 thinking as, 2
- Symbol-processing approach, 9, 18, 28, 58–59, 61, 135. *See also specific topics*
- Symbol types, contexts in which cognitive science needs to quantify over, 145–146
- Symbolic MOPs, 136
- Symbolic processing, 55, 56, 61, 118
- Symbolicism, 5, 20, 52, 59–61
- Symbols, 92–94. *See also Individuation; specific topics*  
 algorithmic theory of (*see* Algorithmic view)  
 causal powers, 104n  
 as causally efficacious, 95–96  
 computational role approaches, 104–109  
 individuated algorithmically, 231  
 intentionality/aboutness of, 14  
 “locking” relationship between referents and, 14–15, 96, 173, 174  
 LOT hypothesis and, 6–7  
 nature of, 2, 14  
 orthographic or type-identity proposals, 101–104  
 roles for, 92–99
- Syntactic properties, 67–68, 98
- Syntax, 116  
 combinatorial, 11, 12  
 context insensitivity and, 67–70
- Systematicity, 10
- Theory-based mechanisms, 173
- Theory theory (of concepts), 169–170
- Token manipulation game, 114
- Total computational-role accounts, 104. *See also* Computational role, total
- Turing, Alan, 8, 101
- Twin Earth thought experiment, 94, 130, 192, 198, 199
- “Two factor” theories of concepts, 174, 175
- Type-identity theory, 101–104
- Type individuation, 68–69, 80, 101, 104–105  
 of primitive symbols, 68

- of primitive vocabulary items,  
67–68
- Visuospatial scratchpad, 141
- Vocabulary items in LOT, classifica-  
tory schemes for, 115
- Weak Cartesianism (WC), 163,  
231
- Wide meaning, 202
- Working memory (WM), 141
- “Workspace,” 43. *See also* Global  
workspace (GW) theory
- Workspace neurons, 43
- Workspace node, 57n
