences of neglecting, 28
 - determination of and parameters of underlying factors, 27
 - eleemosynary, 19
 - ward and guardian, 19-20
- Electric energy, interrelationship between costs, technology, management, and sales, 39

INDEX

- Electric energy costs, influence
 - on sales, domestic, 39
 - influence on sales, industrial, 39
 - influence on sales, international, 40
- Electric energy generation, importance of fuel costs, 38
- Electric lighting, economic background of, 15
- Electric utility industry, growth of, 32
- Electricity, coming substitute in transportation, 33
 - substitute for fossil fuel, 32
- Energy sources, changes 1920-1960, 34
 - in year 2065, 43
- Engineering, the key to material progress, 8
 - products of and economic validity, 8
- Engineering and economy of use of all resources employed, 9
- Engineering beyond limits of science, 8
- Engineer's functioning, criteria for social and/or economic benefit, 10-11
- Flexibility of contract—OVEC, 141-142
- Fossil fuel costs, coal in 1966-1967, reasons for, 45
 - in natural gas areas, 44
 - in 1948-1965 in coal areas, 43-44
- Fuel, neglect of sources in electric utility operations, 31
- Fuel costs, effect of 1 Btu per kwh, 101
 - effect on industrial location, 40
 - influence on over-all economics, 31-32
- Future economies, by larger single-shaft units, 100-101
- Generating efficiency—OVEC, stimulated by high load factor and low capital costs, 121
- Hydroelectric power, position among energy sources in year 2000, 35
- Hydrogen cooling, effect on size, cost, and reliability of generators, 99
- Incentive to economy—OVEC Project, built into contract, 132
- Industrial revolution, economic background of, 14
- Innovation, role of engineering, 12
 - role of production tools, 12
- Interest charges, varying on basis of social factors, 18
- Interlinkage of technology, engineering, and economics extends beyond generation, 103
- Investment per kilowatt, techniques for reduction, 83
- Larger units, cutting cost by, 80
- Limits on unit size, by size of system, 94
- Low-cost, quality service, attraction for specialized loads, 71
- Low equity financing—OVEC, loan negotiations, 136

- Low equity financing—OVEC
 (continued)
 reduction of equity to 2.5%,
 136
 solution adopted, 135
- Maintenance cost reduction,
 through interchangeability
 of spare parts, 96
 through instrumentation, 95-
 96
- Nuclear power, Bridgman, an
 increase over Browns Ferry
 Unit 3, 55
 Browns Ferry, 50
 Browns Ferry Units 1 and 2,
 54
 cost uncertainties, 56
 Dresden, no real progress over
 Oyster Creek, 53
 effect of coal's firming prices
 on, 49
 growing importance of, 35
 growth rate expected to sub-
 side, 57
 growth rate at sustainable
 level, 57
 not yet dominant, 57
 Oyster Creek, incompatibility
 between bid price and cost,
 52
 Oyster Creek, reasons for
 striking bid, 51
 progress in economics, 58
 reasons for takeoff, 48
- Nuclear power costs, disappoint-
 ing progress in improving,
 47
- Nuclear power development,
 significance of, 3
- Nuclear power progress, Oyster
 Creek, 48
- OVEC Project, capital required,
 110
 coal, availability at reasonable
 prices as basic requirement,
 116
 diversity of problems, 113
 performance vs. original
 promises, 138
 simultaneous study of prob-
 lems, 115
 size, 108
 330-kv transmission, 121-122
 windfalls, elimination in ne-
 gotiations, 116
- Pollution, effect on coal's posi-
 tion, 49
 OVEC Project, anticipated,
 128
- Railroad transportation, causes
 in decline of, 16
- Reduction of maintenance costs,
 through rationalization of
 practices, 93
- Resources, optimization use of,
 use of alternative costs, 24
- Science, its relation to econom-
 ics, 6
- Scientific and technological
 progress, benefits of, 4
 need to carry forward, 4
- Scientists and engineers, differ-
 ent professions, their com-
 mon ties, 10
- Simultaneous low-cost and high-
 cost money, 18
- Supercritical double reheat cy-
 cle, achievement in record-
 breaking efficiencies, 90-
 91

INDEX

- Taxes forgone, a cost to the economy, 21
- short-sighted view of, 21
- Technology and economic feasibility, 7
- Thermal efficiency, new standards of, 91-92
- Transportation costs, opportunities to reduce in coal by barge and pipeline, 62
