

Figure 6.4 Simple branching fractals: Big-H and Bent-Big-H use the “|” command to draw consecutive segments lengths in a 20:13 ratio, which I found more pleasing to the eye than 2:1. The only difference between Big-H and Bent-Big-H is in the specified angle, which differs by 10 degrees. All of these figures efficiently divide the square plane into a network structure, as found in many biological systems.
