

CONTENTS

Preface xiii

Acknowledgments and About the Author xvi

Chapter 1 Energy: Conceptual Foundation and the Laws That Govern Its Transformation 1

- Framework: Setting the Context 2
- Road Map 9
- Emergence of Energy as a Scientific Concept 9
- Energy, Work, and Newton's Laws 12
- Conservation of Energy: Tracking the Flow of Energy 15
- Energy at the Molecular Level: Microscopic and Macroscopic Forms of Energy 18
- Exchange of Kinetic and Potential Energy on a Surface 20
- The Mechanical Equivalent of Heat 22
- Heat and Temperature at the Molecular Level 26
- Energy Transformations: The Central Role of Electromagnetic Radiation 30
- Energy and Power: A Very Important Distinction 38
- Summary of the Core Concepts 38
- Case Studies 43

Chapter 2 Atomic and Molecular Structure: Energy from Chemical Bonds 63

- Framework: Setting the Context 63
- Road Map 71
- Atomic View of Matter 71
- Discovery of the Electron 73
- Discovery of the Atomic Nucleus 75
- Atomic Number, Mass Number, and Atomic Symbol 78
- Isotopes 79
- Molecular Structure 79
- Chemical Formulas 83
- Chemical Formulas and Molecular Models 83
- Stoichiometry 86
- Avogadro's Number 88
- Molar Mass 88
- Balancing Chemical Equations 89
- Oxidation-Reduction Reactions 93
- Oxidation and Reduction in Combustion Reactions 95
- Redox Reactions where Oxygen Is Not Involved 96
- Summary Concepts 97
- Case Studies 101

Chapter 3 Thermochemistry: Development of the First Law of Thermodynamics 129

- Framework: Setting the Context 129
- Road Map 133
- Development of the First Law of Thermodynamics 134
- The Concept of Internal Energy 138
- State Variables in Thermodynamics 139
- Heat and Heat Capacity: How Thermal Energy Transfer (Heat) Is Calculated from Temperature Change 146
- Enthalpy 150
- Standard Enthalpies of Formation 152
- Hess's Law 154
- Pressure-Volume Work and the First Law 156
- Isochoric, Isobaric, and Isothermal Processes 160
- Adiabatic Processes 167
- Phase Changes and the Thermodynamics of Melting, Vaporization, and Sublimation 173
- Summary Concepts 178
- Case Studies 183

Chapter 4	Entropy and the Second Law of Thermodynamics	203
	• Framework: Setting the Context	203
	• Road Map	211
	• Determination of Probability at the Molecular Level	212
	• Entropy	216
	• Boltzmann and the Microscopic Formulation of Entropy	217
	• Qualitative Prediction of Entropy Change: Establishing the Sign of ΔS	221
	• Quantitative Treatment of Entropy: Calculating ΔS for a System	225
	• Joining the Macroscopic and Microscopic: Calculation of Entropy Change, ΔS	230
	• The Second Law of Thermodynamics	231
	• Gibbs Free Energy	232
	• Gibbs Free Energy and Spontaneous Change	233
	• Absolute Value for Entropy: The Third Law of Thermodynamics	236
	• Calculation of Entropy Change for a Chemical Reaction	237
	• Calculation of Gibbs Free Energy for a Reaction	239
	• Summary Concepts	242
	• Case Studies	247
Chapter 5	Equilibria and Free Energy	257
	• Framework: Setting the Context	257
	• Road Map	263
	• The Concept of Chemical Equilibrium	264
	• The Equilibrium Constant	265
	• Determination of a Generalized Expression for K_c from the Specific to the General	269
	• Manipulation of the Equilibrium Constant	270
	• Converting between Concentration Units and Pressure Units	273
	• Stressed Equilibria	275
	• The Principle of Le Chatelier	281
	• Quantitative Determination of Concentrations Following an Impressed Stress on a System at Equilibrium	282
	• Equilibrium Problems Involving Multiple Steps	284
	• Equilibrium Constants, Spontaneous Processes, and Gibbs Free Energy	286
	• Gibbs Free Energy Under Non-standard Conditions	289
	• ΔG° at Temperatures Other than 298 K	292
	• Thermodynamic Equilibrium Constant: Activities	295
	• Assessing Spontaneity for Non-standard Conditions	295
	• ΔG° and K_{eq} as Functions of Temperature	296
	• Gibbs Free Energy: The Maximum Amount of Work That Can Be Extracted from a Chemical Process	298
	• Summary Concepts	299
	• Case Studies	305
Chapter 6	Equilibria in Solution: Acid–Base Control of Life Systems	315
	• Framework: Setting the Context	315
	• Road Map	323
	• Introduction	324
	• The Bonding Structure of Water	324
	• Theory of Acid-Base Reactions	326
	• Equilibria and Free Energy in Acidic Solution	330
	• Solutions That Are Basic: Manipulation of pOH and pK_a	333
	• Neutralization Reactions: The Addition of an Acid to a Base	335
	• Strong Acid Reacting with a Strong Base	336
	• Strong Base Reacting with a Weak Acid	338
	• Buffer Solutions	344
	• Titration Reactions	347
	• Titration of a Weak Acid by a Strong Base	349
	• Titration of a Weak Base by a Strong Acid	351
	• Summary Concepts	353
	• Case Studies	359

Chapter 7 **Electrochemistry: The Union of Gibbs Free Energy, Electron Flow, and Chemical Transformation 379**

- Framework: Setting the Context 379
- Road Map 386
- Free Energy, Electron Flow, and Electrochemistry 387
- The Galvanic or Voltaic Cell 392
- The Half-Cell Reactions 395
- The Standard Hydrogen Electrode 396
- Calculation of the Cell Potential 399
- Active vs. Inactive Electrodes 405
- Notation for an Electrochemical Cell: A Shorthand Technique 407
- Maximum Work from a Cell: Gibbs Free Energy 408
- Link between K_{eq} , G° , and E_{cell}° 411
- Death of an Electrochemical Cell: The Nernst Equation 414
- The Master Diagram 416
- Non-spontaneous Reactions: Driving the Electrochemical Cell Uphill 418
- Corrosion: A Redox Reaction That Causes Problems 422
- Summary Concepts 425
- Case Studies 427

Chapter 8 **Quantum Mechanics, Wave-Particle Duality, and the Single Electron Atom 453**

- Framework: Setting the Context 453
- Road Map 459
- Waves and Particles: From Separation to Union 460
- Einstein, the Photon, and the Union of Planck and the Photoelectric Effect 460
- Momentum of the Photon 466
- Spectroscopy and the Study of Light Emission from Atoms 468
- Bohr Model of the Hydrogen Atom 469
- The de Broglie Wavelength of the Electron 477
- Nature of Waves and the Wave Equation 479
- Particle-in-a-Box: An Important Example 483
- Uncertainty in the Position of the Electron in the Square Well Potential 488
- The Schrödinger Equation 490
- The Hydrogen Atom 493
- Energy Levels of the Hydrogen Atom 495
- Quantum Numbers That Define the Radial and Angular Solutions to the Schrödinger Equation 497
- Physical Interpretation of the Schrödinger Wavefunction $\psi_{n,\ell,m_\ell}(r,\theta,\phi)$ 506
- Summary Concepts 509
- Case Studies 515

Chapter 9 **Quantum Mechanics of Multielectron Systems and the Link Between Orbital Structure and Chemical Reactivity 527**

- Framework: Setting the Context 528
- Road Map 533
- Multielectron Atoms 534
- Penetration, Shielding, and Effective Nuclear Charge, Z_{eff} 537
- Building Up the Periodic Table 540
- Building Up Period 3 542
- Building Up Period 4 544
- Organization of the Periodic Table 546
- Joining Periodic Behavior to Chemical Reactivity 548
- Electron Shielding and Penetration 549
- Periodic Trends in Atomic Size 551
- Periodic Trends in Ionization Energy 554
- Periodic Trends in Electron Affinity 557
- Linking Periodic Trends in IE and EA 559
- Electronegativity: Unify the Concepts of Ionization Energy and Electron Affinity 559
- Trends in the Chemical Behavior of Metals 560
- Summary Concepts 561
- Case Studies 565

- Chapter 10 Theories of Molecular Bonding I: Valence Electron Configuration, Electron Sharing, and Prediction of Molecular Shape 585**
- Framework: Setting the Context 586
 - Road Map 592
 - The Structure of the Molecular Bond 593
 - Types of Chemical Bonds 599
 - Representation of Valence Electrons in a Chemical Bond 602
 - Lewis Structures for Ionic Bonds 604
 - Lattice Energy and the Formation of Ionic Crystals 606
 - Lewis Structures and Covalent Bonding 607
 - Lewis Structures for Covalent Bonds 607
 - Lewis Structures for Single Covalent Bonds: Diatomics 608
 - Lewis Structures for Single Covalent Bonds: Polyatomic Molecules 609
 - Lewis Structures and Bonding Character 611
 - Constructing Lewis Structures For Polyatomic Molecular Compounds 612
 - Method of Formal Charge 617
 - Limitation to the Lewis Theory 618
 - Determination of Molecular Shapes: Valence Shell Electron Pair Repulsion Theory 620
 - Shapes of Molecules: Bond Lengths and Bond Energies 627
 - Summary Concepts 630
 - Case Studies 635
- Chapter 11 Theories of Molecular Bonding II: Quantum Mechanical Based Theories of Covalent Bonding 661**
- Framework: Setting the Context 661
 - Road Map 669
 - Valence Bond Theory: Orbital Overlap and the Name of the Chemical Bond 670
 - Molecular Shape and the Concept of Bond Hybridization 678
 - sp^3 Hybridization and the Structure of Methane 680
 - sp^2 Hybridization and the Formation of σ and π Double Bonds 682
 - sp Hybridization and the Formation of Triple Bonds 684
 - sp^3d and sp^3d^2 Hybrid Orbitals: Trigonal Bipyramidal and Octahedral Geometry 688
 - Molecular Orbital Theory and Electron Delocalization 691
 - Bonding and Antibonding Orbitals 695
 - Molecular Orbital Structure of Molecular Oxygen 699
 - Molecular Orbital Structure and the Potential Energy Structure 701
 - Molecular Orbital Structure of Homonuclear Diatomics 705
 - Molecular Orbital Structure of Heteronuclear Molecules 707
 - Molecular Orbital Theory Applied to Benzene: The Central Role of Delocalization 710
 - Summary Concepts 715
 - Case Studies 719
- Chapter 12 Kinetics: The Principles That Govern the Rate at Which Chemical Reactions Occur 743**
- Framework: Setting the Context 743
 - Road Map 755
 - Kinetics 756
 - Chemical Reactions and Molecular Collisions 757
 - The Overall Reaction vs. the “Elementary Reaction” 760
 - Determination of the Rate of a Chemical Reaction 761
 - Determination of the Reaction Rate Constant 763
 - Reaction Rate Order: Determination of the Effect of Concentration on Reaction Rate 765
 - The Behavior of Zero-Order, First-Order, Second-Order, and Third-Order Kinetics 768
 - Integration of the Rate Law: Defining the Concentration as a Function of Time 772
 - Steady State Approximation 780
 - Arrhenius Expression for Temperature Dependence 784
 - Relating Molecular Motion to the Arrhenius Expression 785
 - Manipulation of the Arrhenius Expression 788
 - Summary Concepts 789
 - Case Studies 795

Chapter 13 Nuclear Chemistry: Energy, Reactors, Imaging, and Radiocarbon Dating 807

- Framework: Setting the Context 807
- Road Map 821
- Elementary Nuclear Particles and Reactions 822
- Nuclear Reactions: Fusion 823
- Nuclear Stability: Binding Energy 824
- Nuclear Reactions: Fission 826
- Radioactive Dating 828

Appendixes 831

- Appendix A: Standard Thermodynamic Values for Selected Substances 831
- Appendix B: Equilibrium Constants for Selected Substances 835
- Appendix C: Standard Electrode (Half-Cell) Potentials 841
- Appendix D: Fundamental Physical Constants, SI Unit Prefixes, Conversions, and Relationships 842
- Appendix E: The Elements (Atomic Numbers and Atomic Masses) 843
- Appendix F: Periodic Table 845

Index 847
