

7 Pictorial Cues, Oculomotor Adjustments, Automatic Organizing Processes, and Observer Tendencies 87

Pictorial Cues	87
<i>Linear Perspective, Outline Shape</i>	87
<i>Relative Size</i>	89
<i>Texture Gradient</i>	90
<i>Height in the Picture Plane</i>	90
<i>Occlusion, Overlay, Interposition, or Superposition</i>	91
<i>Illumination and Reflectance Edges</i>	93
<i>Shading and Shadow</i>	93
<i>Aerial Perspective</i>	96
Information from Oculomotor Adjustments	97
<i>Accommodation and Convergence</i>	97
<i>Gradient of Focus</i>	98
<i>Eye Elevation</i>	98
Automatic Organizing Processes	98
<i>Figure-Ground Organization</i>	99
<i>Gestalt Organizational Laws</i>	100
<i>Apparent Motion</i>	102
<i>Induced Motion</i>	103
<i>Subjective Contours</i>	103
Observer Tendencies	104
Summary	105

8 Empiricist View: Perceived Size and Shape 107

Perceived Size of Afterimages	107
<i>Emmert's Law of Afterimages</i>	107
<i>Registered Distance</i>	108
Hypotheses of Invariance	110
<i>Size-Distance Invariance Hypothesis</i>	111
<i>Shape-Slant Invariance Hypothesis</i>	112
Perceived Size of Objects	113
<i>Measuring Perceived Size: Brunswick and Thouless Ratios</i>	113
<i>Size Constancy</i>	114
<i>Familiar Size</i>	115
<i>Perceived Visual Angle</i>	116
<i>Perceived Distance in a Scene</i>	117
Perceived Shape of Objects	118
<i>Shape Constancy</i>	118
<i>Familiar Shape</i>	118
<i>Distorted Room</i>	120
Noninvariance Perceptions	123
<i>S-Motion Demonstration</i>	123
<i>Moon Illusion</i>	127
Summary	130

9 Gibson's Psychophysics—Basic Concepts 131

Psychophysical Correspondence	132
Texture and Optical Texture Gradient	133
<i>Texture</i>	133

<i>Optical Texture</i>	133
The Ground and Perceptual Constancy	138
<i>Distance and the Layout of Space</i>	138
<i>Perceived Size and Distance</i>	138
<i>Size Constancy</i>	140
Intersection of Surfaces	141
<i>Corner</i>	141
<i>Edge</i>	141
Summary	144
10 Lateral or Parallax Motion	145
Motion Parallax	145
Optic Flow, Velocity Gradients	146
<i>Motion Perspective</i>	148
<i>Dynamic Occlusion</i>	153
Continuous Perspective Transformations	154
Summary	155
11 Motion in Depth	157
The Stimulus	157
<i>Size-Change</i>	157
<i>Expansion/Contraction</i>	159
Apparent Object Motions	162
<i>Kinetic Invariance Hypothesis</i>	162
<i>KIH and Size Constancy</i>	163
<i>Rigidity and the Implicit Scales of Space</i>	164
Movement of Perceiver	165
<i>Heading and Focus of Expansion</i>	165
<i>Time-to-Contact and Time-to-Passage</i>	166
Information for Controlling Activity	167
<i>Visual Kinesthesia</i>	168
<i>Balance and Stance</i>	168
Summary	171
12 Perceived Object Motions	173
Rotating Stimuli	173
<i>Rotating Trapezoidal Window</i>	173
<i>Kinetic Depth Effect</i>	174
<i>Stereokinetic Effect</i>	177
Johansson's Vector Analysis	177
<i>Unity Principle</i>	179
<i>Rigidity Principle</i>	179
<i>Common and Relative Vectors</i>	180
<i>Nonrigid Perceptions: Bending, Folding, and Stretching</i>	183
Computation or Artificial Intelligence Approach	184
<i>Patterns of Deformation: Differential Invariants of Optic Flow</i>	185
Summary	188
13 Detecting Motion	189
Motion in the Frontal Plane	189
<i>Linear Motion Detector</i>	191
