

Index

- Accidents, allocating responsibility for, 251–252
- Action analysis, 37–54
 - by adults, 39–42
 - attention focused in, 37, 51–53
 - bottom-up processes in, 41
 - break points identified in, 39–40
 - and change blindness, 38, 39, 48–49
 - and effects of overlaid tones in videos
 - for adults, 40
 - for infants, 46–47
 - end point judgments or completion points in, 40, 51–54
 - hierarchical organization in, 40–41
 - by infants, 42–48
 - intention detection in, 38, 39
 - goal-relevant aspects of, 49
 - and role of meaning, 39
 - processing compared to object recognition, 53
 - segmentation along intention boundaries in, 40–42
 - by infants, 42–48
 - top-down processes in, 41
 - in understanding of intentions, 4
- Age
 - and change detection performance, 176–181, 182
 - and extramission beliefs, 109, 111, 117
- Airplane pilots, change detection by, 183, 187
- Animation
 - and change blindness blindness, 245
 - and illusion of explanatory depth, 245
- Appearance-reality conflations, 129
- Attention
 - in action analysis, 37, 51–53
 - affecting change blindness, 37–38, 48–49
 - auditory, 26
 - and change detection, 169, 170, 181
 - children’s understanding of, 25–26, 131
 - and cognitive processes, 166
 - diverted by distractions, legal aspects of, 261, 271–272
 - and inattention blindness affecting behavior, 262–264
 - lapses of
 - accidents in, 261
 - and products liability law, 272–274
 - limited capacity for, 25
 - linked to awareness, 121–122, 126
 - and processing of input, 25
 - and scene representation, 166
 - selectivity in, 25
 - in situation awareness, 218
 - task-oriented focus in, 26
 - in task-unrelated images and thoughts, 204, 208
 - and zoning out while reading, 212
- Audition, and extramission beliefs, 104–105
- Automatic processes
 - in detection of gaze direction, 49
 - distorted by conscious processing, 192
 - and zoning out while reading, 219
- Automobile driving
 - change detection in, 6, 165
 - and liability for negligence, 254
 - situation awareness in, 218
- Awareness
 - definition of meta-awareness, 222–223
 - of lexical ignorance, in children, 4–5, 57–71
 - meaning-cued, 59–60
 - word-cued, 58–59
 - visual, attention linked to, 121–122, 126
 - of zoning out while reading, 209, 212

- Beliefs about seeing, 5–7. *See also* Extramission beliefs
- Beliefs of subjects about their capabilities, 2, 6, 8, 127, 145, 147, 187. *See also* Change blindness blindness
 - overestimation in (*see* Overestimation of cognitive abilities)
 - and predictors of underconfidence about knowledge, 247
- Bootstrapping process used by children, 4, 10
- Boundaries in segmented units of intentional action
 - seen by adults, 39–42
 - seen by infants, 44–48
- Bright-line rules of conduct, 270
- Causal patterns
 - search for
 - and illusion of explanatory depth, 241–243
 - and self-assessment of explanatory knowledge, 228–229
 - sense of insight into, 228, 242–243
- Change blindness
 - and action analysis, 37–54
 - attention affecting, 37–38, 48–49
 - and beliefs about seeing, 5–7
 - compared to cognitive illusions, 193
 - examples of, 1–2, 121–126
 - actor swaps in, 2, 37, 124–125, 147, 187, 193
 - between-view changes in, 1, 123–124, 127
 - range of stimuli in, 38
 - expectations of stability in, 197
 - expertise affecting, 49–51
 - and failure to detect novel events, 122, 146, 262
 - and illusion of continuity, 126
 - as intentional task, 129
 - labeled objects affecting, in infants, 124
 - and trust in impressions of sameness, 67, 69, 70
- Change blindness blindness, 126–132
 - analysis of magnitude of, 151–152, 154–156, 158
 - animation affecting, 245
 - and children's reasoning about representations, 129–132
 - compared to illusion of explanatory depth, 228, 243–245
 - empirical demonstrations of, 147–161
 - estimates of change detection response time in (*see also* Overestimation of cognitive abilities)
 - with delayed changes, 154–157
 - with immediate changes, 150–153
 - with increased magnitude of change, 157–158
- experiments in, 145, 148–162
 - discussion of, 158–161
 - effects of particular changes used in, 160
 - goals of, 148
- explanations for, 128–129
 - and justifications by adults, 131
- and metacognitive control over visual processes, 161
- as metacognitive error, 145–162
- persistence throughout many trials, 152
- and responsibility for accidents, 262–264
- as visual metacognition, 126–129
- Change detection
 - accurate prediction of success in, 128–129
 - by airplane pilots, 183, 187
 - and beliefs of subjects about their capabilities, 2, 6, 8, 127, 145, 147, 187 (*see also* Change blindness blindness)
 - false impressions in, 68
 - in flickering display of images, 6–7, 123, 165–183
 - age affecting, 176–181, 182
 - attention in, 169, 170, 181
 - in change blindness blindness studies, 145, 148–162
 - executive function in, 171, 173
 - individual differences in, 165–183
 - inhibition of irrelevant information in, 172, 173
 - interference measures affecting, 182
 - number and spatial relations of objects affecting, 182
 - perceptual speed in, 170, 173, 182
 - psychometric assessment in, 168–173
 - results of, 173–181
 - variance analysis between response times in, 173–176
 - verbal working memory in, 171, 173
 - visuospatial working memory in, 169, 170, 173, 182
 - interruptions affecting, in real world, 183
 - in perceptual matching trials, 67
- Children and infants
 - development of knowledge about vision, 22–31
 - in infants, 14–22
 - level-1 and level-2 understanding, 22–25, 61–62
 - egocentric point of view in, 4
 - extramission beliefs of, 98

- gaze-following behavior, 14–17
 - in habituation trials, 16
- illusion of explanatory depth in, 237–240
- insights about attention, 25–26
- lexical ignorance affecting perceptual
 - performance, 4–5, 57–71 (*see also* Lexical ignorance awareness in children)
- monitoring of stored knowledge, 5
- reasoning about representations, 3–4, 13, 129–132
- self-assessment in
 - of explanatory knowledge, 229
 - of memory, 237–238
- size constancy in (*see* Size constancy, developmental changes in)
- studies of segmentation skills for action
 - analysis, 42–48
 - familiarization phase in, 42–45
 - intermodal matching in, 45–46
 - tones related to completion points in, 46–47
- testing with false-belief task, 3–4, 13, 130, 133, 136–137
- understanding of attention, 25–26, 131
- Cingulate cortex in conflict monitoring, 222
- Cognitive abilities
 - overestimation of, 2, 6, 8, 127, 145, 147, 187, 252 (*see also* Overestimation of cognitive abilities)
 - in real person, 262–264
 - in reasonable person test, and consequences of mismatch with real person, 264–275
- Cognitive illusions compared to change blindness, 193
- Cognitive processes
 - controlled by implicit learning and memory, 191
 - in perceptual change detection, 166
- Cognitive supplementation hypothesis
 - and size constancy in children, 78
 - instructions affecting, 86–89
 - test of, 81–86
 - and size estimates by adults, 78, 79–80, 92, 93
- Coherence in scenes and perceptual expectations, 134
- Comparative negligence system, 270–271
 - adverse consequences of, 271–272
- Comparison processes similar to strategy selection, 193
- Comprehension monitoring during reading, 204
 - assessment of, 206–207
 - and error detection in texts, 206–207
 - and prediction of comprehension performance, 206
 - reciprocal teaching of, 205
 - training for, 205–206
 - transactional strategies for, 205
- Computerized visual systems
 - and evidence of extramission beliefs, 99–101
 - as nonintentional representations, 137–139
- Concepts, theory-based approach to, 8
- Conceptual information compared to perceptual information, 193–196
- Conflations of appearance and reality, 129
- Consciousness
 - compared to metaconsciousness, 8
 - experiential, dissociation from metaconsciousness, 203–204, 216–217
- Conscious processing interfering with performance, 192–193
- Controlled processing compared to automatic behaviors, 219
- Daydreaming. *See* Zoning out while reading
- Developmental issues in illusion of explanatory depth, 237–240
- Development of knowledge about vision, 13–31
 - in children, 22–31
 - in infants, 14–22
- Dissociation, temporal, 203–204
- Distance perception
 - affecting appearance of objects, 5, 25
 - and size estimations by children, 76, 77–78
 - instructions affecting, 86–89
 - testing of cognitive factors in, 81–86
- Distractions affecting attention, legal aspects of, 261, 271–272
- Driving. *See* Automobile driving
- Educational experiences affecting extramission beliefs, 105–111
- Egocentric point of view in children, 4
- Electroencephalography in zoning out during reading, 222
- Emotional reactions to objects, and social referencing, 18–19
- Executive function
 - in change detection, 171, 173
 - and cognitive processes, 166
 - and metacognition, 7
- Experiential consciousness, dissociation from metaconsciousness, 203–204, 216–217

- Expertise
 affecting change blindness, 49–51
 and overconfidence in explanatory knowledge, 245–246
 visual, and perceptual inferences, 134
- Expert testimony, problems with, 274
- Explanations
 omissions of detail in, 242
 problems with, 242
- Explanatory knowledge or understanding
 compared to factual knowledge, 233–234
 overconfidence in, 232–233
 expertise affecting, 245–246
 predicted for other people, 246–247
 self-assessment of, 227, 229–232
 in children and in adults, 229
 and illusion of explanatory depth, 9, 228–232
 (*see also* Illusion of explanatory depth)
 search for causal patterns in, 228–229, 241–243
 types of knowledge affecting, 232–233
 and underestimation of information needed, 240
- Extramission beliefs, 5–6, 24, 97–117, 129
 in adults, 101
 age affecting, 109, 111, 117
 in ancient or medieval philosophers, 97
 as camera analogy, 113
 and change blindness findings, 5–6
 in children, 98
 and errors in reasoning, 115–116
 evidence of, 99
 in computer representations of vision, 99–101
 intractability of, 106–107
 learning affecting, 105–111
 with active processing of information, 109–110
 effective short-term experiences, 107–109
 with extensive questioning, 110
 ineffective experiences, 105–107
 and nature of scientific misconceptions, 114–115
 necessity training affecting, 102
 ontology hypothesis in, 113
 origins of, 113–117
 and role of brain in vision, 113
 and role seen for emissions in vision, 111–113
 variables affecting number of responses
 with audition and olfaction questions, 104–105
 and transfer among questions, 104
 with vision questions, 103–105
- Eye movements
 and change detection, 7, 122–123, 165
 in flickering display of images trials, 178–180
 and cognition, 214–215
 in encoding object properties, 243
 and zoning out while reading, 213–215, 222
- Face recognition memory
 irrelevant perceptual information in, 196
 verbalization affecting, 192
- Factual knowledge
 compared to explanatory knowledge, 233–234
 self-testing of, 234
- False-belief task in testing of children, 3–4, 13, 130, 133, 136–137
- Feeling of knowing
 accuracy of judgments in, 189
 and cue familiarity hypothesis, 189
 and retrieval of items from memory, 188–190
 strength of, affecting duration of search, 190
 and trace access hypothesis, 189
- Filmed intentional actions
 color changes in, 52
 frame deletions in, 52
- Film editing, gaze-directed attention in, 134–135
- Flickering display of images, change detection
 in, 6–7, 123. *See also* Change detection, in flickering display of images
- Folk psychology
 and approach to concepts, 8
 and theory of mind, 13
- Gaze
 another person's, followed by infants, 14–17
 automaticity of gaze direction detection, 49
 behavioral regularities associated with, 17
 referential nature of, 15–17
 and relation between gazer and object, 16–17
 in habituation trials for infants, 16
- Gaze-directed attention
 and change detection, 134–135
 in chimpanzees, 21
 in preschool children, 24
- Goal-relevant aspects of intentional action, 49
- Gunpowder manufacture, development of, 240–241
- Habituation trials
 and gaze-following behavior of infants, 16
 social referencing in, 18–19
- Hearing, and extramission beliefs, 104–105

- Ignorance
 - lexical, children's awareness of, 4–5, 57–71
 - monitoring of, 57
- Illusion of explanatory depth, 9, 228–232
 - adaptive value of, 243
 - animation affecting, 245
 - compared to change blindness blindness, 228, 243–245
 - developmental issues in, 237–240
 - factors affecting, 232
 - functional account of, 241–243
 - perceptually salient components affecting, 247
 - and search for causal patterns, 228–229, 241–243
 - in self-assessments
 - of narrative knowledge, 236–237
 - of procedural knowledge, 236
 - self-serving bias in, 228
 - sense of insight in, 228, 242–243
 - and underconfidence about knowledge, 247
 - visible parts affecting, 245
- Inattention blindness, 121–122, 126, 146
 - and responsibility for accidents, 262–264
- Incompetence, dual burden of, 232
- Individual differences
 - in knowledge of distance related to apparent size, 91
 - in visual processing of scenes
 - attention in, 166
 - change detection in (*see* Change detection, in flickering display of images)
 - memory affecting, 166
- Infants. *See* Children and infants
- Inferences
 - in action analysis, 37, 38, 52
 - of visual experience of others, 22
- Informational aspects of seeing something, 19–20
- Inhibition of irrelevant information in change detection, 172, 173
- Insight, sense of, and illusion of explanatory depth, 228, 242–243
- Intentional actions
 - boundaries between, 40
 - interpreted by children, 4
 - sensitivity to interruptions in, 4
- Intentional collapse, causes of, 134–135
- Intentional loop, and reasoning about representations, 132–137
- Intentional theory of mind, 132–133, 134
- Intention detection in action analysis
 - and change blindness, 38, 39, 48–49
 - goal-relevant aspects of, 49
 - and role of meaning, 39
 - and segmentation of action units
 - in adults, 40–42
 - in infants, 42–48
- Interruptions
 - affecting change detection, 183
 - conscious processing interfering with visual metacognition, 192
 - sensitivity to, in intentional actions, 4
- Intuitive aspects of reasonable person test, 257–258, 260–262, 275
- Knowing, feeling of, and retrieval of items from memory, 188–190
- Knowledge
 - explanatory, self-assessment of, 227, 229–232
 - and illusion of explanatory depth, 9, 228–232 (*see also* Illusion of explanatory depth)
 - types of
 - factual, 233–234
 - narrative, 236–237
 - procedural, 234–236
 - and self-assessment of explanatory knowledge, 232–233
- Knowledge acquisition
 - identification of sources in, 27
 - perceptual access in, 26–27
 - preexisting biases or expectations affecting, 29
 - visual information in, 28–30
 - ambiguous input affecting, 29
 - different reactions to, 29–30
 - fake objects affecting, 29
 - visual properties identified in, 28
- Language
 - learning of
 - by labeling of objects, 17–18
 - and perceptual performance in children, 4–5
 - and lexical ignorance awareness in children, 4–5, 57–71
 - structure detection by infants, 48
- Learning experiences affecting extramission beliefs, 105–111
- Legal issues
 - in allocating responsibility, 251–252
 - in metacognitive errors, 10, 275
 - in mismatch between reasonable and real person, 264–275

- Legal issues (cont.)
 and alternative means of identifying
 negligence, 270–275
 corrective justice in, 267–268
 overestimation of cognitive abilities in,
 268–269
 strict liability system in, 265–267
 problems with expert testimony, 274–275
 in products liability law, 272–274
- Lexical ignorance awareness in children, 4–5,
 57–71
 in action reference, 60–61, 63
 and appreciation of representational
 inadequacy, 68, 71
 correlation with visual recognition judgments,
 66–67
 and detection of change, 67–68
 and efficiency of memory processes, 65–67
 encoding difficulty affecting, 65–66
 preexposure affecting, 65
 repetition priming affecting, 66
 experiences promoting, 62–63
 and global impression of novelty, 60–61, 66
 and judgment of another's ignorance, 61–62, 69
 and mapping of novel words onto novel
 actions or objects, 60, 63–64, 69
 efficient retrieval processes in, 64–65, 69
 familiar name justifications in, 64
 mutual exclusivity principle in, 64
 meaning-cued awareness, 59–60, 63
 in object reference, 59–60, 62–63
 word-cued awareness, 58–59, 62–63
- Liability
 legal issues in, 251–252
 for negligence, 254
 products liability law, 272–274
 strict liability system in tort law, 265–267
- Magnetic resonance imaging, functional, in
 conflict monitoring, 222
- Manufacturers, accountability in products
 liability law, 272–274
- Meaning
 in analysis of scenes and actions, 39
 gists of, 39, 134
- Meaning-cued lexical ignorance awareness in
 children, 59–60, 63
- Memory
 affecting change detection
 verbal working memory in, 171, 173
 visuospatial working memory in, 169, 170,
 173, 182
 false memories from perceptual information,
 196
 perceptual mechanisms in, 194–195
 retrieval of items from
 and feeling of knowing, 188–190
 preretrieval stage in, 189
 and scene representation, 166
 studies with source of activation confusion
 models, 194–195
- Meta-awareness, definition of, 222–223
- Metacognition
 adaptive character of, 196–197
 as automatic or unconscious process, 188, 191
 and feeling of knowing, 188–190
 inaccuracies in, 192–193
 and change blindness blindness, 145–162
 legal aspects of, 10, 275
 performance related to, 6–7
 and zoning out while reading, 219–220
- Metaconsciousness
 definition of, 222–223
 dissociation from consciousness, 203–204,
 216–217
 markers of, 222
 in processing of conscious processes, 8
 triggering of, 220–221
- Mindfulness, and zoning out while reading, 218
- Mind-wandering affecting task performance,
 204–205, 218. *See also* Zoning out while
 reading

- literature review of, 75–76
- and perceptual learning hypothesis, 77–78
- viewing distance affecting, 76, 77–78
- Skilled performance affected by conscious processing, 192
- Social judgments of reasonable conduct, 259
- Social referencing by adults looking at objects, 18–19
- Source of activation confusion models of information in memory networks, 194–195
- Standards for reasonable conduct, problems with, 251–252
- Statistical structure, and segmenting dynamic intentional action, 41–42
 - by infants, 48
- Strategy selection in problem solving, 7, 190–191
 - base rates of success in, 190
 - resource expenditure in, 193, 196–197
 - similar to comparison processes, 193
 - and transactional strategies to improve reading comprehension, 205
 - as unconscious act, 190
- Task-unrelated images and thoughts
 - awareness of, 208
 - factors affecting, 207
 - intentional, 208
 - unintentional, 208
- Task-unrelated images and thoughts (TUITs), 204–205, 207–208
- Temporal dissociation, 203–204
- Testimony by experts, problems with, 274–275
- Theory of mind
 - and development of knowledge about vision, 22
 - and folk psychology, 8, 13
 - functionally dissociable, 137
 - and inferences about action, 38
 - and intentional actions, 4, 132–133, 134
 - and knowledge monitoring, 5
 - and perspective taking, 3, 4
- Theory theorists, 14
- Tip-of-the tongue phenomenon, 189
- Tort law
 - allocating responsibility in, 251–252
 - basic purposes of, 251, 253–255
 - competing theories in, 254–255
 - corrective function of, 251, 253, 255
 - deterrence function of, 251, 253, 255
- Trace access hypothesis in feeling of knowing, 189
- Underconfidence about knowledge, predictors of, 247
- Underestimation
 - of information needed for explanatory knowledge, 240–241
 - of performance in picture memory task, 136
- Understanding
 - assessment during development, 237–240
 - of attention, by children, 25–26, 131
 - and illusion of explanatory depth, 241–243
 - lack of, monitoring of, 57
 - of vision, 3–5
 - level-1 and level-2 in, 22–25, 61–62
- Unreasonable conduct, determination of, 251–252
- Vision
 - development of knowledge about, 13–31
 - in children, 22–31
 - in infants, 14–22
 - and theory-of-mind development, 22–30
 - and extramission beliefs, 5–6, 24, 97–117, 129 (*see also* Extramission beliefs)
 - and mastery of object permanence tasks, 20
 - understanding of, 3–5
- Visual metacognition
 - and change blindness blindness, 126–129
 - and concept of intentional loop, 135–136
 - conservation of resources in, 196–197
 - and development of size constancy, 75–93
 - inaccuracies in, 187–188
 - interference from conscious processing, 192
- Visual perception. *See also* Looking
 - attention linked to awareness in, 121–122, 126
 - and change blindness (*see* Change blindness)
 - and cognitive supplementation hypothesis, 77–86
 - and expectations leading to coherent scenes, 134
 - extramission theory of, 24, 97–117

- information compared to conceptual information, 193–196
- input importance in knowledge acquisition, 26–30
- and knowledge of distance affecting object size and shape, 5, 25, 82–86
 - age-related changes in, 89–90, 91
 - individual differences in, 91
- level-1 and level-2 understanding of, in children, 22–25, 61–62
- and lexical ignorance awareness in children, 5, 57–71
 - picture recognition correlated with, 5, 66–67, 69
- and metacognition, 7
- overestimated completion of, 9
- properties of perceptual representation system, 195–196
- speed affecting change detection, 170, 173, 182
- Visual representations
 - children's reasoning about, 3–4, 13, 129–132
 - inadequacy of, and lexical ignorance awareness in children, 68, 71
 - individual differences in, 165–183
 - reasoning about (*see* Reasoning about representations)
- Word-cued awareness of lexical ignorance, in children, 58–59
- Zoning out while reading, 7–8, 203–223
 - and automatic versus controlled processing, 219
 - awareness of, 209, 212
 - and cognition versus metacognition, 219–220
 - and comprehension performance, 210, 212
 - and error detection in texts, 207
 - and eye movement control during reading, 213–215, 222
 - helpful aspects of, 221
 - implications of, 213–220
 - markers of, 221–222
 - and mindfulness, 218
 - previous research on, 204–208
 - recent research on, 208–213
 - and research on task-unrelated images and thoughts (TUITs), 204–205, 207–208
 - and situation awareness, 217–218
 - and triggering of metaconsciousness, 220–221
 - unawareness of, 209–210, 217
