Ackermann, W., 87
Algorithm compression, 53–54, 222, 224–225, 261–262
Almost inconsistent theories, 42
Alpha Centaurians, 279–280
Anderlini, Luca, 287
Anti-functionalist, 8, 29–30, 35, 49–53, 55–56, 64, 71, 74, 77, 82, 84, 86–89, 91, 193, 266, 267, 303
Archimedean point, 179–180, 217, 221, 235, 243, 249–250, 259, 277, 301–303
Assertibility conditions, 253–254
Assignment of references function, 201, 211
Australian semantics, 203

Bayesianism, 286
Belief-fixation procedure, 247–248, 250
Bisimulations, 127, 232–233
 tool for modal invariance, 232
BLOCKHEAD algorithms, 258–259, 277
 for addition, 222, 260–261, 289
 infinitary algorithms, 222, 301
Block, Ned, 118
Bobick, Aaron, 269
Bohr electron case, 192, 245, 293
Boolos, George, 48
Boundary condition, 137–138, 142, 146, 149

Cambridge properties, 218
Carlson, Timothy, 43
Carnapian caution parameter, 213
Carnapian inductive logic, 59, 213–214
Carnap, Rudolf, 181, 225
Cenzer, Douglas, 231
Chalmers, David, 65, 118, 123
Chaotic behavior, 96, 114, 131–133, 136, 145–147
Charity in interpretation, 191–192
Chisholm, Roderick, 181
Chomsky, Noam, 200
Church, *Introduction to Mathematical Logic, Vol. 1*, 40
Cognitive holism, 284
COMP, 101, 107, 112–113, 120
Computable constraints on cooperation, 287
Computable equivalence relations, 227–231, 233–235, 240
 modal conditions defining, 233
 partial, 239
 psychologically unrealistic, 227, 229
 sub-equivalence, 233
 trivial, 228
Computable partitionings, 27, 214
Computational complexity theory, 14–15, 95–97, 105, 110, 125–127, 144, 154, 156, 163–165, 169–171
 EXPTIME, 14, 95–96, 105–106, 144

Computational complexity theory (cont.)
NP, 14, 105–106, 111–112, 125, 154, 298
P, 12–14, 38, 60–62, 64, 68, 73, 75–92, 94, 105–106, 114, 120, 123, 125, 144, 154, 202, 291, 297–298
P-hierarchy, 144
PSPACE, 111–112
Computational flow mergers, 130
Computational game theory, 287
Computational growth, 177, 180, 183, 199, 212–214, 220, 227, 230–231, 233–234, 240
Computational Liar, 61, 66, 68–69
Computational multirealization(s), 182, 184
of arbitrary intentional state, 101, 109, 228
Computational reduction, 18–19, 22, 25, 177, 179–180, 182, 198, 212–213, 215, 217, 219–221, 224, 228, 236, 251–253, 262, 272, 274
local, 19, 25, 177, 179, 213, 215, 217, 220, 228, 236
Computational state, 6, 18, 24, 25, 101–104, 107, 109, 110, 113, 116–117, 120, 122, 124, 129–130, 138–140, 142, 174, 176, 183–185, 212
intermediate, 109–110, 130
Computationalism, 13, 17, 25–26, 30, 150, 177, 181, 187, 190, 193, 195–197, 199–205, 209, 211, 215, 264, 274, 282, 284, 303
committed to Correspondence, 195–200, 205, 206, 208, 209
committed to metaphysical realism, 177, 187, 193, 195–197, 199–201, 204, 208, 211
scientistic doctrine, 25, 187, 205
Conflicting statistical generalizations, 282
CON(PA), 10, 30, 31, 39, 85–87
Content growth, 177, 180, 183, 184, 187, 189, 199, 230, 233, 234
Copeland, B. J., 118
Coreferentiality, 21–25, 30, 180, 181, 192, 198, 201, 218, 221, 223–225, 241–251, 254–259, 261–262, 264–267, 275, 277, 288, 301
Coreferentiality decisions, 22, 23, 30, 180, 181, 192, 198, 201, 218, 221, 223–225, 241–245, 247, 249–251, 254–259, 261–262, 264–267, 275, 277
Counterfactuals about computations, 15, 118, 122, 130

Danto, Arthur, 68
Davidson, Donald, 241
Defeater relations, 55
Deletion of pairs, 116
Dennett, Daniel, 156
Descriptive complexity theory, 18, 106, 164
Discounting beliefs, 190
DISJUNCTION, 49–50
Double recursion theorem, 173–175
Dummettian justification, 70
Dummett, Michael, 70
Duplication property, 236

E_1-elementary substructures, 43
EGM (epistemic claims that are consequences of Gödel refutations of mechanism), 45, 47–52, 54–57, 59, 74, 75, 77–82, 87, 92–94, 97
Entrenchment orderings, 286
Environment totalism, 244–246, 250, 256, 264
Epistemically shielded, 99, 132–133
Epistemic conception of truth, 291
Epistemic modality, 10–13, 31, 33–35, 37–40, 44, 47, 49–55, 59, 72–76, 78, 81–84, 86, 88, 91–92, 207–209, 211

Epistemic semantics, 13, 30, 177, 181, 187, 190, 193, 196–200, 211, 223, 226, 264
Epistemology of mathematical proofs, 27
Equivalence relations, 227–236, 239–240
 modal conditions defining, 233
Existential second–order Boolean queries, 106

Fagin, Ronald, 106
Feasible arithmetic, 41–43
Feferman, Solomon, 64
Field, Hartry, 268
Finitary computing machine, 62, 72, 81, 83–84, 86–87, 90–91
Finitary proof system, 39–40
First incompleteness theorem, 11, 61
Fodor, Jerry
 fridgeons, 285
 information unencapsulation, 247
 isotropy, 247–249
 Modules, Frames, Fridgeons, Sleeping Dogs and the Music of the Spheres, 284
 The Modularity of Mind, 192, 247
 version of frame problem, 273, 283–285, 293
FRA (finite recursive approximation), 150–156
Frame problem, 273, 283–287, 293
Functionalism, 1–2, 5–10, 13, 16–18, 27, 29, 32, 35–36, 41, 44, 47, 58, 92, 93, 97, 115, 128, 145, 149, 171, 177–179, 181–183, 185, 197, 204, 211, 215–221, 251, 255, 265, 267, 276, 280, 281, 292, 296, 298, 299
 analytic, 6
 causal-theoretical, 6–7
 computational, 1, 6–10, 13, 16, 18, 27, 29, 41, 47, 92–93, 97, 115, 145, 149, 171, 177–179, 185, 197, 204, 211, 215, 217–221, 251, 255, 265, 267, 292, 296, 298
 scientific, 6

Gale, David, 140
General intelligence, 13, 22, 23, 30, 75, 190–193, 196, 223, 226, 243, 245, 247, 250–254, 262, 264–266, 274–275, 277, 278, 284, 291–293, 301

Strong TRIV, 109–112
Subjective probability metric, 185
Supervenience, 107–108, 113–115, 117–118, 202
Synonymy determination (SD), 21–24, 184, 186–194, 196–198, 201, 221, 223–225, 231, 241–243, 245, 249–251, 255–258, 261–262, 264–267, 275, 277–278, 299

Tangled chains, 55
Tarski, Alfred, 63
Temporal counterfactuals, 121
Theory totalism, 246–250, 256, 261, 264–265
Thermodynamic phase transitions, 238
Thomason, Richmond, 63, 65
Three-dimensional network of possibilities, 55
TOTALITY SCHEMATA, 302
Trial-and-error predicates, 59
TRIV, 101, 102, 104, 107–116, 118–120
Trivial computation, 97, 103, 114–115, 129, 131, 133, 135, 143–144, 150
Trivialist, 96, 97, 103, 104, 114, 118–119, 125, 134–136, 142–145, 157, 174, 175
Triviality, 1–2, 13–17, 26–27, 95–100, 102–103, 118–120, 122–125, 127, 129–130, 133–137, 139, 144–145, 147–151, 157, 160
counterfactual objection to triviality arguments, 118–120, 148, 157
P-, 129, 135, 136, 139–140, 145, 148–151, 157
S-, 102–108, 110–114, 116, 118–121, 124, 126, 129, 133, 148, 150, 151, 154, 157
step-function, 15–16, 149–150
strong S-, 108, 113
Triviality arguments, 13–15, 95, 97–99, 118
and Kripke-Wittgenstein problems, 15, 96, 99, 114, 116, 124, 130–131, 133–136
and skepticism, 98–99
Triviality Lemma, 145, 147–149
Triviality Theorem, 15, 26–27, 97–99, 129, 137, 139, 144–145, 148–149
Truncated arithmetic, 43–44
Truth conditions, 68, 253
Truth-conditional semantics, 193
Turing machines, 43, 48, 105, 110, 212, 221, 296
Turing model of computation, 212
Twin-Earth arguments, 298

Ugly Duckling Arguments, 268–275, 279–280, 282, 286–287, 289, 291–294, 297–298, 303
Ugly Duckling Theorem, 269–270
Ultimate parts, 202–204
Ultimate reality, 25, 201–204
Unassailable belief, 65–66, 68
Undecidable problem, 144

Valuation function, 201
Vico, Giambattista, 290
 humanity of, 268

Warranted assertibility, 84, 206, 252–254
 idealized, 253–254
Watanabe, Satosi, 270
Weak method, 75, 78, 83–84, 86, 88
Weinstein, Scott, 236
Willard, Daniel, 32, 43–44
Wittgenstein, Ludwig, 27, 34, 134
