## Acknowledgments

This volume has been over three years in the making. It is the product of iterated interaction among the book's editors and participating authors, and it has benefited from a host of other commentators, discussants, and peer reviewers. In May 2006 we organized the public conference and authors' workshop Climate Change Politics in North America in Washington, D.C., at the Woodrow Wilson International Center for Scholars (WWICS). At this event, authors presented first drafts of their chapters. We are grateful for conference funding from the Embassy of Canada (Washington, D.C.), the Energy Foundation, and WWICS's Canada Institute and the Environmental Change and Security Project.

The authors and editors received valuable feedback from a series of commentators (academics, practitioners, and policy advocates). We would like to thank all who attended the conference for their participation and engaging questions, comments, and critiques. The participants, who contributed much to our discussions, included Tim Kennedy (Global Public Affairs), Julie Anderson (Union of Concerned Scientists), Truman Semans (Pew Climate Center), Andrew Aulisi (World Resources Institute), and Joseph Dukert (independent energy analyst). We are extremely grateful to the staff of the Canada Institute and the Environmental Change and Security Project for their hard work and invaluable input, especially David Biette, Geoff Dabelko, Katherine Ostrye, and Christophe Leroy. Also, our thinking on this volume and every contribution benefited from the careful attention and stewardship of Clay Morgan of the MIT Press, the series editors Sheldon Kamieniecki and Michael Kraft, and three extremely detailed, informative, and challenging anonymous peer reviews.

Henrik Selin would like to thank the Department of International Relations at Boston University and the European Commission's Jean Monnet program for financial support. Stacy D. VanDeveer is grateful for funding from the Department of Political Science and the College of Liberal Arts at the University of New Hampshire, the University of New Hampshire's Ronald H. O'Neal professorship, and the

European Commission's Jean Monnet program. We are both grateful to the Carbon Solutions New England project based at the University of New Hampshire and the many individuals in the United States, Canada, and Mexico who made time to be interviewed during the course of the research.
