

Contents

Preface	xiii
Glossary of Worked Examples	xv

Part I Introduction and Fundamentals

Chapter 1

Introduction	3
1.1 What Is an Economic Model?	3
1.2 How to Use This Book	14
1.3 Conclusion	15

Chapter 2

Review of the Fundamentals	19
2.1 Sets and Subsets	19
2.2 Numbers	31
2.3 Beginning Topology: Point Sets and Distance in \mathbb{R}^n	39
2.4 Functions	52

Chapter 3

Sequences, Series, and Limits	75
3.1 Definition of a Sequence	75
3.2 Limit of a Sequence	78
3.3 Present-Value Calculations	83
3.4 Properties of Sequences	96
3.5 Series	100

Part II Univariate Calculus and Optimization

Chapter 4

Continuity of Functions	119
4.1 Continuity of a Function of One Variable	119
4.2 Economic Applications of Continuous and Discontinuous Functions	128

Chapter 5

The Derivative and Differential of Functions of One Variable 145

5.1 The Tangent Line and the Derivative 145

5.2 Definition of the Derivative and the Differential 152

5.3 Conditions for Differentiability 160

5.4 Rules of Differentiation 166

5.5 Higher Order Derivatives: Concavity and Convexity of a Function 194

5.6 Taylor Series Formula, Rolle's Theorem, and the Mean-Value Theorem 207

Chapter 6

Optimization of Functions of One Variable 225

6.1 Necessary Conditions for Unconstrained Maxima and Minima 225

6.2 Second-Order Conditions for a Local Optimum 239

6.3 Optimization over an Interval 261

Part III Linear Algebra

Chapter 7

Linear Equations and Vector Spaces 287

7.1 Solving Systems of Linear Equations 287

7.2 Linear Systems in n Variables 2947.3 Vectors in \mathbb{R}^n 305

Chapter 8

Matrices 333

8.1 General Notation 333

8.2 Basic Matrix Operations 338

8.3 Matrix Transposition 352

8.4 Some Special Matrices 357

Chapter 9

Determinants and the Inverse Matrix 365

9.1 Defining the Inverse 365

9.2 Obtaining the Determinant and Inverse of a 3×3 Matrix 3799.3 The Inverse of an $n \times n$ Matrix and Its Properties 384

9.4 Cramer's Rule 390

9.5 Rank of a Matrix 400

Chapter 10

Further Topics in Linear Algebra 407

10.1 The Eigenvalue Problem 407

10.2 Quadratic Forms 421

10.3 Hyperplanes 430

Part IV Multivariate Calculus

Chapter 11

Calculus for Functions of n Variables **443****11.1** Partial Differentiation **443****11.2** Second-Order Partial Derivatives **456****11.3** The First-Order Total Differential **462****11.4** Implicit Differentiation **465****11.5** Curvature Properties: Concavity and Convexity **481****11.6** Quasiconcavity and Quasiconvexity **496****11.7** More Properties of Functions with Economic Applications **501****11.8** Taylor Series Expansion **509**

Chapter 12

Optimization of Functions of n Variables **519****12.1** First-Order Conditions **520****12.2** Second-Order Conditions **530****12.3** Direct Restrictions on Variables **541**

Chapter 13

Constrained Optimization **551****13.1** Constrained Problems and Approaches to Solutions **551****13.2** Second-Order Conditions for Constrained Optimization **573****13.3** Existence, Uniqueness, and Characterization of Solutions **577****13.4** Problems, Problems **586**

Chapter 14

Comparative Statics **597****14.1** Introduction to Comparative Statics **597****14.2** General Comparative Statics Analysis **603****14.3** The Envelope Theorem **623**

Chapter 15

Nonlinear Programming and the Kuhn-Tucker Conditions **635****15.1** The Kuhn-Tucker Conditions **636****15.2** Hyperplane Theorems and Quasiconcavity **655****Part V Integration and Dynamic Methods**

Chapter 16

Integration **681****16.1** The Indefinite Integral **681****16.2** The Riemann (Definite) Integral **689**

16.3	Properties of Integrals	702
16.4	Improper Integrals	710
16.5	Techniques of Integration	720
Chapter 17		
An Introduction to Mathematics for Economic Dynamics		731
17.1	Modeling Time	732
Chapter 18		
Linear, First-Order Difference Equations		743
18.1	Linear, First-Order, Autonomous Difference Equations	743
18.2	The General, Linear, First-Order Difference Equation	756
Chapter 19		
Nonlinear, First-Order Difference Equations		767
19.1	The Phase Diagram and Qualitative Analysis	767
19.2	Cycles and Chaos	774
Chapter 20		
Linear, Second-Order Difference Equations		783
20.1	The Linear, Autonomous, Second-Order Difference Equation	783
20.2	The Linear, Second-Order Difference Equation with a Variable Term	810
Chapter 21		
Linear, First-Order Differential Equations		817
21.1	Autonomous Equations	817
21.2	Nonautonomous Equations	833
Chapter 22		
Nonlinear, First-Order Differential Equations		843
22.1	Autonomous Equations and Qualitative Analysis	843
22.2	Two Special Forms of Nonlinear, First-Order Differential Equations	852
Chapter 23		
Linear, Second-Order Differential Equations		857
23.1	The Linear, Autonomous, Second-Order Differential Equation	857
23.2	The Linear, Second-Order Differential Equation with a Variable Term	876

Chapter 24

Simultaneous Systems of Differential and Difference Equations **885****24.1** Linear Differential Equation Systems **885****24.2** Stability Analysis and Linear Phase Diagrams **907****24.3** Systems of Linear Difference Equations **930**

Chapter 25

Optimal Control Theory **949****25.1** The Maximum Principle **952****25.2** Optimization Problems Involving Discounting **964****25.3** Alternative Boundary Conditions on $x(T)$ **975****25.4** Infinite-Time-Horizon Problems **990****25.5** Constraints on the Control Variable **1003****25.6** Free-Terminal-Time Problems (T Free) **1013**References and Further Reading **1025**Answers **1027**Index **1061**
