Contents

I	Framework for Thinking About AI and Robotics	1
1	<i>What Are Intelligent Robots?</i>	3
1.1	Overview	3
1.2	Definition: What Is an Intelligent Robot?	4
1.3	What Are the Components of a Robot?	7
1.4	Three Modalities: What Are the Kinds of Robots?	8
1.5	Motivation: Why Robots?	11
1.6	Seven Areas of AI: Why Intelligence?	13
1.7	Summary	15
1.8	Exercises	16
1.9	End Notes	17
2	<i>A Brief History of AI Robotics</i>	19
2.1	Overview	19
2.2	Robots as Tools, Agents, or Joint Cognitive Systems	20
2.3	World War II and the Nuclear Industry	21
2.4	Industrial Manipulators	24
2.5	Mobile Robots	29
2.6	Drones	35
2.7	The Move to Joint Cognitive Systems	36
2.8	Summary	37
2.9	Exercises	38
2.10	End Notes	38
3	<i>Automation and Autonomy</i>	41
3.1	Overview	41
3.2	The Four Sliders of Autonomous Capabilities	43
3.2.1	Plans: Generation versus Execution	44
3.2.2	Actions: Deterministic versus Non-deterministic	44

3.2.3	Models: Open- versus Closed-World	46
3.2.4	Knowledge Representation: Symbols versus Signals	48
3.3	Bounded Rationality	48
3.4	Impact of Automation and Autonomy	49
3.5	Impact on Programming Style	50
3.6	Impact on Hardware Design	50
3.7	Impact on Types of Functional Failures	52
3.7.1	Functional Failures	52
3.7.2	Impact on Types of Human Error	53
3.8	Trade-Spaces in Adding Autonomous Capabilities	55
3.9	Summary	57
3.10	Exercises	59
3.11	End Notes	61
4	<i>Software Organization of Autonomy</i>	63
4.1	Overview	64
4.2	The Three Types of Software Architectures	65
4.2.1	Types of Architectures	66
4.2.2	Architectures Reinforce Good Software Engineering Principles	67
4.3	Canonical AI Robotics Operational Architecture	68
4.3.1	Attributes for Describing Layers	68
4.3.2	The Reactive Layer	70
4.3.3	The Deliberative Layer	71
4.3.4	The Interactive Layer	74
4.3.5	Canonical Operational Architecture Diagram	75
4.4	Other Operational Architectures	75
4.4.1	Levels of Automation	76
4.4.2	Autonomous Control Levels (ACL)	78
4.4.3	Levels of Initiative	80
4.5	Five Subsystems in Systems Architectures	82
4.6	Three Systems Architecture Paradigms	85
4.6.1	Trait 1: Interaction Between Primitives	85
4.6.2	Trait 2: Sensing Route	87
4.6.3	Hierarchical Systems Architecture Paradigm	89
4.6.4	Reactive Systems Paradigm	91
4.6.5	Hybrid Deliberative/Reactive Systems Paradigm	93
4.7	Execution Approval and Task Execution	95
4.8	Summary	97
4.9	Exercises	100
4.10	End Notes	101

5	<i>Telesystems</i>	103
5.1	Overview	104
5.2	Taskable Agency versus Remote Presence	105
5.3	The Seven Components of a Telesystem	105
5.4	Human Supervisory Control	108
5.4.1	Types of Supervisory Control	109
5.4.2	Human Supervisory Control for Telesystems	110
5.4.3	Manual Control	111
5.4.4	Traded Control	113
5.4.5	Shared Control	114
5.4.6	Guarded Motion	114
5.5	Human Factors	116
5.5.1	Cognitive Fatigue	117
5.5.2	Latency	118
5.5.3	Human: Robot Ratio	118
5.5.4	Human Out-of-the-Loop Control Problem	120
5.6	Guidelines for Determining if a Telesystem Is Suitable for an Application	122
5.6.1	Examples of Telesystems	123
5.7	Summary	125
5.8	Exercises	126
5.9	End Notes	128

II Reactive Functionality 129

6	<i>Behaviors</i>	131
6.1	Overview	131
6.2	Motivation for Exploring Animal Behaviors	132
6.3	Agency and Marr's Computational Theory	134
6.4	Example of Computational Theory: Rana Computatrix	137
6.5	Animal Behaviors	141
6.5.1	Reflexive Behaviors	142
6.6	Schema Theory	143
6.6.1	Schemas as Objects	143
6.6.2	Behaviors and Schema Theory	144
6.6.3	S-R: Schema Notation	146
6.7	Summary	148
6.8	Exercises	150
6.9	End Notes	151

7	<i>Perception and Behaviors</i>	153
7.1	Overview	153
7.2	Action-Perception Cycle	155
7.3	Gibson: Ecological Approach	156
7.3.1	Optic Flow	158
7.3.2	Nonvisual Affordances	159
7.4	Two Perceptual Systems	161
7.5	Innate Releasing Mechanisms	162
7.5.1	Definition of Innate Releasing Mechanisms	165
7.5.2	Concurrent Behaviors	170
7.6	Two Functions of Perception	171
7.7	Example: Cockroach Hiding	171
7.7.1	Decomposition	171
7.7.2	Identifying Releasers	172
7.7.3	Implicit versus Explicit Sequencing	176
7.7.4	Perception	177
7.7.5	Architectural Considerations	178
7.8	Summary	178
7.9	Exercises	181
7.10	End Notes	182
8	<i>Behavioral Coordination</i>	185
8.1	Overview	185
8.2	Coordination Function	186
8.3	Cooperating Methods: Potential Fields	188
8.3.1	Visualizing Potential Fields	188
8.3.2	Magnitude Profiles	191
8.3.3	Potential Fields and Perception	194
8.3.4	Programming a Single Potential Field	194
8.3.5	Combination of Fields and Behaviors	196
8.3.6	Example Using One Behavior per Sensor	199
8.3.7	Advantages and Disadvantages	202
8.4	Competing Methods: Subsumption	204
8.4.1	Example	206
8.5	Sequences: Finite State Automata	213
8.5.1	A Follow the Road FSA	213
8.5.2	A Pick Up the Trash FSA	217
8.6	Sequences: Scripts	220
8.7	AI and Behavior Coordination	222
8.8	Summary	223
8.9	Exercises	224
8.10	End Notes	226

9	<i>Locomotion</i>	229
9.1	Overview	229
9.2	Mechanical Locomotion	230
9.2.1	Holonomic versus Nonholonomic	231
9.2.2	Steering	231
9.3	Biomimetic Locomotion	235
9.4	Legged Locomotion	238
9.4.1	Number of Leg Events	239
9.4.2	Balance	240
9.4.3	Gaits	243
9.4.4	Legs with Joints	243
9.5	Action Selection	245
9.6	Summary	246
9.7	Exercises	247
9.8	End Notes	249
10	<i>Sensors and Sensing</i>	251
10.1	Overview	252
10.2	Sensor and Sensing Model	253
10.2.1	Sensors: Active or Passive	254
10.2.2	Sensors: Types of Output and Usage	255
10.3	Odometry, Inertial Navigation System (INS) and Global Positioning System (GPS)	255
10.4	Proximity Sensors	256
10.5	Computer Vision	258
10.5.1	Computer Vision Definition	258
10.5.2	Grayscale and Color Representation	259
10.5.3	Region Segmentation	264
10.5.4	Color Histogramming	267
10.6	Choosing Sensors and Sensing	269
10.6.1	Logical Sensors	269
10.6.2	Behavioral Sensor Fusion	271
10.6.3	Designing a Sensor Suite	274
10.7	Summary	278
10.8	Exercises	280
10.9	End Notes	283
11	<i>Range Sensing</i>	285
11.1	Overview	285
11.2	Stereo	288
11.3	Depth from X	293
11.4	Sonar or Ultrasonics	293

11.4.1	Light Stripers	300
11.4.2	Lidar	302
11.4.3	RGB-D Cameras	304
11.4.4	Point Clouds	304
11.5	Case Study: Hors d'Oeuvres, Anyone?	307
11.6	Summary	315
11.7	Exercises	315
11.8	End Notes	317

III Deliberative Functionality 319

12 Deliberation 321

12.1	Overview	321
12.2	Strips	323
12.2.1	More Realistic Strips Example	326
12.2.2	Strips Summary	331
12.2.3	Revisiting the Closed-World Assumption and the Frame Problem	332
12.3	Symbol Grounding Problem	333
12.4	Global World Models	335
12.4.1	Local Perceptual Spaces	335
12.4.2	Multi-level or Hierarchical World Models	336
12.4.3	Virtual Sensors	338
12.4.4	Global World Model and Deliberation	339
12.5	Nested Hierarchical Controller	339
12.6	RAPS and 3T	342
12.7	Fault Detection Identification and Recovery	346
12.8	Programming Considerations	347
12.9	Summary	348
12.10	Exercises	349
12.11	End Notes	351

13 Navigation 353

13.1	Overview	353
13.2	The Four Questions of Navigation	355
13.3	Spatial Memory	358
13.4	Types of Path Planning	359
13.5	Landmarks and Gateways	361
13.6	Relational Methods	364
13.6.1	Distinctive Places	365
13.6.2	Advantages and Disadvantages	368
13.7	Associative Methods	369

13.8	Case Study of Topological Navigation with a Hybrid Architecture	369
13.8.1	Topological Path Planning	370
13.8.2	Navigation Scripts	375
13.8.3	Lessons Learned	378
13.9	Discussion of Opportunities for AI	379
13.10	Summary	381
13.11	Exercises	382
13.12	End Notes	384
14	<i>Metric Path Planning and Motion Planning</i>	385
14.1	Overview	385
14.2	Four Situations Where Topological Navigation Is Not Sufficient	387
14.3	Configuration Space	389
14.3.1	Meadow Maps	391
14.3.2	Generalized Voronoi Graphs	393
14.3.3	Regular Grids	394
14.3.4	Quadtrees	395
14.4	Metric Path Planning	396
14.4.1	A* and Graph-Based Planners	396
14.4.2	Wavefront-Based Planners	402
14.5	Executing a Planned Path	402
14.5.1	Subgoal Obsession	402
14.5.2	Replanning	404
14.6	Motion Planning	407
14.7	Criteria For Evaluating Path and Motion Planners	410
14.8	Summary	411
14.9	Exercises	413
14.10	End Notes	415
15	<i>Localization, Mapping, and Exploration</i>	417
15.1	Overview	418
15.2	Localization	419
15.3	Feature-Based Localization	421
15.4	Iconic Localization	423
15.5	Static versus Dynamic Environments	424
15.6	Simultaneous Localization and Mapping	424
15.7	Terrain Identification and Mapping	426
15.7.1	Digital Terrain Elevation Maps	427
15.7.2	Terrain Identification	427
15.7.3	Stereophotogrammetry	428
15.8	Scale and Traversability	432
15.8.1	Scale	432
15.8.2	Traversability Attributes	434

15.9	Exploration	435
15.9.1	Reactive Exploration	435
15.9.2	Frontier-Based Exploration	436
15.9.3	Generalized Voronoi Graph Methods	437
15.10	Localization, Mapping, Exploration, and AI	439
15.11	Summary	441
15.12	Exercises	442
15.13	End Notes	443
16	Learning	445
16.1	Overview	446
16.2	Learning	447
16.3	Types of Learning by Example	449
16.4	Common Supervised Learning Algorithms	450
16.4.1	Induction	450
16.4.2	Support Vector Machines	452
16.4.3	Decision Trees	452
16.5	Common Unsupervised Learning Algorithms	454
16.5.1	Clustering	454
16.5.2	Artificial Neural Networks	455
16.6	Reinforcement Learning	460
16.6.1	Utility Functions	461
16.6.2	Q-learning	461
16.6.3	Q-learning Example	464
16.6.4	Q-learning Discussion	468
16.7	Evolutionary Robotics and Genetic Algorithms	468
16.8	Learning and Architecture	473
16.9	Gaps and Opportunities	474
16.10	Summary	475
16.11	Exercises	476
16.12	End Notes	478

IV Interactive Functionality 481

17	MultiRobot Systems (MRS)	483
17.1	Overview	484
17.2	Four Opportunities and Seven Challenges	484
17.2.1	Four Advantages of MRS	485
17.2.2	Seven Challenges in MRS	486
17.3	Multirobot Systems and AI	487
17.4	Designing MRS for Tasks	490
17.4.1	Time Expectations for a Task	490

17.4.2	Subject of Action	491
17.4.3	Movement	492
17.4.4	Dependency	492
17.5	Coordination Dimension of MRS Design	493
17.6	Systems Dimensions in Design	494
17.6.1	Communication	495
17.6.2	MRS Composition	496
17.6.3	Team Size	498
17.7	Five Most Common Occurrences of MRS	499
17.8	Operational Architectures for MRS	501
17.9	Task Allocation	503
17.10	Summary	504
17.11	Exercises	505
17.12	End Notes	508
18	Human-Robot Interaction	511
18.1	Overview	512
18.2	Taxonomy of Interaction	514
18.3	Contributions from HCI, Psychology, Communications	516
18.3.1	Human-Computer Interaction	516
18.3.2	Psychology	517
18.3.3	Communications	518
18.4	User Interfaces	518
18.4.1	Eight Golden Rules for User Interface Design	519
18.4.2	Situation Awareness	522
18.4.3	Multiple Users	525
18.5	Modeling Domains, Users, and Interactions	525
18.5.1	Motivating Example of Users and Interactions	526
18.5.2	Cognitive Task Analysis	528
18.5.3	Cognitive Work Analysis	529
18.6	Natural Language and Naturalistic User Interfaces	531
18.6.1	Natural Language Understanding	531
18.6.2	Semantics and Communication	533
18.6.3	Models of the Inner State of the Agent	534
18.6.4	Multi-modal Communication	535
18.7	Human-Robot Ratio	538
18.8	Trust	540
18.9	Testing and Metrics	542
18.9.1	Data Collection Methods	543
18.9.2	Metrics	545
18.10	Human-Robot Interaction and the Seven Areas of Artificial Intelligence	546

18.11 Summary	547
18.12 Exercises	549
18.13 End Notes	552

V Design and the Ethics of Building

Intelligent Robots 555

19	<i>Designing and Evaluating Autonomous Systems</i>	557
19.1	Overview	557
19.2	Designing a Specific Autonomous Capability	559
19.2.1	Design Philosophy	559
19.2.2	Five Questions for Designing an Autonomous Robot	560
19.3	Case Study: Unmanned Ground Robotics Competition	562
19.4	Taxonomies and Metrics versus System Design	569
19.5	Holistic Evaluation of an Intelligent Robot	571
19.5.1	Failure Taxonomy	572
19.5.2	Four Types of Experiments	573
19.5.3	Data to Collect	575
19.6	Case Study: Concept Experimentation	578
19.7	Summary	581
19.8	Exercises	582
19.9	End Notes	583
20	<i>Ethics</i>	585
20.1	Overview	585
20.2	Types of Ethics	587
20.3	Categorizations of Ethical Agents	588
20.3.1	Moor's Four Categories	588
20.3.2	Categories of Morality	589
20.4	Programming Ethics	590
20.4.1	Approaches from Philosophy	590
20.4.2	Approaches from Robotics	591
20.5	Asimov's Three Laws of Robotics	591
20.5.1	Problems with the Three Laws	592
20.5.2	The Three Laws of Responsible Robotics	592
20.6	Artificial Intelligence and Implementing Ethics	593
20.7	Summary	594
20.8	Exercises	594
20.9	End Notes	595

<i>Bibliography</i>	597
