Preface	xiii
Common Symbols	xvii
I Introduction to Dynamics	1
1 Introduction	3
1.1 Stochastic Dynamics	4
1.1.1 Markov Dynamics	4
1.1.2 Interacting Particle Systems	8
1.1.3 A Model of Segregation	11
1.1.4 A Markov Perspective	14
1.2 Where to From Here?	17
1.2.1 General State Space	17
1.2.2 Forward-Looking Agents	21
1.3 Commentary	22
2 Programming	25
2.1 Algorithms	25
2.1.1 Iteration and Flow Control	26
2.1.2 Application: Bisection	29
2.2 Program Design	30
2.2.1 User-Defined Functions	30
2.2.2 Object-Oriented Programming	34
2.2.3 High Performance Computing	37
3 Analysis in Metric Space	39
3.1 A First Look at Metric Space	39

3.1.1	Distances and Norms	40
3.1.2	Sequences	42
3.1.3	Open Sets, Closed Sets	45
3.2	Further Properties	48
3.2.1	Completeness	48
3.2.2	Compactness	51
3.2.3	Optimization, Equivalence	52
3.2.4	Fixed Points	55
3.3	Commentary	58
4	Introduction to Dynamics	59
4.1	Deterministic Dynamical Systems	59
4.1.1	The Basic Model	59
4.1.2	Global Stability	63
4.1.3	Chaotic Dynamic Systems	66
4.1.4	Equivalent Dynamics and Linearization	68
4.2	Finite State Markov Chains	71
4.2.1	Definition	71
4.2.2	From MCs to SRSs	74
4.2.3	Marginal Distributions	77
4.2.4	Other Identities	79
4.2.5	Constructing Joint Distributions	82
4.3	Stability of Finite State MCs	84
4.3.1	Stationary Distributions	85
4.3.2	The Dobrushin Coefficient	89
4.3.3	Stability	91
4.3.4	The Law of Large Numbers	95
4.4	Commentary	97
5	Further Topics for Finite MCs	99
5.1	Optimization	99
5.1.1	Outline of the Problem	99
5.1.2	Value Iteration	102
5.1.3	Policy Iteration	106
5.2	MCs and SRSs	107
5.2.1	Application: Equilibrium Selection	107
5.2.2	The Coupling Method	110
5.3	Commentary	113

6	Infinite State Space	115
6.1	First Steps	115
6.1.1	Basic Models and Simulation	115
6.1.2	Distribution Dynamics	120
6.1.3	Density Dynamics	122
6.1.4	Stationary Densities: First Pass	128
6.2	Optimal Savings, Infinite State	131
6.2.1	Optimization	131
6.2.2	Fitted Value Iteration	133
6.2.3	Policy Iteration	138
6.3	Stochastic Speculative Price	140
6.3.1	The Model	140
6.3.2	Numerical Solution	145
6.3.3	Equilibria and Optima	147
6.4	Commentary	149
II	Advanced Techniques	153
7	Integration	155
7.1	Measure Theory	155
7.1.1	Lebesgue Measure	155
7.1.2	Measurable Spaces	159
7.1.3	General Measures and Probabilities	162
7.1.4	Existence of Measures	164
7.2	Definition of the Integral	167
7.2.1	Integrating Simple Functions	167
7.2.2	Measurable Functions	170
7.2.3	Integrating Measurable Functions	173
7.3	Properties of the Integral	175
7.3.1	Basic Properties	175
7.3.2	Finishing Touches	177
7.3.3	The Space L_1	180
7.4	Commentary	183
8	Density Markov Chains	185
8.1	Outline	185
8.1.1	Stochastic Density Kernels	186
8.1.2	Connection with SRSs	187
8.1.3	The Markov Operator	193

8.2	Stability	194
8.2.1	The Big Picture	195
8.2.2	Dobrushin Revisited	198
8.2.3	Drift Conditions	202
8.2.4	Applications	205
8.3	Commentary	208
9	Measure-Theoretic Probability	209
9.1	Random Variables	209
9.1.1	Basic Definitions	209
9.1.2	Independence	213
9.1.3	Back to Densities	214
9.2	General State Markov Chains	216
9.2.1	Stochastic Kernels	216
9.2.2	The Fundamental Recursion, Again	221
9.2.3	Expectations	223
9.3	Commentary	225
10	Stochastic Dynamic Programming	227
10.1	Theory	227
10.1.1	Statement of the Problem	227
10.1.2	Optimality	230
10.1.3	Proofs	234
10.2	Numerical Methods	236
10.2.1	Value Iteration	237
10.2.2	Policy Iteration	239
10.2.3	Fitted Value Iteration	242
10.3	Commentary	244
11	Stochastic Dynamics	247
11.1	Notions of Convergence	247
11.1.1	Convergence of Sample Paths	247
11.1.2	Strong Convergence of Measures	252
11.1.3	Weak Convergence of Measures	254
11.2	Stability: Analytical Methods	257
11.2.1	Stationary Distributions	257
11.2.2	Testing for Existence	260
11.2.3	The Dobrushin Coefficient, Measure Case	263
11.2.4	Application: Credit-Constrained Growth	266
11.3	Stability: Probabilistic Methods	271

11.3.1	Coupling with Regeneration	272
11.3.2	Coupling and the Dobrushin Coefficient	276
11.3.3	Stability via Monotonicity	279
11.3.4	More on Monotonicity	283
11.3.5	Further Stability Theory	287
11.4	Commentary	293
12	More Stochastic Dynamic Programming	295
12.1	Monotonicity and Concavity	295
12.1.1	Monotonicity	295
12.1.2	Concavity and Differentiability	299
12.1.3	Wealth Dynamics	302
12.2	Unbounded Rewards	306
12.2.1	Weighted Supremum Norms	306
12.2.2	Results and Applications	308
12.2.3	Proofs	311
12.3	Commentary	313
III	Appendixes	315
A	Real Analysis	317
A.1	The Nuts and Bolts	317
A.1.1	Sets and Logic	317
A.1.2	Functions	320
A.1.3	Basic Probability	324
A.2	The Real Numbers	327
A.2.1	Real Sequences	327
A.2.2	Max, Min, Sup, and Inf	331
A.2.3	Functions of a Real Variable	334
B	Chapter Appendixes	339
B.1	Appendix to Chapter 3	339
B.2	Appendix to Chapter 4	342
B.3	Appendix to Chapter 6	344
B.4	Appendix to Chapter 8	345
B.5	Appendix to Chapter 10	347
B.6	Appendix to Chapter 11	349
B.7	Appendix to Chapter 12	350
	Bibliography	357
