Contents

	Preface	xv
1	**Introduction**	1
	1.1 Intelligence and Embodiment	1
	1.2 A Roboticists' Problem	2
	1.3 Ratslife: An Example of Autonomous Mobile Robotics	3
	1.4 Autonomous Mobile Robots: Some Core Challenges	5
	1.5 Autonomous Manipulation: Some Core Challenges	5
I	**MECHANISMS**	9
2	**Locomotion, Manipulation, and Their Representations**	11
	2.1 Locomotion and Manipulation Examples	11
	2.2 Static and Dynamic Stability	13
	2.3 Degrees of Freedom	14
	2.4 Coordinate Systems and Frames of Reference	18
	2.4.1 Matrix Notation	19
	2.4.2 Mapping from One Frame to Another	21
	2.4.3 Concatenation of Transformations	23
	2.4.4 Other Representations for Orientation	24
3	**Kinematics**	27
	3.1 Forward Kinematics	28
	3.1.1 Forward Kinematics of a Simple Robot Arm	28
	3.1.2 The Denavit-Hartenberg Notation	30
	3.2 Inverse Kinematics	33
	3.2.1 Solvability	33
	3.2.2 Inverse Kinematics of a Simple Manipulator Arm	34

3.3 Differential Kinematics 35
3.3.1 Forward Differential Kinematics 36
3.3.2 Forward Kinematics of a Differential-Wheel Robot 37
3.3.3 Forward Kinematics of Carlike Steering 43
3.4 Inverse Differential Kinematics 44
3.4.1 Inverse Kinematics of Mobile Robots 46
3.4.2 Feedback Control for Mobile Robots 48
3.4.3 Under-actuation and Over-actuation 49

4 Forces 53
4.1 Statics 54
4.2 Kineto-Statics Duality 56
4.3 Manipulability 56
4.3.1 Manipulability Ellipsoid in Velocity Space 56
4.3.2 Manipulability Ellipsoid in Force Space 57
4.3.3 Manipulability Considerations 58

5 Grasping 61
5.1 The Theory of Grasping 61
5.1.1 Friction 62
5.1.2 Multiple Contacts and Deformation 63
5.1.3 Suction 64
5.2 Simple Grasping Mechanisms 65
5.2.1 1-DoF Scissorlike Gripper 65
5.2.2 Parallel Jaw 66
5.2.3 4-Bar Linkage Parallel Gripper 67
5.2.4 Multifingered Hands 68

II SENSING AND ACTUATION 71

6 Actuators 73
6.1 Electric Motors 73
6.1.1 AC and DC Motors 74
6.1.2 Stepper Motor 75
6.1.3 Brushless DC Motor 76
6.1.4 Servo Motor 76
6.1.5 Motor Controllers 77
6.2 Hydraulic and Pneumatic Actuators 77
6.2.1 Hydraulic Actuators 78
6.2.2 Pneumatic Actuators and Soft Robotics 78
6.3 Safety Considerations 79

7 Sensors 81
7.1 Terminology 82
7.1.1 Proprioception versus Exteroception 84
7.2 Sensors That Measure the Robot's Joint Configuration 84
7.3 Sensors That Measure Ego-Motion 85
7.3.1 Accelerometers 85
7.3.2 Gyroscopes 86
7.4 Measuring Force 87
7.4.1 Measuring Pressure or Touch 88
7.5 Sensors to Measure Distance 89
7.5.1 Reflection 89
7.5.2 Phase Shift 90
7.5.3 Time of Flight 91
7.6 Sensors to Sense Global Pose 92

III COMPUTATION 95

8 Vision 97
8.1 Images as Two-Dimensional Signals 97
8.2 From Signals to Information 98
8.3 Basic Image Operations 101
8.3.1 Threshold-Based Operations 101
8.3.2 Convolution-Based Filters 101
8.3.3 Morphological Operations 104
8.4 Extracting Structure from Vision 104
8.5 Computer Vision and Machine Learning 107

9 Feature Extraction 109
9.1 Feature Detection as an Information-Reduction Problem 109
9.2 Features 110
9.3 Line Recognition 111
9.3.1 Line Fitting Using Least Squares 111
9.3.2 Split-and-Merge Algorithm 112
9.3.3 RANSAC: Random Sample and Consensus 113
9.3.4 The Hough Transform 114
9.4 Scale-Invariant Feature Transforms 114
9.4.1 Overview 115
9.4.2 Object Recognition Using Scale-Invariant Features 116
9.5 Feature Detection and Machine Learning 117

10 Artificial Neural Networks 119
10.1 The Simple Perceptron 120
10.1.1 Geometric Interpretation of the Simple Perceptron 121
10.1.2 Training the Simple Perceptron 122
10.2 Activation Functions 123
10.3 From the Simple Perceptron to Multilayer Neural Networks 124
10.3.1 Formal Description of Artificial Neural Networks 124
10.3.2 Training a Multilayer Neural Network 126
10.4 From Single Outputs to Higher Dimensional Data 127
10.5 Objective Functions and Optimization 128
10.5.1 Loss Functions for Regression Tasks 128
10.5.2 Loss Functions for Classification Tasks 129
10.5.3 Binary and Categorical Cross-Entropy 130
10.6 Convolutional Neural Networks 131
10.6.1 From Convolutions to 2D Neural Networks 132
10.6.2 Padding and Striding 133
10.6.3 Pooling 133
10.6.4 Flattening 134
10.6.5 A Sample CNN 134
10.6.6 Convolutional Networks beyond 2D Image Data 135
10.7 Recurrent Neural Networks 135

11 Task Execution 139
11.1 Reactive Control 139
11.1.1 Limitations of Reactive Control 141
11.2 Finite State Machines 143
11.2.1 Implementation 144
11.3 Hierarchical Finite State Machines 145
11.3.1 Implementation 145
11.4 Behavior Trees 147
11.4.1 Node Definition and Status 147
11.4.2 Node Types 148
11.4.3 Behavior Tree Execution 149
11.4.4 Implementation 150
11.5 Mission Planning 150
11.5.1 The General Problem Solver and STRIPS 151

12 Mapping 155
12.1 Map Representations 156
12.2 Iterative Closest Point for Sparse Mapping 157

12.3 Octomap: Dense Mapping of Voxels 160
12.4 RGB-D Mapping: Dense Mapping of Surfaces 160

13 Path Planning 165
13.1 The Configuration Space 165
13.2 Graph-Based Planning Algorithms 166
13.2.1 Dijkstra's Algorithm 166
13.2.2 A* 168
13.3 Sampling-Based Path Planning 169
13.3.1 Rapidly Exploring Random Trees 170
13.4 Planning at Different Length Scales 173
13.5 Coverage Path Planning 175
13.6 Summary and Outlook 175

14 Manipulation 179
14.1 Nonprehensile Manipulation 179
14.2 Choosing the Right Grasp 180
14.2.1 Finding Good Grasps for Simple Grippers 181
14.2.2 Finding Good Grasps for Multifingered Hands 183
14.3 Pick and Place 184
14.4 Peg-in-Hole Problems 185

IV UNCERTAINTY 189

15 Uncertainty and Error Propagation 191
15.1 Uncertainty in Robotics as a Random Variable 191
15.2 Error Propagation 192
15.2.1 Example: Line Fitting 194
15.2.2 Example: Odometry 195
15.3 Optimal Sensor Fusion 196
15.3.1 The Kalman Filter 197

16 Localization 201
16.1 Motivating Example 201
16.2 Markov Localization 203
16.2.1 Perception Update 203
16.2.2 Action Update 204
16.2.3 Example: Markov Localization on a Topological Map 205
16.3 The Bayes Filter 207
16.3.1 Example: Bayes Filter on a Grid 209
16.4 Particle Filter 211

16.5 Extended Kalman Filter 213
16.5.1 Odometry Using the Kalman Filter 214
16.6 Summary: Probabilistic Map-Based Localization 216

17 Simultaneous Localization and Mapping 219
17.1 Introduction 219
17.1.1 Landmarks 220
17.1.2 Special Case I: One Landmark 220
17.1.3 Special Case II: Two Landmarks 221
17.2 The Covariance Matrix 221
17.3 EKF SLAM 222
17.3.1 Algorithm 222
17.3.2 Multiple Sensors 224
17.4 Graph-Based SLAM 225
17.4.1 SLAM as a Maximum-Likelihood Estimation Problem 225
17.4.2 Numerical Techniques for Graph-Based SLAM 228

V APPENDIXES 231

A Trigonometry 233
A.1 Inverse Trigonometry 234
A.2 Trigonometric Identities 234

B Linear Algebra 235
B.1 Dot Product 235
B.2 Cross Product 235
B.3 Matrix Product 236
B.4 Matrix Inversion 236
B.5 Principal Component Analysis 237

C Statistics 239
C.1 Random Variables and Probability Distributions 239
C.1.1 The Normal Distribution 240
C.1.2 Normal Distribution in Two Dimensions 241
C.2 Conditional Probabilities and Bayes' Rule 241
C.3 Sum of Two Random Processes 242
C.4 Linear Combinations of Independent Gaussian Random Variables 242
C.5 Testing Statistical Significance 242
C.5.1 Null Hypothesis on Distributions 243
C.5.2 Testing Whether Two Distributions Are Independent 244
C.5.3 Statistical Significance of True-False Tests 245
C.5.4 Summary 245

D Backpropagation 247
D.1 Backward Propagation of Error 249
D.2 Backpropagation Algorithm 251

E How to Write a Research Paper 253
E.1 Original Research 253
E.2 Hypothesis: Or, What Do We Learn from This Work? 255
E.3 Survey and Tutorial 256
E.4 Writing It Up! 256

F Sample Curricula 257
F.1 An Introduction to Autonomous *Mobile* Robots 257
F.1.1 Overview 257
F.1.2 Content 258
F.1.3 Implementation Suggestions 259
F.2 An Introduction to Robotic Manipulation 260
F.2.1 Overview 260
F.2.2 Content 261
F.2.3 Implementation Suggestions 261
F.3 An Introduction to Robotic Systems 262
F.3.1 Overview 262
F.3.2 Content 262
F.3.3 Implementation Suggestions 263
F.4 Class Debates 263
