## Index

- absorption, state of, 310–311, 312–313, 325–326n35  
versus flow, 312  
following voluntary attention, 317  
internal, 400–401, 402–403  
achievement motivation, 200–201  
Ackerman, Joshua, 17  
action  
versus activities, 237–238  
adjustment of, 126–127  
action planning and, 128–130  
attention and performance of, 159–160  
in cognitive control, 142  
deliberative, 8–9  
drivers of, 242–243n7  
effort and, 1  
facilitating perception, 340–341, 342  
formality in, 237, 238–239, 240–241  
intentional control of, 121–136  
nonagentive, 14  
operation and, 289–290  
orientation of, volatility-persistence component of, 200  
perception and, 340–342  
syntax of, 9–12, 240–241  
action-at-a-distance effect, 231  
action-awareness merging, 205, 306, 312  
action motivations, 342–344  
action planning  
action adjustment and, 128–130  
neural pathways for, 126–127  
perception and, 133–134  
perceptual events and, 124–125  
visual processing and, 128–130  
action-related processing, 125–127  
action representation, driving attention, 10–11  
activity, 293. *See also* expertise, skills and syntax  
versus action, 237–238  
attention as act of, 302–305  
complex, 290  
degree of syntax of, 237–238  
domain of, 10–12, 16–18, 20, 28n2, 51, 58, 65, 66, 68, 108, 209, 210, 212, 224, 227, 228, 232, 243n7, 251, 258, 345, 352 (*see also* contextual structure of reference)  
excitation of, 306  
in flow experience, 287–319  
gestalt, 293–294, 295, 315  
motive in, 289  
object of, 289  
as object of attention, 296–302  
organism level of, 295  
person level of, 15  
polymotivated, 289  
psychological theory of, 288–296, 321n11, 323–324n24  
simple, 289–290  
structure of, 289–290  
unit of, 322n14  
value-related, 324n28

- Activity Experience Scale, 206  
 activity-level attention, 308–314  
 adaptation, attention in, 179–180  
 adaptive unconscious, 277n7  
*ADS. See Aperture, Draw, Syntax model of attention*  
 affect coordination, 212, 337  
 agency,  
   ethics and, 15  
   intentional, 16  
   research on, 12–15  
   sense of, 13  
 agent  
   of attention, 305, 324  
   individual, 14  
   moral, 249, 265  
   multimodal, 16  
   rational, 15  
   social, 14  
 allocentric perspective, 378–379  
 receptive, 403–404  
 in stroke patients, 379–382  
*Analects (Confucius)*, 248, 275, 279n33, 279n35–n36  
 virtue ethics in, 268–276  
*anatta*, 392–393  
 Anscombe, G. E. M., 267–268  
 anterior cingulate cortex (ACC)  
   activity of in demand-based decision making, 107  
   in conflict monitoring, 115–116  
   demand level and activity of, 109  
   demand monitoring by, 107–108  
   demand-related bodily arousal and, 111–113  
   lesions of in subjective feelings, 411–412  
 apertures, 224–227  
 draw  
   implications of, 234–241  
   limitations of, 241–242  
   diffuse attention, 225–229  
*Aperture, Draw, Syntax model of attention*, 220, 226–229, 234–236, 240–241  
 Aristotle, 248, 250, 268, 306  
 categories of, 256–257  
 arousal, 220, 409  
 attention and, 392, 404  
 demand-related, 111–113  
 in flow experience, 206–207, 211  
 high level of, 354  
 hypnotic, 254  
 inhibition and, 300  
 joyous, 18  
 physiological/bodily, 111–112  
 valence and, 206  
 associations, systems of, 299–301  
 associative maps, 226–227  
 associative processing, 65–66, 67  
 atherosclerotic process, flow and, 213  
 athlete burnout syndrome, 171  
 attachment style  
 anxious-ambivalent, 38–39  
 avoidant, 38–39  
 attention. *See also dorsal attention system*, effortlessness; emotional attention; executive attention; flow; visual attention  
 as act of activity, 302–305  
 action control and, 127–128  
 action representation driving, 10–11  
 activity approach to, 287–319  
 activity as object of, 296–302  
 anticipated cognitive demand and, 103–116  
 apertures of, 224–229  
 in autotelic activity, 305–318  
 awareness and, 355–357  
 beam-of-light metaphor for, 225–226  
 bottom-up versus top-down influences on, 30  
 cognitive draw and, 229–232  
 cognitive schemas in, 318  
 concentration characteristic of, 322–323n17  
 contextual structures of reference and, 227–229  
 coordinative and administrative functions of, 122  
 current theories of, 6

- in daily life, 181–186  
decreasing objective effort during, 7  
definition of, 297  
diffuse, 222  
as aperture, 225–229  
versus selective attention, 223–224  
distributed representations and common coding of, 123–125  
divided, 242n1, 242n5  
draw of, 11–12, 229–232  
drivers of, 227–232  
early onset, 15  
effortful, 1, 135–136, 354  
control of, 29–47  
objectivist self and, 248–249  
effortless, 19. *See also* effortlessness; flow automaticity and, 186  
conditions for, 186–188  
in Confucian virtue ethics, 268–276  
control of, 33–34  
in decision making, 8  
definition of, 5  
direct path to, 188  
in early Chinese thought, 247  
enhancement of, 188  
in everyday life, 179–188  
indirect path to, 188  
individual differences in, 412–415  
interest and, 220–221  
laboratory research on, 11  
mechanisms of, 159–160  
neurocognitive underpinnings of, 161–165  
perfectionism and, 170–174  
physiology of, 205–213, 210–211  
quality of life and, 181–186  
thalamus in, 386–387, 386–405  
training, 409–420  
transient hypofrontality and, 165–170  
virtue ethics and, 266–268  
exogenous versus endogenous control of, 30  
expertise and, 17–18  
external focus in movement effectiveness and efficiency, 75–96  
eye movement programming and, 128  
in flow experience, 222–223  
flow proneness and, 207–208  
focused, 182–186  
forced, 298–299, 304  
function of, 121–123  
gap between description and explanation of, 287–288  
grounding in action control, 121–136  
intensity of, 308  
intentional control framework for, 128–134  
involuntary, 298–299  
as key characteristic of flow experience, 306–308  
limited capacity of, 122–123  
meditation improving, 375–377, 417–419  
mental training and, 21  
models of, 221–224  
multiple processing pathways of, 125–127  
organization of, 298  
personality approach to, 298–299  
phenomena of, 322n16  
physiological mechanisms of, 324n29  
postvoluntary, 4, 5, 300–301, 316–318, 323n22  
flow as, 314–318  
persona level in, 15  
psychological approach to, 219, 288–296  
as psychological resource, 180  
in quality of life, 181  
remodeling of, 219–242  
selective, 31, 221–222, 308  
versus diffuse attention, 223–224  
versus diffuse under flow conditions, 223–224  
metaphors for, 224–226  
tasks of, 144–145  
self-regulation and, 6–7  
sensitivity in, 230–232  
shifting to activity level, 312  
shifting toward externalized goals, 384–385  
spatial limitations of, 122  
studies of, 325n31

- attention (cont.)  
 sustained, 31, 236  
 syntax and, 232–234  
 top-down control of, 5  
 training of, 401–403  
 triangular circuit theory of, 12  
 volitional/voluntary, 299, 309–310  
 acts of, 304–305  
 in flow, 318  
 postvoluntary attention transformed to, 316–317  
 transition to involuntary, 301, 305  
 transition to involuntary attention, 305
- attention control  
 benefits and perils of, 51–69  
 in category learning, 59–62  
 cognitive aftereffects of, 34–38  
 in correlation perception, 63–64  
 depleting resources, 32–34  
 executive attention in, 51  
 forms of, 31  
 glucose levels and, 47  
 interpersonal consequences of, 38–40  
 in language learning, 62–63  
 physiological consequences of, 42–44  
 in problem solving, 52–59  
 resources need for, 46–47  
 rule-based and associative processing in, 65–68  
 self-control undermining, 44–46  
 task persistence and, 40–42  
 undermining problem solving, 64–65  
 undermining subsequent self-control, 34–44  
 working memory and, 51–52
- attention-control video task, 32–36
- attention deficit/hyperactivity disorder,  
 attention training and, 416–417
- Attention Network Test (ANT), 412–413
- genetics and experience effects on, 413–414
- meditation and performance on, 417
- attention substitution, 239, 240
- attention training, 21  
 in children, 415–417
- attentional bias, action-induced, 131–133
- attentional focus  
 in automaticity, 88–91  
 EMG activity as function of, 81–87  
 explanations of, 92–93  
 external, 76–80  
 external and internal determinants of, 29–30  
 internal, 76–80  
 motor system effects of, 85  
 movement effectiveness and, 77–78  
 movement efficiency and, 78–81  
 self-control in, 30–32  
 in skilled performance speed, 91–92  
 visual information in, 92–93
- attentional processing pathways, 125–127
- attentional systems, 121
- dorsal and ventral, 376  
 in processing reality, 377–378
- attentiveness  
 dorsal-ventral cortical systems of, 374–375  
 goal of, 304–305  
 meditative training and, 374  
 state of, 310
- attunement, 250
- Austin, James, 14, 19
- automaticity  
 in conscious control, 251–252  
 in daily life, 186  
 versus effortful action, 410  
 in expertise, 209  
 external attentional focus in, 88–91  
 felt effort and, 354–357  
 know-how and, 250–251  
 in movement control, 87–88  
 versus objectivist reasoning model, 252–254
- processes of, 144  
 research on, 15–17  
 response inhibition level in, 7–8  
 social, 17  
 in social coordination, 352–353
- autonomy  
 in Confucian virtue ethics, 269–273  
 context-level support of, 198–199  
 ethics of, 264

- autopoiesis, 19  
autotelic experience, 1–4  
attention within, 305–318  
in decision making, 8  
definition of, 5  
enjoyment and, 312  
in flow, 205  
mechanisms of, 159–160  
autotelic personality, 206  
aversion learning, colocalization of, 113  
awakened states, 373  
awareness  
attention and, 355–357  
cognitive schemas and, 326n36  
function of, 150–153  
implicit versus deliberate cognitive control  
and, 141–153
- Background, 249  
balance, learning  
attentional focus in, 87–88  
external focus in, 88–91  
balance tasks, 78  
ballistic thought, 233  
Bargh et al. elderly stereotype study, 337–338  
Bargh, John, 16, 17, 144, 250–251
