## Acknowledgments

I began work on this book more than a decade ago and have accrued many debts since then. Funding to undertake and complete a doctoral degree was provided by a Sydney University Traveling Scholarship and by Princeton University. Grants for language study in Germany were supplied by Princeton's History Department and its Council for Regional Studies. Material support for research and writing has been provided by the Deutscher Akademischer Austausch Dienst (DAAD), the National Science Foundation (under award 0140149), the Deutsches Museum in Munich, the Max Planck Institute for the History of Science in Berlin, and the Department of Science and Technology Studies at Cornell University. Archivists at the Deutsches Museum in Munich have been extraordinarily helpful, and it is a pleasure to thank them. Publication of the book has been supported by a grant from the Hull Mentorial Publication Fund of Cornell University.

I have been lucky in enjoying the support and guidance of a number of advisors and mentors. Ian Johnston and Michael Shortland set me on the path toward work in the history of physics by co-supervising an honours thesis at the University of Sydney. Alan Chalmers shaped my ongoing interest in blending the history and philosophy of science. I hope he can see his stamp in this book. At Princeton, I benefited enormously from discussions with the now sorely missed Gerry Geison and Mike Mahoney. Angela Creager taught me, by advice and example, more about being a scholar and a teacher than I can properly acknowledge here. Norton Wise, most simply, taught me how to think like a historian. He and Elaine remain ongoing resources for a life in academia and elsewhere. Otto Sibum has served as both a reader for my dissertation and as a post-doctoral supervisor. This book is immeasurably better for his intellectual openness and acumen. I could not ask for better colleagues than those in Cornell's Department of Science and Technology Studies. They have provided an intellectual environment at once stimulating, critical, and supportive. I am particularly indebted to Peter Dear, who read every page of my manuscript and whose insights, corrections, and requests for clarification have always made for better work.

Portions of the book have been presented in a number of different settings. For their comments, I am indebted to Eric Ash, David Aubin, Charlotte Bigg, David Bloor, Graham Burnett, David Cahan, Kristian Camilleri, Cathryn Carson, David Cassidy, Jamie Cohen-Cole, Jeroen van Dongen, Moritz Epple, Clayton Gearhart, Mike Gordin, Tony Grafton, John Heilbron, Mary Henninger-Voss, Michel Janssen, David Kaiser, Dan Kevles, Ursula Klein, Ron Kline, Kevin Lambert, Manfred Laubichler, Molly Loberg, Mike Lynch, Suzanne Marchand, Ole Molvig, Tania Munz, Cat Nisbett, Kalil Oldham, Trevor Pinch, Rebecca Press-Schwartz, Sarah Pritchard, Jürgen Renn, Simon Schaffer, Arne Schirrmacher, Skuli Sigurdsson, Arlan Smith, Helen Tilley, Helmuth Trischler, Jay Turner, Heidi Voskuhl, Matt Wisnioski, and Stefan Wolff. I am grateful to Margy Avery and Paul Bethge at the MIT Press. Thanks also to Robert Schombs for preparing the index.

I owe a special debt to Richard Staley for helping me think through many of the themes explored in this book, in particular the ways in which history functions simultaneously as an actor's and an analytic category. Andy Warwick's work has been a model for my analysis of Munich's pedagogical culture. His engagement with my project over the years has been crucial to its development. *Crafting the Quantum* would never have made it past the manuscript stage had it not been for Jed Buchwald's support and editorial eye. Without Michael Eckert's exemplary scholarship on Sommerfeld, the book could never have been attempted. For this, and for his unstinting personal and intellectual generosity, I am deeply in his debt.

Much of my gratitude is due to those who read comparatively little of the manuscript but whose friendship made its writing both possible and enjoyable. Thanks to Lisa Bailey, Celia Bloor, Scott Bruce, Holly Case, James Cunningham, Anne Lester, Vlad Micic, Ellie Pridham, Carol Smith, Jay and Darcy Turner, Donald Williams, and Chuck Wooldridge. My one sadness in finally completing this project is that my mother—the person who would be most proud to see it—cannot be here to share in the celebrations. My siblings, Sanjay and Vanita, have been, since childhood, my closest friends. Some debts cannot be articulated, let alone acknowledged, but my love for you both is boundless. Any place where I have visited Raju and Nishad has felt like home, complete with chaos, laughter, and long conversations. My father has encouraged me in all my endeavors. I hope that some of his profound skill as a writer has made it into these pages.

I dedicate this book to my wife, Aminda Smith. She has shared the entirety of my life in academia. More importantly, she has shown me how many lives there are beyond its walls.
