Contents

	Preface	ix
	Introduction	xiii
	Agreements	xv
1	**Automata Theory**	1
	1.1 Deterministic finite automata	1
	1.2 Closure properties	8
	1.3 Nondeterministic finite automata	13
	1.4 More closure properties	29
	1.5 Regular expressions	34
	1.6 Proving non-regularity	42
	1.7 Myhill-Nerode theory	48
	1.8 DFA minimization	55
	1.9 Exercises and notes	59
	1.10 Bibliographic discussion	69
2	**Computability Theory**	71
	2.1 Deterministic Turing machines	71
	2.2 Encoding objects as strings	85
	2.3 Universal Turing machines	90
	2.4 A non-CE language	92
	2.5 Closure properties	94
	2.6 Nondeterministic Turing machines	98
	2.7 The robustness of computability	107
	2.8 Reductions	121
	2.9 Rice's theorem	128
	2.10 Exercises and notes	130
	2.11 Bibliographic discussion	139
3	**Complexity Theory**	141
	3.1 Two tales	142
	3.2 Polynomial-time computation	148

3.3 Closure properties 165
3.4 Reductions 169
3.5 NP-completeness 178
3.6 Circuit satisfiability 181
3.7 coNP languages 198
3.8 Further hardness results 202
3.9 Connecting decision and search 243
3.10 Exercises and notes 247
3.11 Bibliographic discussion 273

4 Further Complexity Theory 275
4.1 Space complexity 276
4.2 Hierarchy theorems 291
4.3 Fixed-parameter tractability 297
4.4 Parameterized complexity 315
4.5 Compilability theory 332
4.6 Exercises and notes 342
4.7 Bibliographic discussion 373
