# Index

- Abbate, Janet, 10, 61, 142
- Address space exhaustion, 33. See also Shortage of Internet addresses
- Adobe, and royalty-free licensing, 215
- ADSL (Asymmetric Digital Subscriber Line), 167
- African Network Information Centre (AfriNIC), 162
- Aitken, Hugh, 183
- Alder, Ken, 122, 137, 193
  - quoted, 25
- “Allocation” vs. “assignment,” 145, 162
- American National Standards Institute (ANSI), 224
- American Registry for Internet Numbers (ARIN), 145, 160, 164, 165
- Annan, Kofi, 167–68, 176
- Anonymity, and embedding of
  - hardware address, 80–81, 82. See also Privacy
- APNIC (Asia Pacific Network Information Centre), 160
- Appletalk protocols, 37, 55
- ARIN (American Registry for Internet Numbers), 145, 160, 164, 165
- ARPANET (Advanced Research Projects Agency Network), 119
  - and interface message processors, 56
  - and network addresses, 141–42, 152, 183
  - and Postel, 143
  - and RFCs, 26
  - and TCP/IP, 27
- Asia Pacific Network Information Centre (APNIC), 160
- “Assignment,” vs. “allocation,” 145, 162
- Asymmetric Digital Subscriber Line (ADSL), 167
- Asymmetry of assignment, in
  - distribution of Internet addresses (address-to-host ratio), 150–52
  - geographical distribution, 159–60
- ATM (Asynchronous Transfer Mode), 47, 58
- Australia
  - in APNIC, 160
  - open standards policies in, 211–12
- Balkin, Jack, 10
- Barlow, John Perry, 13
- Belgium, open standards policies in, 211–12
- Benkler, Yochai, 10, 11, 222
- Berkeley Software Distribution (BSD) operating system, 102
- B-ISDN (Broadband Integrated Services Digital Network), 47
- Bit mask, 156
- Bluetooth wireless, 7, 8
- Boeing Corporation, on IPng, 55–56, 56n.82, 152

- BOF group, 50
- Bolt, Beranek and Newman (BBN), 44, 56, 152
- Bradner, Scott, 51, 53–54, 59, 62, 65, 66
- on IAB participation, 60
  - and ISO, 64
  - and modification of CLNP, 66
- Brazil, open standards policies in, 211–12
- Broadband Integrated Services Digital Network (B-ISDN), 47
- BSD (Berkeley Software Distribution) operating system, 102
- Bush, George W., and Bush administration, 117, 174, 179
- Cable companies, 57, 58
- Callon, Ross, 43–44, 59, 67
- Carpenter, Brian, 51, 59, 60
- CATNIP (Common Architecture for the Internet), 60, 61–62, 64, 65–66
- Cellular Digital Packet Data (CDPD) consortium, 58
- Cellular telephony, 57, 58. *See also* Mobile telephony
- frequency reuse in, 36
- Center for Democracy and Technology (CDT), 84, 92–93
- Internet Standards, Technology and Policy Project at, 10–11, 92
- Cerf, Vinton
- and IAB, 26, 27
  - at IAB-IESG meeting, 31
  - on Internet architecture retreat, 32–33
  - and ISOC (Internet Society), 42, 48
  - and Postel, 143–44
  - quoted, 1
- CERT (Computer Emergency Response Team), Department of Homeland Security (originally Computer Emergency Readiness Team), 19, 127, 137, 195
- Chander, Anupam, 10, 146
- quoted, 139
- Chapin, Lyman, 42, 44
- Chiappa, Noel, 52–54, 53
- China
- in APNIC, 160
  - IP address space of (vs. Stanford), 154–56
  - IPv6 program of, 4, 97, 109–10, 130
  - standards strategy of, 205, 206, 211–12
- China Education and Research Network (CERNET) IPv6 test bed, 109
- China Internet Network Information Center (CNNIC), 160
- CIDR (classless interdomain routing), 3, 40, 156–57, 183, 184
- Cisco Systems, 102, 109, 112, 113, 117, 126, 127
- Civil liberties. *See* Privacy; Values
- Clark, David, 27, 31, 32–33, 36, 47, 59, 60, 227
- Clarke, Richard, 114
- Classless interdomain routing (CIDR), 3, 40, 156–57, 183, 184
- Class system, in address distribution, 147–50, 151
- Clinton administration, 57
- CLNP (ConnectionLess Network Protocol), 43, 44, 45, 49
- and CATNIP, 61
  - and TUBA, 50, 62
  - technical weaknesses found in, 65–66
