
Acknowledgments

I like trees and people, difficult intellectual discussions, and good research. Thus I have been fortunate to be part of an extraordinarily talented group—the Human Interaction with Nature and Technological Systems (HINTS) Laboratory—at the University of Washington. Current and recent members include Brian Gill, Nathan Freier, Rachel Severson, Jolina Ruckert, Aimee Reichert, Solace Shen, Heather Gary, John Lin, Cady Stanton, Nicole Kennerly, and Lorin Dole. Earlier members also include Jennifer Abdo, Irene Alexander, Erin Fowler, Amanda Ryan, Brandon Rich, Jeff Anderson, Louise Wun Choi, Jesse McPherron, Scott Santens, and Jonathan Sabo.

Thanks, too, to many members of the Value Sensitive Design Group, directed by Batya Friedman, and including Alan Borning, Lisa Nathan, Janet Davis, Shaun Kane, and Pedja Klasnja.

Brian Gill directed most of the statistical analyses that underlie the empirical results I report on in chapters 4 through 10. Mike Eisenberg (Dean Emeritus of the Information School at the University of Washington) solved numerous problems that enabled the research. Solace Shen assisted ably with manuscript preparation.

My daughter, Zoe Kahn, helped me think through some of the ideas and offered practical advice.

Barbara Dean provided helpful comments on many of the chapters, and for decades we have discussed many of the ideas of this book and more.

I extend thanks to other colleagues for our long-standing intellectual discussions, including Gene Myers, Carol Saunders, Hiroshi Ishiguro, Takayuki Kanda, Gail Melson, Alan Beck, Karl MacDorman, Cecilia Wainryb, Charles Helwig, Judi Smetana, and Larry Nucci. Thanks to

Melanie Killen for encouraging my research when it was emerging, and when its contributions were not as readily apparent to others. Elliot Turiel was my graduate advisor and mentor at the University of California, Berkeley, during the 1980s. His influence can still be felt throughout much of this book, and it is still appreciated. Thanks to my editor at MIT Press, Clay Morgan. This is my third book with him.

Patricia Hasbach provided insights into several of the difficult conceptual chapters of this book within the context of our new project on the rewilding of the human species.

Thanks to Ephraim Glinert, William Bainbridge, and Suzi Iacono at the National Science Foundation. The research reported in this book has been supported by the National Science Foundation under grant nos. IIS-0102558 and IIS-0325035. Any opinions, findings, and conclusions or recommendations expressed in this book are mine and do not necessarily reflect the views of the National Science Foundation.

My empirical research is collaborative, as research of this scope often is. I extend thanks to my collaborators and to others who assisted with the research reported in the following empirical chapters.

A Room with a Technological Nature View (Chapter 4)

My collaborators were Batya Friedman, Brian Gill, Jennifer Hagman, Rachel L. Severson, Nathan G. Freier, Erika N. Feldman, Sybil Carrère, and Anna Stolyar. Judith H. Heerwagen, Gordon H. Orians, and James A. Wise were involved in early discussions about this research.

Office Window of the Future? (Chapter 5)

Batya Friedman was the lead author. My other collaborators were Nathan G. Freier, Peyina Lin, and Robin Sodeman.

Hardware Companions? (Chapter 6)

My collaborators were Batya Friedman and Jennifer Hagman. Kathleen Crosman and Joseph Goldberg assisted with data entry, and Ann Hendrickson assisted with reliability coding. Pamela Hinds and Sara

Kiesler provided substantive comments on an earlier version of this reported research.

Robotic Dogs in the Lives of Preschool Children (Chapter 7)

My collaborators were Batya Friedman, Deanne R. Pérez-Granados, and Nathan G. Freier. Jeff Anderson, Norma Barajas, Adrian Guzman, Annie Hendrickson, Josh Kienitz, Ilene Lewis, Sandra Yu Okita, Rachel L. Severson, and Tyler Stevens assisted with data collection. This research was funded, in part, by (a) a grant from the University of Washington's Center for Mind, Brain, and Learning and the Talaris Research Institute and Apex Foundation, the family foundation of Bruce and Jolene McCaw to P. H. Kahn, Jr., and B. Friedman, and (b) a gift from Intel Corporation to B. Friedman and the Information School at the University of Washington.

Robotic Dogs and Their Biological Counterparts (Chapter 8)

Gail F. Melson was the lead author. My other collaborators were Alan Beck, Batya Friedman, Trace Roberts, Erik Garrett, and Brian Gill. Brian Gilbert, Migume Inoue, Oana Georgescu, and Jocelyne Albert assisted with data collection, transcript preparation, and coding.

Robotic Dogs Might Aid in the Social Development of Children with Autism (Chapter 9)

Cady M. Stanton was the lead author. My other collaborators were Rachel L. Severson, Jolina H. Ruckert, and Brian T. Gill. Advanced Telecommunications Research, and specifically Norihiro Hagita, Hiroshi Ishiguro, and Takayuki Kanda, provided use of their debugger software system, which we used for reviewing video footage and coding data. Earl Wilson was involved in discussions about autism at various phases in this research. Thanks, too, to Daniel Glick, Heidi Shaw, and students at Yakima Valley Community College and Children's Village and the Autism Resource Team of Yakima, Washington. Along with support from the National Science Foundation, acknowledged earlier, this

research was supported, in part, by a University of Washington Mary Gates Undergraduate Research Scholarship to Cady M. Stanton.

The Telegarden (Chapter 10)

My collaborators were Batya Friedman, Irene S. Alexander, Nathan G. Freier, and Stephanie L. Collett. Thanks to Ken Goldberg and Hannes Mayer for providing us with the Telegarden chat data. Brian Gill, Erika N. Feldman, Jonathan Sabo, and Nicole Gustine assisted with aspects of this project.

Some of the material draws from my previously published peer-reviewed papers, listed below. The material is reprinted with permission from the publishers.
