PREFACE

xvii

CHAPTER 01. INTRODUCTION	1
1.1 Literate Programming	1
1.1.1 Indexing and Cross-Referencing	4
1.2 Photorealistic Rendering and the Ray-Tracing Algorithm	5
1.2.1 Cameras and Film	6
1.2.2 Ray–Object Intersections	8
1.2.3 Light Distribution	9
1.2.4 Visibility	11
1.2.5 Light Scattering at Surfaces	11
1.2.6 Indirect Light Transport	13
1.2.7 Ray Propagation	15
1.3 pbrt: System Overview	16
1.3.1 Phases of Execution	17
1.3.2 pbrt’s main() Function	18
1.3.3 Integrator Interface	22
1.3.4 ImageTileIntegrator and the Main Rendering Loop	24
1.3.5 RayIntegrator Implementation	28
1.3.6 Random Walk Integrator	31
1.4 How to Proceed through This Book	36
1.4.1 The Exercises	38
1.4.2 Viewing the Images	38
1.4.3 The Online Edition	38
1.5 Using and Understanding the Code	38
1.5.1 Source Code Organization	39
1.5.2 Naming Conventions	39
1.5.3 Pointer or Reference?	39
1.5.4 Abstraction versus Efficiency	40
1.5.5 pstd	40
1.5.6 Allocators	40
1.5.7 Dynamic Dispatch	41
1.5.8 Code Optimization	42
1.5.9 Debugging and Logging	42
1.5.10 Parallelism and Thread Safety	43
1.5.11 Extending the System	44
1.5.12 Bugs	44
1.6 A Brief History of Physically Based Rendering	44
1.6.1 Research	45
1.6.2 Production	46
Further Reading	48
Exercise	51

CHAPTER 02. MONTE CARLO INTEGRATION	53
2.1 Monte Carlo: Basics	54
2.1.1 Background and Probability Review	54
2.1.2 Expected Values	56
2.1.3 The Monte Carlo Estimator	56
2.1.4 Error in Monte Carlo Estimators	58
2.2 Improving Efficiency	60
2.2.1 Stratified Sampling	60
2.2.2 Importance Sampling	63
2.2.3 Multiple Importance Sampling	65
2.2.4 Russian Roulette	67
2.2.5 Splitting	68
2.3 Sampling Using the Inversion Method	69
2.3.1 Discrete Case	69
2.3.2 Continuous Case	72
2.4 Transforming between Distributions	73
2.4.1 Transformation in Multiple Dimensions	74
2.4.2 Sampling with Multidimensional Transformations	75
Further Reading	77
Exercises	78
CHAPTER 03. GEOMETRY AND TRANSFORMATIONS	81
3.1 Coordinate Systems	81
3.1.1 Coordinate System Handedness	82
3.2 n-Tuple Base Classes	83
3.3 Vectors	86
3.3.1 Normalization and Vector Length	87
3.3.2 Dot and Cross Product	89
3.3.3 Coordinate System from a Vector	91
3.4 Points	92
3.5 Normals	93
3.6 Rays	94
3.6.1 Ray Differentials	96
3.7 Bounding Boxes	97
3.8 Spherical Geometry	103
3.8.1 Solid Angles	103
3.8.2 Spherical Polygons	104
3.8.3 Spherical Parameterizations	106
3.8.4 Bounding Directions	114
3.9 Transformations	118
3.9.1 Homogeneous Coordinates	119
3.9.2 Transform Class Definition	119
3.9.3 Basic Operations	120
3.9.4 Translations	122
3.9.5 Scaling	123
3.9.6 x , y , and z Axis Rotations	124
3.9.7 Rotation around an Arbitrary Axis	125
3.9.8 Rotating One Vector to Another	127
3.9.9 The Look-at Transformation	128

3.10	Applying Transformations	129
3.10.1	Points	130
3.10.2	Vectors	130
3.10.3	Normals	131
3.10.4	Rays	131
3.10.5	Bounding Boxes	132
3.10.6	Composition of Transformations	132
3.10.7	Transformations and Coordinate System Handedness	133
3.10.8	Vector Frames	133
3.10.9	Animating Transformations	135
3.11	Interactions	136
3.11.1	Surface Interaction	138
3.11.2	Medium Interaction	141
	Further Reading	141
	Exercises	143
CHAPTER 04. RADIOMETRY, SPECTRA, AND COLOR		145
4.1	Radiometry	146
4.1.1	Basic Quantities	147
4.1.2	Incident and Exitant Radiance Functions	150
4.1.3	Radiometric Spectral Distributions	152
4.1.4	Luminance and Photometry	152
4.2	Working with Radiometric Integrals	153
4.2.1	Integrals over Projected Solid Angle	154
4.2.2	Integrals over Spherical Coordinates	154
4.2.3	Integrals over Area	155
4.3	Surface Reflection	156
4.3.1	The BRDF and the BTDF	157
4.3.2	The BSSRDF	159
4.4	Light Emission	160
4.4.1	Blackbody Emitters	161
4.4.2	Standard Illuminants	163
4.5	Representing Spectral Distributions	165
4.5.1	Spectrum Interface	165
4.5.2	General Spectral Distributions	166
4.5.3	Embedded Spectral Data	170
4.5.4	Sampled Spectral Distributions	170
4.6	Color	175
4.6.1	XYZ Color	176
4.6.2	RGB Color	180
4.6.3	RGB Color Spaces	182
4.6.4	Why Spectral Rendering?	186
4.6.5	Choosing the Number of Wavelength Samples	187
4.6.6	From RGB to Spectra	189
	Further Reading	200
	Exercises	203
CHAPTER 05. CAMERAS AND FILM		205
5.1	Camera Interface	206
5.1.1	Camera Coordinate Spaces	208

5.1.2	The CameraBase Class	212
5.2	Projective Camera Models	214
5.2.1	Orthographic Camera	216
5.2.2	Perspective Camera	219
5.2.3	The Thin Lens Model and Depth of Field	223
5.3	Spherical Camera	228
5.4	Film and Imaging	230
5.4.1	The Camera Measurement Equation	231
5.4.2	Modeling Sensor Response	232
5.4.3	Filtering Image Samples	242
5.4.4	The Film Interface	244
5.4.5	Common Film Functionality	247
5.4.6	RGBFilm	248
5.4.7	GBufferFilm	253
	Further Reading	254
	Exercises	256
 CHAPTER 06. SHAPES		 261
6.1	Basic Shape Interface	261
6.1.1	Bounding	261
6.1.2	Ray–Bounds Intersections	262
6.1.3	Intersection Tests	265
6.1.4	Intersection Coordinate Spaces	266
6.1.5	Sidedness	267
6.1.6	Area	267
6.1.7	Sampling	267
6.2	Spheres	269
6.2.1	Bounding	272
6.2.2	Intersection Tests	272
6.2.3	Surface Area	279
6.2.4	Sampling	280
6.3	Cylinders	286
6.3.1	Area and Bounding	287
6.3.2	Intersection Tests	288
6.3.3	Sampling	290
6.4	Disks	291
6.4.1	Area and Bounding	293
6.4.2	Intersection Tests	293
6.4.3	Sampling	295
6.5	Triangle Meshes	296
6.5.1	Mesh Representation and Storage	297
6.5.2	Triangle Class	301
6.5.3	Ray–Triangle Intersection	303
*6.5.4	Sampling	313
6.6	Bilinear Patches	326
6.6.1	Intersection Tests	331
6.6.2	Sampling	338

* An asterisk denotes a section with advanced content that can be skipped on a first reading.

* 6.7	Curves	345
	6.7.1 Bounding Curves	348
	6.7.2 Intersection Tests	349
* 6.8	Managing Rounding Error	357
	6.8.1 Floating-Point Arithmetic	358
	6.8.2 Conservative Ray–Bounds Intersections	369
	6.8.3 Accurate Quadratic Discriminants	370
	6.8.4 Robust Triangle Intersections	372
	6.8.5 Bounding Intersection Point Error	373
	6.8.6 Robust Spawned Ray Origins	380
	6.8.7 Avoiding Intersections behind Ray Origins	383
	6.8.8 Discussion	386
	Further Reading	386
	Exercises	390
 CHAPTER 07. PRIMITIVES AND INTERSECTION ACCELERATION		 397
7.1	Primitive Interface and Geometric Primitives	398
	7.1.1 Geometric Primitives	398
	7.1.2 Object Instancing and Primitives in Motion	402
7.2	Aggregates	405
7.3	Bounding Volume Hierarchies	406
	7.3.1 BVH Construction	408
	7.3.2 The Surface Area Heuristic	415
	7.3.3 Linear Bounding Volume Hierarchies	420
	7.3.4 Compact BVH for Traversal	428
	7.3.5 Bounding and Intersection Tests	430
	Further Reading	434
	Exercises	441
 CHAPTER 08. SAMPLING AND RECONSTRUCTION		 445
8.1	Sampling Theory	445
	8.1.1 The Frequency Domain and the Fourier Transform	446
	8.1.2 Ideal Sampling and Reconstruction	449
	8.1.3 Aliasing	452
	8.1.4 Understanding Pixels	454
	8.1.5 Sampling and Aliasing in Rendering	455
	8.1.6 Spectral Analysis of Sampling Patterns	457
8.2	Sampling and Integration	460
	* 8.2.1 Fourier Analysis of Variance	460
	8.2.2 Low Discrepancy and Quasi Monte Carlo	464
8.3	Sampling Interface	467
8.4	Independent Sampler	471
8.5	Stratified Sampler	472
* 8.6	Halton Sampler	477
	8.6.1 Hammersley and Halton Points	477
	8.6.2 Randomization via Scrambling	480
	8.6.3 Halton Sampler Implementation	485
	8.6.4 Evaluation	489

* 8.7	Sobol' Samplers	493
8.7.1	Stratification over Elementary Intervals	495
8.7.2	Randomization and Scrambling	496
8.7.3	Sobol' Sample Generation	498
8.7.4	Global Sobol' Sampler	499
8.7.5	Padded Sobol' Sampler	502
8.7.6	Blue Noise Sobol' Sampler	505
8.7.7	Evaluation	510
8.8	Image Reconstruction	514
8.8.1	Filter Interface	514
8.8.2	FilterSampler	517
8.8.3	Box Filter	518
8.8.4	Triangle Filter	520
8.8.5	Gaussian Filter	521
8.8.6	Mitchell Filter	523
8.8.7	Windowed Sinc Filter	525
	Further Reading	527
	Exercises	532
CHAPTER 09. REFLECTION MODELS		535
9.1	BSDF Representation	537
9.1.1	Geometric Setting and Conventions	537
9.1.2	BxDF Interface	538
9.1.3	Hemispherical Reflectance	541
9.1.4	Delta Distributions in BSDFs	543
9.1.5	BSDFs	543
9.2	Diffuse Reflection	546
9.3	Specular Reflection and Transmission	548
9.3.1	Physical Principles	548
9.3.2	The Index of Refraction	549
9.3.3	The Law of Specular Reflection	550
9.3.4	Snell's Law	552
9.3.5	The Fresnel Equations	556
9.3.6	The Fresnel Equations for Conductors	557
9.4	Conductor BRDF	560
9.5	Dielectric BSDF	563
9.5.1	Thin Dielectric BSDF	566
* 9.5.2	Non-Symmetric Scattering and Refraction	569
9.6	Roughness Using Microfacet Theory	571
9.6.1	The Microfacet Distribution	573
9.6.2	The Masking Function	575
9.6.3	The Masking-Shadowing Function	578
9.6.4	Sampling the Distribution of Visible Normals	579
9.6.5	The Torrance-Sparrow Model	582
9.7	Rough Dielectric BSDF	587
* 9.8	Measured BSDFs	591
9.8.1	Basic Data Structures	598
9.8.2	Evaluation	599
* 9.9	Scattering from Hair	602
9.9.1	Geometry	602

9.9.2	Scattering from Hair	604
9.9.3	Longitudinal Scattering	607
9.9.4	Absorption in Fibers	609
9.9.5	Azimuthal Scattering	613
9.9.6	Scattering Model Evaluation	616
9.9.7	Sampling	618
9.9.8	Hair Absorption Coefficients	620
	Further Reading	621
	Exercises	629
 CHAPTER 10. TEXTURES AND MATERIALS		 633
10.1	Texture Sampling and Antialiasing	634
10.1.1	Finding the Texture Sampling Rate	635
10.1.2	Ray Differentials at Medium Transitions	642
* 10.1.3	Ray Differentials for Specular Reflection and Transmission	643
10.1.4	Filtering Texture Functions	647
10.2	Texture Coordinate Generation	649
10.2.1	(u, v) Mapping	650
10.2.2	Spherical Mapping	651
10.2.3	Cylindrical Mapping	653
10.2.4	Planar Mapping	654
10.2.5	3D Mapping	654
10.3	Texture Interface and Basic Textures	655
10.3.1	Constant Texture	656
10.3.2	Scale Texture	657
10.3.3	Mix Textures	657
10.4	Image Texture	660
10.4.1	Texture Memory Management	662
10.4.2	Image Texture Evaluation	663
10.4.3	MIP Maps	664
10.4.4	Image Map Filtering	667
10.5	Material Interface and Implementations	674
10.5.1	Material Implementations	678
10.5.2	Finding the BSDF at a Surface	682
10.5.3	Normal Mapping	684
10.5.4	Bump Mapping	687
	Further Reading	690
	Exercises	694
 CHAPTER 11. VOLUME SCATTERING		 697
11.1	Volume Scattering Processes	697
11.1.1	Absorption	699
11.1.2	Emission	700
11.1.3	Out Scattering and Attenuation	701
11.1.4	In Scattering	702
11.2	Transmittance	704
11.2.1	Null Scattering	707
11.3	Phase Functions	709
11.3.1	The Henyey–Greenstein Phase Function	711

11.4	Media	714
11.4.1	Medium Interface	717
11.4.2	Homogeneous Medium	720
11.4.3	DDA Majorant Iterator	721
11.4.4	Uniform Grid Medium	728
11.4.5	RGB Grid Medium	731
	Further Reading	734
	Exercises	736
 CHAPTER 12. LIGHT SOURCES		 739
12.1	Light Interface	740
12.1.1	Photometric Light Specification	744
12.1.2	The LightBase Class	744
12.2	Point Lights	746
12.2.1	Spotlights	748
12.2.2	Texture Projection Lights	750
12.2.3	Goniophotometric Diagram Lights	755
12.3	Distant Lights	757
12.4	Area Lights	759
12.5	Infinite Area Lights	764
12.5.1	Uniform Infinite Lights	765
12.5.2	Image Infinite Lights	766
* 12.5.3	Portal Image Infinite Lights	770
12.6	Light Sampling	780
12.6.1	Uniform Light Sampling	782
12.6.2	Power Light Sampler	783
* 12.6.3	BVH Light Sampling	785
	Further Reading	806
	Exercises	810
 CHAPTER 13. LIGHT TRANSPORT I: SURFACE REFLECTION		 813
13.1	The Light Transport Equation	813
13.1.1	Basic Derivation	814
13.1.2	Analytic Solutions to the LTE	815
13.1.3	The Surface Form of the LTE	816
13.1.4	Integral over Paths	817
13.1.5	Delta Distributions in the Integrand	819
13.1.6	Partitioning the Integrand	820
13.2	Path Tracing	821
13.2.1	Overview	822
13.2.2	Path Sampling	822
13.2.3	Incremental Path Construction	824
13.3	A Simple Path Tracer	825
13.4	A Better Path Tracer	830
13.4.1	Path Regularization	841
	Further Reading	843
	Exercises	849

CHAPTER 14. LIGHT TRANSPORT II: VOLUME RENDERING		853
14.1	The Equation of Transfer	853
	14.1.1 Null-Scattering Extension	855
	14.1.2 Evaluating the Equation of Transfer	856
	14.1.3 Sampling the Majorant Transmittance	857
	* 14.1.4 Generalized Path Space	863
	* 14.1.5 Evaluating the Volumetric Path Integral	866
14.2	Volume Scattering Integrators	867
	14.2.1 A Simple Volumetric Integrator	867
	* 14.2.2 Improving the Sampling Techniques	873
	* 14.2.3 Improved Volumetric Integrator	877
14.3	Scattering from Layered Materials	891
	14.3.1 The One-Dimensional Equation of Transfer	892
	14.3.2 Layered BxDF	893
	14.3.3 Coated Diffuse and Coated Conductor Materials	908
	Further Reading	909
	Exercises	914
* CHAPTER 15. WAVEFRONT RENDERING ON GPU		917
15.1	Mapping Path Tracing to the GPU	919
	15.1.1 Basic GPU Architecture	919
	15.1.2 Structuring Rendering Computation	925
	15.1.3 System Overview	926
15.2	Implementation Foundations	928
	15.2.1 Execution and Memory Space Specification	928
	15.2.2 Launching Kernels on the GPU	929
	15.2.3 Structure-of-Arrays Layout	930
	15.2.4 Work Queues	935
15.3	Path Tracer Implementation	938
	15.3.1 Work Launch	940
	15.3.2 The Render() Method	941
	15.3.3 Generating Camera Rays	943
	15.3.4 Loop over Ray Depths	947
	15.3.5 Sample Generation	949
	15.3.6 Intersection Testing	951
	15.3.7 Participating Media	954
	15.3.8 Ray-Found Emission	955
	15.3.9 Surface Scattering	959
	15.3.10 Shadow Rays	969
	15.3.11 Updating the Film	970
	Further Reading	971
	Exercises	973
CHAPTER 16. RETROSPECTIVE AND THE FUTURE		977
16.1	pbrt over the Years	977
16.2	Design Alternatives	979
	16.2.1 Out-of-Core Rendering	979
	16.2.2 Preshaded Micropolygon Grids	980
	16.2.3 Packet Tracing	981

16.2.4	Interactive and Animation Rendering	983
16.2.5	Specialized Compilation	983
16.3	Emerging Topics	984
16.3.1	Inverse and Differentiable Rendering	984
16.3.2	Machine Learning and Rendering	989
16.4	The Future	992
16.5	Conclusion	992
