Preface xi

## **1 Introduction: Toward a Computational Approach to Psychiatry 1**

- 1.1 A Brief History of Psychiatry: Clinical Challenges and Treatment Development 1
  - 1.1.1 *Clinical Burden* 1
  - 1.1.2 *Diagnostic Complexity* 1
  - 1.1.3 *Treatment Development* 3
  - 1.1.4 *Toward the Future of Psychiatric Research* 7
- 1.2 Computational Approaches in Neuroscience and Psychiatry 10
  - 1.2.1 *Computational Neuroscience* 10
  - 1.2.2 *Computational Psychiatry* 12
  - 1.2.3 *Data-Driven Approaches* 14
  - 1.2.4 *Theory-Driven Approaches* 14
- 1.3 Structure of the Book 19
- 1.4 Chapter Summary 19
- 1.5 Further Study 20

## **2 Methods of Computational Psychiatry: A Brief Survey 21**

- 2.1 Neural Networks and Circuits Approach 21
  - 2.1.1 *Artificial Neural Network Architectures* 23
  - 2.1.2 *Learning in Feedforward Networks* 23
  - 2.1.3 *Recurrent Networks and Attractor Dynamics* 25
  - 2.1.4 *Application to Psychiatry* 26
  - 2.1.5 *Biological Networks* 27
- 2.2 Drift-Diffusion Models 28
  - 2.2.1 *Optimality and Model Extensions* 30
  - 2.2.2 *Accumulation of Evidence in Biological Neurons* 31
- 2.3 Reinforcement Learning Models 32
  - 2.3.1 *Learning the V or Q Values* 33

2.3.2	<i>Reinforcement Learning in the Brain</i>	35
2.3.3	<i>Evidence for Model-Based and Model-Free Systems</i>	35
2.3.4	<i>Implications for Psychiatry</i>	37
2.4	Bayesian Models and Predictive Coding	39
2.4.1	<i>Uncertainty and the Bayesian Approach</i>	39
2.4.2	<i>Testing Bayesian Predictions Experimentally</i>	40
2.4.3	<i>Decision Theory</i>	41
2.4.4	<i>Heuristics and Approximations: Implementation in the Brain</i>	42
2.4.5	<i>Application to Psychiatry</i>	43
2.4.6	<i>Predictive Coding and Bayesian Models Used in Psychiatry</i>	43
2.5	Model Fitting and Model Comparison	48
2.5.1	<i>Choosing a Suitable Model</i>	48
2.5.2	<i>A Toy Example</i>	50
2.6	Chapter Summary	53
2.7	Further Study	54
<b>3</b>	<b>Biophysically Based Neural Circuit Modeling of Working Memory and Decision Making, and Related Psychiatric Deficits</b>	<b>57</b>
3.1	Introduction	57
3.2	What Is Biophysically Based Neural Circuit Modeling?	59
3.3	Linking Propositions for Cognitive Processes	62
3.4	Attractor Network Models for Core Cognitive Computations in Recurrent Cortical Circuits	66
3.5	Altered Excitation–Inhibition Balance as a Model of Cognitive Deficits	69
3.5.1	<i>Working Memory Models</i>	70
3.5.2	<i>Decision-Making Models</i>	73
3.5.3	<i>State Diagram for the Role of Excitatory/Inhibitory Balance in Cognitive Function</i>	75
3.6	Future Directions	76
3.6.1	<i>Integrating Cognitive Function with Neurophysiological Biomarkers</i>	76
3.6.2	<i>Incorporating Further Neurobiological Detail</i>	78
3.6.3	<i>Informing Task Designs</i>	78
3.6.4	<i>Studying Compensations and Treatments</i>	79
3.6.5	<i>Distributed Cognitive Process in a Large-Scale Brain System</i>	79
3.7	Chapter Summary	80
3.8	Further Study	80
3.9	Acknowledgments	81
<b>4</b>	<b>Computational Models of Cognitive Control: Past and Current Approaches</b>	<b>83</b>
4.1	Introduction	83
4.1.1	<i>The Homunculus Problem of Cognitive Control</i>	84

- 4.1.2 *Why Cognitive Control?* 85
- 4.1.3 *Roadmap to This Chapter* 86
- 4.2 Past and Current Models of Cognitive Control 87
  - 4.2.1 *How Do We Determine When to Actively Maintain versus Rapidly Update Contextual Information in Working Memory?* 87
  - 4.2.2 *How Is the Demand for Cognitive Control Evaluated, and What Is the Computational Role of the Anterior Cingulate Cortex?* 89
  - 4.2.3 *How Do Contextual Representations Guide Action Selection toward Hierarchically Organized Task Goals, and What Is the Computational Role of the Prefrontal Cortex?* 94
  - 4.2.4 *How Are Task Sets Learned during Behavioral Performance, and When Are They Applied to Novel Contexts?* 96
- 4.3 Discussion: Evaluating Models of Cognitive Control 100
  - 4.3.1 *Model Evaluation: Determining Whether a Computational Model Is Useful* 100
  - 4.3.2 *Cognitive Control Impairments in Schizophrenia* 102
- 4.4 Chapter Summary 103
- 4.5 Further Study 104

## **5 The Value of Almost Everything: Models of the Positive and Negative Valence Systems and Their Relevance to Psychiatry 105**

- 5.1 Introduction 105
- 5.2 Utility and Value in Decision Theory 106
  - 5.2.1 *Utility* 106
  - 5.2.2 *Value* 108
- 5.3 Utility and Value in Behavior and the Brain 111
  - 5.3.1 *Utility* 111
  - 5.3.2 *Value* 114
  - 5.3.3 *Evaluation* 114
  - 5.3.4 *Aversive Values and Opponency* 116
  - 5.3.5 *Instrumental and Pavlovian Use of Values* 117
- 5.4 Discussion 119
- 5.5 Chapter Summary 121
- 5.6 Further Study 121
- 5.7 Acknowledgments 122

## **6 Psychosis and Schizophrenia from a Computational Perspective 123**

- 6.1 Introduction 123
- 6.2 Past and Current Computational Approaches 125
  - 6.2.1 *Negative Symptoms* 125
  - 6.2.2 *Positive Symptoms* 126
  - 6.2.3 *Cognitive Symptoms* 132

6.3	Case Study Example: Attractor-like Dynamics in Belief Updating in Schizophrenia	134
6.4	Chapter Summary	143
6.5	Further Study	144
<b>7</b>	<b>Depressive Disorders from a Computational Perspective</b>	<b>145</b>
7.1	Introduction	145
7.2	Cognitive Neuroscience of Depression	146
7.3	Past and Current Computational Approaches	148
7.3.1	<i>Connectionist Models</i>	148
7.3.2	<i>Drift-Diffusion Models</i>	150
7.3.3	<i>Reinforcement Learning Models</i>	152
7.3.4	<i>Bayesian Decision Theory</i>	153
7.4	Case Study: How Does Reward Learning Relate to Anhedonia?	154
7.4.1	<i>Signal-Detection Task</i>	155
7.4.2	<i>A Basic Reinforcement Learning Model</i>	156
7.4.3	<i>Including Uncertainty in the Model</i>	158
7.4.4	<i>Testing More Hypotheses</i>	158
7.4.5	<i>Results</i>	159
7.5	Discussion	160
7.6	Chapter Summary	164
7.7	Further Study	164
<b>8</b>	<b>Anxiety Disorders from a Computational Perspective</b>	<b>165</b>
8.1	Introduction	165
8.2	Past and Current Computational Approaches	167
8.3	Case Study Example: Anxious Individuals Have Difficulty in Learning about the Uncertainty Associated with Negative Outcomes (from Browning et al. 2015)	171
8.3.1	<i>Theoretical Background and Expected and Unexpected Uncertainty</i>	171
8.3.2	<i>Learning as a Rational Combination of New and Old Information</i>	173
8.3.3	<i>Effect of Volatility on Human Learning</i>	175
8.3.4	<i>Summary of Browning et al. (2015) Study</i>	176
8.4	Discussion	180
8.5	Chapter Summary	182
8.6	Further Study	182
<b>9</b>	<b>Addiction from a Computational Perspective</b>	<b>185</b>
9.1	Introduction: What Is Addiction?	185
9.2	Past Approaches	187
9.2.1	<i>Economic Models</i>	187
9.2.2	<i>Homeostatic Models</i>	189

9.2.3	<i>Opponent Process Theory</i>	191
9.2.4	<i>Reinforcement Models</i>	191
9.3	Interacting Multisystem Theories	196
9.3.1	<i>How a Question Is Asked Can Change Which System Controls Behavior</i>	197
9.3.2	<i>Damage to One System Can Drive Behavior to Another</i>	197
9.3.3	<i>There Are Multiple Failure Modes of Each of These Systems and Their Interaction</i>	198
9.4	Implications	199
9.4.1	<i>Drug Use and Addiction Are Different Things</i>	199
9.4.2	<i>Failure Modes</i>	199
9.4.3	<i>Behavioral Addictions</i>	200
9.4.4	<i>Using the Multisystem Model to Treat Patients</i>	201
9.5	Chapter Summary	204
9.6	Further Study	204
<b>10</b>	<b>Tourette Syndrome from a Computational Perspective</b>	<b>205</b>
10.1	Introduction	205
10.1.1	<i>Disorder Definition and Clinical Manifestations</i>	205
10.1.2	<i>Pathophysiology</i>	205
10.1.3	<i>Treatment</i>	214
10.1.4	<i>Contributions of Computational Psychiatry</i>	215
10.2	Past and Current Computational Approaches to Tourette Syndrome	216
10.2.1	<i>Reinforcement Learning in Tourette Syndrome</i>	216
10.2.2	<i>Habits in Tourette Syndrome</i>	217
10.2.3	<i>Data-Driven Automated Diagnosis in Tourette Syndrome</i>	218
10.3	Case Study: An Integrative, Theory-Driven Account of Tourette Syndrome	220
10.3.1	<i>Dopaminergic Hyperinnervation as a Parsimonious Explanation for Neurochemical and Pharmacological Data in Tourette Syndrome</i>	221
10.3.2	<i>The Roles of Phasic and Tonic Dopamine in Tourette Syndrome</i>	221
10.3.3	<i>Premonitory Urges and Tics in Tourette Syndrome: Computational Mechanisms and Neural Correlates</i>	232
10.4	Discussion	240
10.4.1	<i>Strengths of the Proposed Theory-Driven Account: A Unified Account That Explains a Wide Range of Findings in Tourette Syndrome</i>	240
10.4.2	<i>Limitations and Extensions</i>	240
10.5	Chapter Summary	244
10.6	Further Study	245
10.7	Acknowledgments	246
<b>11</b>	<b>Perspectives and Further Study in Computational Psychiatry</b>	<b>247</b>
11.1	Processes and Disorders Not Covered in This Book	247
11.1.1	<i>Autistic Spectrum Disorder</i>	248

11.1.2	<i>Bipolar Disorder</i>	249
11.1.3	<i>Obsessive-Compulsive Disorder</i>	249
11.1.4	<i>Attention-Deficit/Hyperactivity Disorder</i>	250
11.1.5	<i>Post-Traumatic Stress Disorder</i>	250
11.1.6	<i>Personality Disorders</i>	251
11.1.7	<i>Eating Disorders</i>	251
11.2	Data-Driven Approaches	251
11.3	Realizing the Potential of Computational Psychiatry	252
11.4	Chapter Summary	254
	Notes	255
	References	259
	Index	321
