## Contents

List of Figures ........................................... xi  
List of Research Corners .............................. xiv  
List of Technology Corners ......................... xiv  
Acknowledgments ....................................... xv  

1 Introduction ........................................ 1  
   1.1 Objectives ...................................... 2  
   1.2 Challenges ..................................... 2  
   1.3 Approach ....................................... 4  
   1.4 Intended Readership ......................... 5  
   1.5 Book Structure and Reading Guide ......... 5  

2 An Overview of Multi-Agent Oriented Programming 9  
   2.1 Multi-Agent Systems ......................... 9  
   2.2 Multi-Agent Oriented Programming ....... 12  
   2.3 Main Abstractions ............................ 14  
   2.4 Integrated View ............................... 16  
   2.5 Overcoming Challenges ..................... 18  
   2.6 Wrap-Up ....................................... 22  
   2.7 Bibliographical Notes ....................... 23  

3 Getting Started .................................... 25  
   3.1 Single-Agent Hello-World ................. 26  
   3.2 Multi-Agent Hello-World ................. 27  
   3.3 Hello-World Environment .................. 28  
   3.4 Hello-World Organization ................. 30  
   3.5 Bibliographical Notes ....................... 34  
      Exercises .......................................... 36
4 The Agent Dimension 37
  4.1 Overview 37
  4.2 Agent Abstractions 39
  4.3 Agent Execution 45
  4.4 Bibliographical Notes 49
    Exercises 50

5 The Environment Dimension 51
  5.1 Overview 51
  5.2 Environment Abstractions 53
  5.3 Environment Execution 66
  5.4 Bibliographical Notes 68
    Exercises 69

6 Programming an Agent and Its Environment 71
  6.1 Programming a Proactive Smart Room 71
  6.2 Adding Reactivity to the Smart Room 81
  6.3 Adding Fault Tolerance to the Smart Room 84
  6.4 Making the Smart Room Adaptive 85
  6.5 What We Have Learned 89
    Exercises 89

7 Programming Multiple Agents Interacting in an Environment 91
  7.1 Programming a Smart Room with Multiple Agents 91
  7.2 Decentralizing the Coordination with Interaction Protocols 98
  7.3 Environment-Mediated Coordination 103
  7.4 From Decentralization to Distribution 110
  7.5 What We Have Learned 116
    Exercises 117

8 The Organization Dimension 119
  8.1 Overview 119
  8.2 Organization Abstractions 125
  8.3 Organization Execution 133
  8.4 Bibliographical Notes 141
    Exercises 142

9 Programming Organizations of Situated Agents 143
  9.1 Programming an Organized Smart Room 143
Contents

9.2 Changing the Organization 156
9.3 Agents Deploying Their Organization 158
9.4 Agents Reasoning about Their Organization 160
9.5 What We Have Learned 163
    Exercises 163

10 Integration with Other Technologies 165
    10.1 Libraries, Frameworks, and Platforms 165
    10.2 Mainstream Application Domains and Technologies 174
    10.3 Integration with Other Multi-Agent System Platforms 185

11 Wrap-Up and Perspectives 189
    11.1 The MAOP Viewpoint—Wrap-Up 189
    11.2 MAOP and Artificial Intelligence 191
    11.3 MAOP and Software Engineering 197
    11.4 The Road Ahead 203

Solutions to Exercises 205
