Subject Index

- Age class models, xx, 8
 - carbon policies, 224–227
 - competing land uses, 222–224
 - consumption equations in, 217
 - cyclical stationary states, 221–224
 - harvesting rule, 217–218
 - optimal consumption paths, 221–222
 - optimal harvesting rules, 226–227
 - taxation in, 234
 - theoretical structure, 215–218
 - uneven-age class models (*see* Uneven-aged forestry)
 - upgrowth and ingrowth, 229–230
 - utility vs. rent maximization, 218
 - steady states, 221–222
- Aggregate risk, 258
 - public vs. private consumption, 260–261
- Allowable cut, 7
- Altruism, 99–101
- Amenities, xvii, 44
 - as ecosystem services, 267–270
 - catastrophic risk, 278–285
 - marginal valuation, 47
 - valuation functions in Hartman model, 46–48
 - mathematical specifications, 48–50
 - valuation function in two-period model, 90–91
 - mathematical specifications, 91
- Arrow-Pratt measure of absolute risk aversion, 245
- Austrian cameral valuation method, 7
- Austrian sector, 115
- Bang-bang solutions, 85, 325
- Bellman equation, 326–328, 302–303–305
- Beneficial use, 147
- Bequests (inheritance), 99–100
 - monetary vs. timber, 100
 - and optimal taxation, 130–135
- Bequest taxes, 100–104, 131–135
- Biodiversity, xix, 185, 187–188
 - benefits, 199–200
 - socially optimal management, 200–202
- Boundary conditions, in stopping problems
 - smooth pasting, 304
 - value matching, 304
- Brownian motion
 - definition, 296, 313
 - with drift, 296–298
 - geometric, 296–298, 305, 307, 310, 315
- Capital market imperfections (borrowing constraints), 105–106
- Carbon sink, 72
- Carlowitz, Hans Carl von, 4
- Catastrophic risk
 - arrival rates, 268–269
 - dependent on stand age, 275–278
 - independent of stand age, 270–275, 278–282–283
 - costly protection, 288–291
 - events and risks, xxi, 267
 - Faustmann model, 270
 - partial stand destruction, 286–288
 - Poisson process, 267
 - stochastic process, 267
 - stochastic rotations models, 313, 318
- Certainty equivalent consumption, 245
- Commitment, 114
- Comparative dynamics, 326
- Concessions, 146
 - definition, 147–148
 - optimal concession policy, 153–154, 160, 161
- Conservation networks, 187–189
- Conservation reserve program, 190
- Continuation region, 302–303
- Convention on Biological Diversity, 185

- Corner solutions (vs. interior solutions), 358
- Corruption, 146, 150–151, 154–160
 - bargaining for bribes, 151, 155–156, 161, 162, 180
 - bribes, 151, 155, 157–158, 161
 - logging inspectors, 151, 156, 158, 161
- Cost functions, 35
- Count Reventlow, 5
- Culmination principle, 11, 24–26
- Current annual increment (CAI), 14–17, 24
- Deforestation, xix, 4, 160, 180
 - causes, 149–152
 - definition, 146, 174
 - dynamic models, 343–344
 - forms, 146–149
 - commercial harvesting / concessions, 147
 - fuel collection, 159
 - illegal logging, 148
 - land conversion, 147
 - insecure property rights, 160, 163, 165–179
 - via land rents, 175, 176, 177–178, 179
 - rates, 145
- Diameter class models. *See* Uneven-aged forestry
- Diffusion
 - process, 297
 - stochastic parameter, 296
- Distortionary (tax), 114
- Duality, 35–37
- Dynamic programming, xxiii, 326–328
 - applications of, 343–348
 - deforestation, 343–344
 - discrete stochastic, 300
 - forward solutions, 327
 - old growth forests, 343–345
 - perfect foresight, 343–347
 - recursive solutions, 327
 - stochastic, 348–349
- Dynamic efficiency / inefficiency (OLG models), 132–133
- Dynamic Lagrange method, 219, 336
- Ecosystem services, 45–46
- Endangered species
 - act, 189
 - red-listing, 189
- Enforcement, 146, 148, 150
 - costs of auditing, 153, 162
 - finest, 153, 158, 162
 - private: cite investment, 169, 171, 177–178, 180
 - probability of detection, 151–152, 153, 162, 178
 - public, 169, 170, 177–178, 180
- Enforcement, public vs. private, 177–178
- Envelope theorem (derivation), 355
- Expected utility hypothesis (EUH), 240, 243–244
- Expropriation risk, 165, 170, 175
- Environmentally sensitive logging, 148
- Euler equation, 83
- Even-aged forestry, 12
- Even flow, 213–214
- Expectation value (soil, land, bare), 19–23
- Expected utility hypothesis, 239, 240, 243
- Expropriation risk, 164, 165, 170, 175–176
- Extensive margin, 171–173
- Externality, 45, 125, 130, 152
- Faustmann
 - age class-based rules, 227
 - assumptions, 18
 - catastrophic risks, 270–278
 - comparative statics in Faustmann model, 26–28
 - competing land uses, 35–37
 - duality, 35–37
 - forest management effort, 33–35
 - formula, xvii, 6, 11, 18–23, 84
 - forest taxation in, 32
 - harvesting rule, 21–22
 - Martin, xvi, xvii, 6, 113
 - optimal rotation age, 21
 - optimal consumption path, 41
 - stochastic, 310–315
- Fernow, B., 5
- Fiscal federalism, 105
- Fire risk, 267–269, 271, 275–276, 284–285, 288–291
- First-best taxation design, 113. *See also* Optimal taxation
