Acknowledgments

Although the bulk of this book was written during the period 1996–1999, some material appeared in print earlier than 1996, and revisions were made up until 2007. Thus there has been ample time for teachers, colleagues, students, friends, and anonymous reviewers to make suggestions and criticisms that have had a constructive impact on this book (and ample time for me to forget some of their contributions). As it is impossible to acknowledge all these contributions, below are the names of those who get the lion's share of the credit.

My long-time mentor, Sylvain Bromberger, contributed to my appreciation of the importance of types, especially in linguistics. Although our views diverge in significant ways, his early platonic views about types informed my own view. He raised the question of the relationship of types to their tokens, and his later nominalist views about types served as a foil to my own platonist views. He has commented generously on drafts for encyclopedia entries I've published on types and tokens, and most importantly, he has offered his invaluable comments on this book at an American Philosophical Association's "Author Meets Critics" session.

Over the years I've been much influenced by my thesis supervisor, Dick Cartwright, both for his general approach to metaphysics, with its careful scrutiny of ordinary and scientific language, as well as for his platonism. He kindly lent me his unpublished lecture notes on abstract objects, which opened my eyes to the diversity to be found among abstract objects and enlightened me on the difference between tokens and occurrences. Along with Dick Cartwright, the late George Boolos effectively turned me into a platonist with his comments on one of my early efforts defending, of all things, nominalism. His guidance, concern, and support over the years were invaluable. The late Jerry Katz lent a sympathetic, patient, platonist ear over the course of many discussions and arguments. His unabashed platonism served as a foil to my more abashed platonism.

I owe a debt of gratitude to my mentor and sometime colleague, Michael Jubien, for support and evaluation of my work over the years, and for chairing the “Author Meets Critics” session at the APA. I am also indebted to Takashi Yagisawa, who organized and participated in the session, and to Bruce Aune and the late Greg Fitch for their copious and helpful comments at the session. Thanks also to my colleagues Wayne Davis and Steve Kuhn, who obligingly critiqued earlier drafts of this work and provided a wealth of useful advice and support over the years.

Lon Berk read the book in its entirety, providing striking insights and unwavering encouragement. At a meeting of the Society for Exact Philosophy, Mike Dunn provided helpful comments on my work on occurrences of expressions and encouraged me to extend the work to other sorts of types, which resulted in chapter 7. The late David Lewis also provided invaluable feedback on this chapter. I am indebted to Ned Markosian for his comments on “On Words,” when it was first published in *Journal of Philosophical Research*; to Palle Yourgrau and Ned Block for helpful comments; and to audience members at Georgetown University, MIT, the City University of New York, and the APA “Author Meets Critics” session.

I am most grateful to Georgetown University for the sabbatical and other paid leaves that allowed me to finish and revise the book. Thanks, Dean Jane McAuliffe and Wayne Davis, for your support! My thanks also go to numerous Georgetown University students over the years, especially Matt Burstein, Heath White, and Matt Rellihan for their constructive comments and criticisms, and to Joseph Rahill for editorial assistance.

Much credit goes to the four anonymous reviewers for the MIT Press, who must have read the manuscript very carefully indeed to give me such thoughtful and extensive comments.

Credit goes to the Philosophy Documentation Center for permission to reprint some material in chapters 3 and 6 that originally appeared in *Journal of Philosophical Research*, and to Kluwer Academic Publishers for permission to reprint material in chapter 5 that originally appeared in *Philosophical Studies* and material in chapter 7 that originally appeared in *Journal of Philosophical Logic*.

And last but not least I am grateful to my husband, Lon Berk, our children Cassidy and Norah Berk, and my father Bill Wetzel for their support and understanding during the most difficult periods of this undertaking.
